WARNING

Operating, maintaining, and servicing a Stellar product may expose you to chemicals including, but not limited to, engine exhaust, carbon monoxide, phthalates, and lead. These chemicals are known to the State of California to cause cancer and birth defects (or other reproductive harm). To keep your exposure to a minimum, be sure to avoid breathing exhaust and service your Stellar product in a well-ventilated area while wearing gloves or washing your hands frequently. For more information, go to www.P65Warnings.ca.gov/passenger-vehicle.

www.p65warnings.ca.gov

NOTICE

Cold Weather Performance

Although clear data on cold weather performance from every steel manufacturer is not available for all types and thicknesses of steel, Stellar Industries is confident that the weldments on our products will operate to 100% of their intended purpose to temperatures down to -40° F / C.

It is recommended if Stellar manufactured equipment needs to be used in temperatures below -40° F / C, the operator should pull the unit into a climate-controlled area and allow the weldments to warm up to and then maintain a temperature above this level.

Introduction

A copy of this manual is provided with every crane and can be found in the hard plastic manual case that is installed on the chassis. A copy of this manual shall remain with the crane at all times.

Throughout the manual, three signal words will be used to bring attention to important items:

NOTICE

A NOTICE signal word indicates a practice not related to physical injury.

WARNING

A WARNING signal word indicates a hazardous situation which, if not avoided, could result in death or serious injury.

! DANGER

A DANGER signal word indicates a hazardous situation which, if not avoided, will result in death or serious injury.

Information contained within this manual does not cover safety or operation. Please refer to the Container Carrier General Manual for details on these items.

This manual is not binding. Stellar Industries, Inc. reserves the right to change, at any time, any or all of the items, components, and parts deemed necessary for product improvement or commercial/production purposes. This right is kept with no requirement or obligation for immediate mandatory updating of this manual.

If more information is required or technical assistance is needed, or if you feel that any part of this manual is unclear or incorrect, please contact the Stellar Customer Service Department by phone at 800-321-3741 or email at service@stellarindustries.com.

For Technical Questions, Information, Parts, or Warranty, Call Toll-Free at

Container Carrier Nomenclature	2
Container Carrier Specifications	2
Container Carrier Dimensions.....	3

Container Carrier Nomenclature

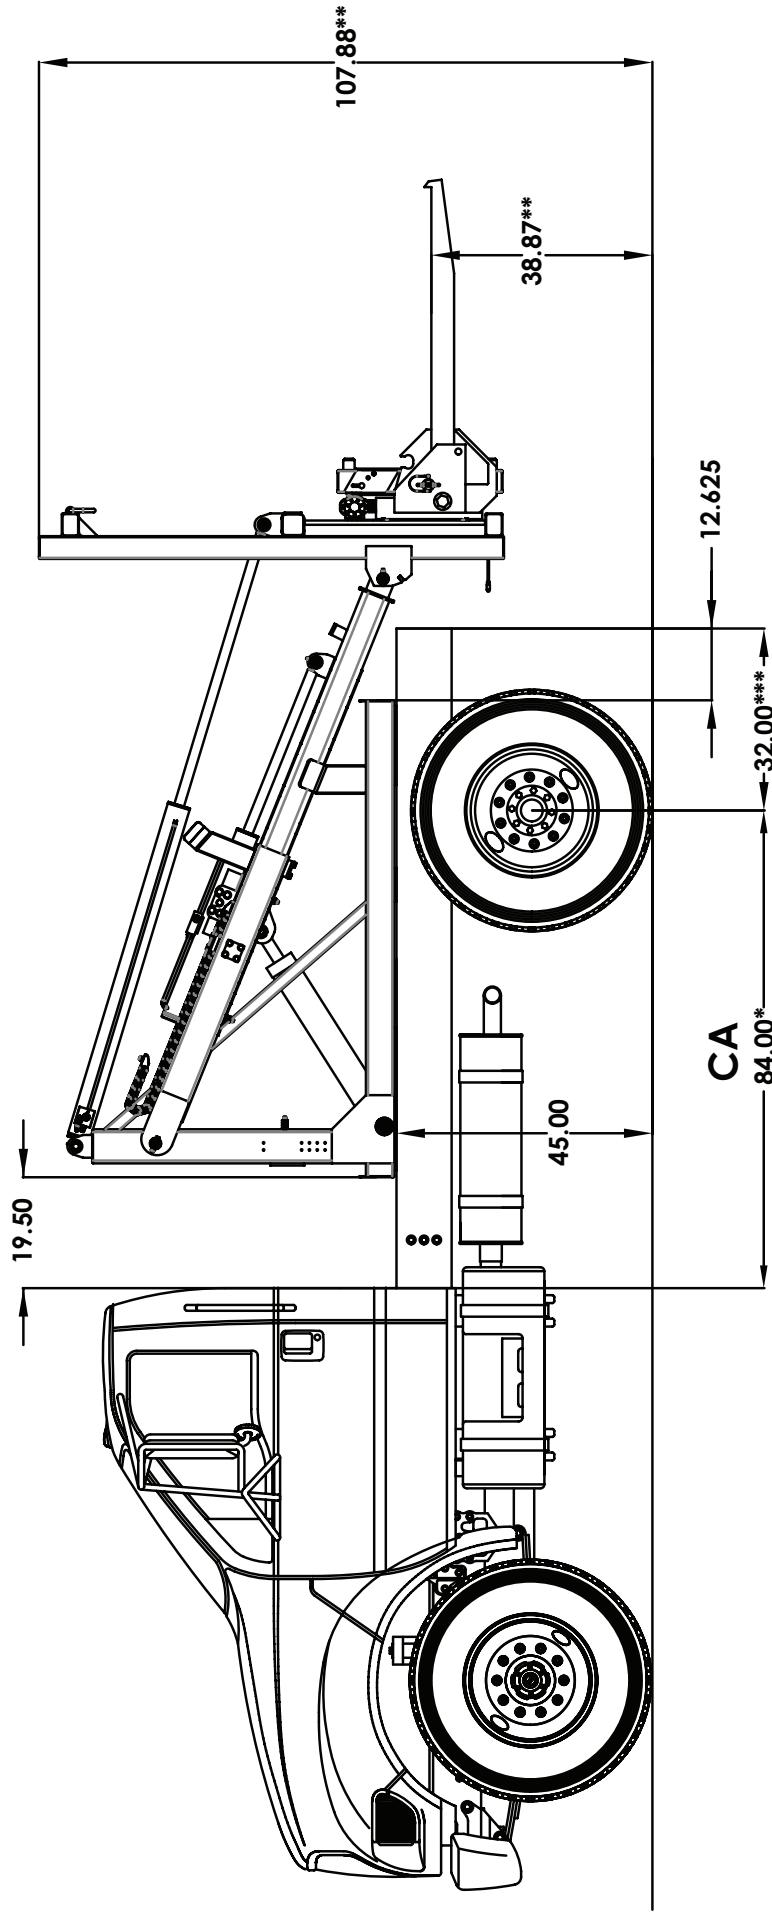

Container Carrier Specifications

Lifting capacity	8,000lbs
Dumping capacity	8,000lbs (4,000lbs on 18.50" Drop Model)
Transporting capacity	8,000lbs (4,000lbs on 18.50" Drop Model)*
Container sizes	2-10yd
Type of containers	Front and rear load
Range of travel	89.45"
Rotation	Worm/Turntable Gear Bearings
Stacking capability	2-8yd
Operating pressure	4,500psi
GPM	12
Hydraulic tank	10 gallon
Recommended CA	84" min.
Controls	Inside and outside
Bushings and grease zerks	All pivot and rotation points
Container bumpers	Molded rubber
Hydraulic pump	Bent-axis piston type
Valve bank	2, 3, and 4 spool cable controlled standard

* Driver responsible for using safe driving practices.

Container Carrier Dimensions

ECCR

* 84"-114" recommended CA. 60" is possible with reduced capacity rating.

** 8.00" drop models subtract 8" from this dimension.

18.50" drop models subtract 18.5" from this dimension.

*** Needs to be 35" when installing on a Ford F750 chassis.

General Installation

This chapter is designed to serve as a general guide for the installation of a Stellar® Container Carrier. Each installation is considered unique so certain portions of this chapter may or may not apply to your direct application. If a question should arise during the installation process, please contact Stellar Customer Service at (800) 321 3741.

PTO and Pump installation instructions are provided by the corresponding manufacturers. For more information on which PTO and Pump fit your application, please contact your local Stellar Distributor or Stellar Customer Service.

WARNING Do not install this container carrier on a chassis not capable of handling the loads imposed on it. Failure to do so may result in serious injury or death.

Container carrier Mounting and Assembly

Study names and locations of the parts and familiarize yourself with the container carrier before starting the assembly . Reading the step-by-step instructions that follow will be helpful.

Assembly

Select an area for assembly that will be large enough to accommodate the completed unit. The surface of the work area should be as level as possible. Use the proper hand tools to ensure proper bolt tightness. Refer to the torque data chart in this chapter for the recommended torque values for different sizes of bolts.

Installer Notice

According to Federal Law (49 cfr part 571), each final-stage manufacturer shall complete the vehicle in such a manner that it conforms to the standards in effect on the date of manufacture of the incomplete vehicle, the date of final completion, or a date between those two dates. This requirement shall, however, be superseded by any conflicting provisions of a standard that applies by its terms to vehicles manufactured in two or more stages.

Therefore, the installer of Stellar® Container carriers is considered one of the manufacturers of the vehicle. As such a manufacturer, the installer is responsible for compliance with all applicable federal and state regulations. They are required to certify that the vehicle is in compliance with the Federal Motor Vehicle Safety Standards and other regulations issued under the National Traffic and Motor Vehicle Safety Act.

Please reference the Code of Federal Regulations, title 49 - Transportation, Volume 5 (400-999), for further information, or visit <http://www.gpoaccess.gov/nara/index.html> for the full text of Code of Federal Regulations.

Torque Data Chart

When using the torque data in the chart, the following rules should be observed:

- Bolt manufacturer's particular specifications should be consulted when provided.
- Flat washers of equal strength must be used.
- All torque measurements are given in foot-pounds. To convert to inch-pounds, multiply by 12.
- Torque values specified are for bolts with residual oils or no special lubricants applied.
- Torque values for socket-head capscrews are the same as for Grade 8 capscrews.

		GRADE 5		GRADE 8		GRADE 9	
Size (DIA-TPI)	Bolt DIA (Inches)	Plain (Ft-Lb)	Plated (Ft-Lb)	Plain (Ft-Lb)	Plated (Ft-Lb)	Plated (Ft-Lb)	
5/16-18	0.3125	17	13	25	18	22	
3/8-16	0.3750	31	23	44	33	39	
7/16-14	0.4375	49	37	70	52	63	
1/2-13	0.5000	75	57	105	80	96	
9/16-12	0.5625	110	82	155	115	139	
5/8-11	0.6250	150	115	220	160	192	
3/4-10	0.7500	265	200	375	280	340	
7/8-9	0.8750	395	295	605	455	549	
1-8	1.0000	590	445	910	680	823	
1 1/8-7	1.1250	795	595	1290	965	1167	
1 1/4-7	1.2500	1120	840	1815	1360	1646	
1 3/8-6	1.3750	1470	1100	2380	1780	2158	
1 1/2-6	1.5000	1950	1460	3160	2370	2865	

- NOTICE** Do not use these values if a different torque value or tightening procedure is given for a specific application. Torque values listed are for general use only. Check tightness of fasteners periodically.
- Shear bolts are designed to fail under predetermined loads. Always replace shear bolts with identical grade.
 - Fasteners should be replaced with the same or higher grade. If higher grade fasteners are used, these should only be tightened to the strength of the original.
 - Tighten plastic insert or crimped steel-type lock nuts to approximately 110 percent of the dry torque values shown in the chart below, applied to the nut, not to the bolt head. Tighten toothed or serrated-type lock nuts to the full torque value. Note: "Lubricated" means coated with a lubricant such as engine oil, or fasteners with phosphate and oil coatings. "Dry" means plain or zinc plated without lubrication. Tighten lubricated bolts to approximately 80% of dry bolts.

Installation Note

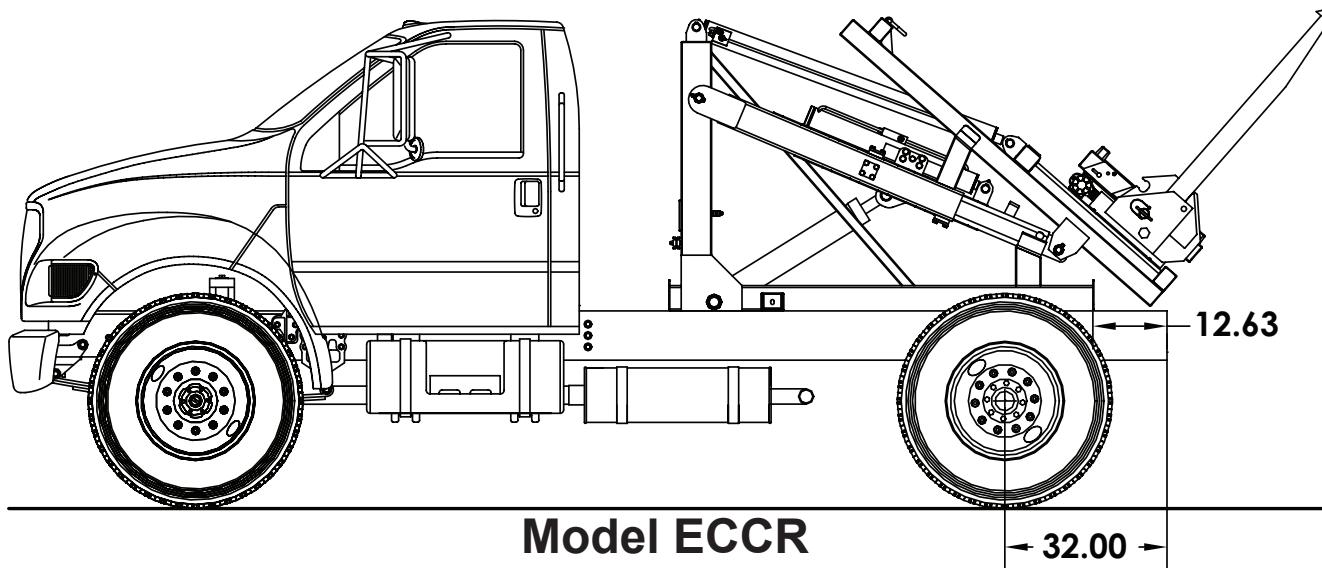

Every container carrier installation is unique. However, certain guidelines exist that apply to every model. Listed below is a general set of chronological steps that may be followed when installing a Stellar Container Carrier. If any questions arise during the installation process, feel free to contact your local dealer or Stellar Customer Service at 800-321-3741.

Step 1: Clear the Truck Frame

- A. Remove any object on top of the truck frame that will interfere with the installation of the Container Carrier.
- B. Remove any temporary lights and mud flaps.

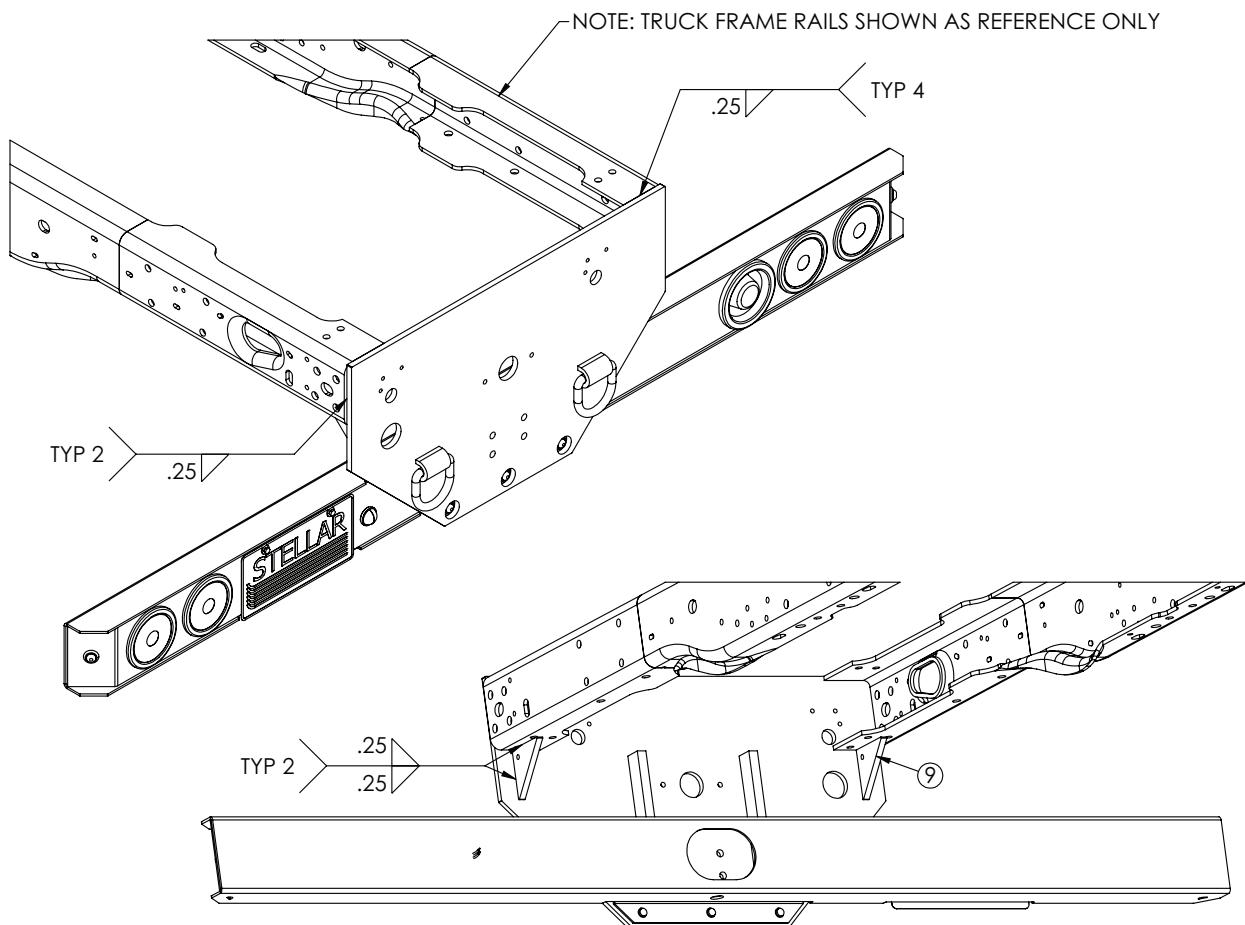

Step 2: Shorten the Truck Frame

- A. Cut the truck frame off a minimum of 1" behind the rear spring shackle.
- B. Make sure not to cut rear of frame off shorter than 32" (35" when installing on Ford F750 Chassis) from center of axle to end of frame.

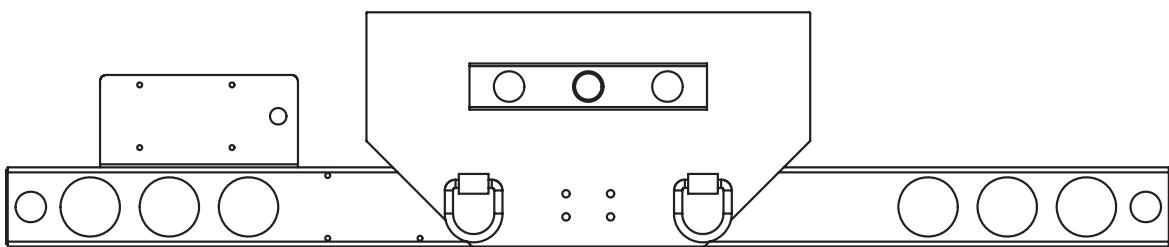

Step 3: Install Bumper

- A. Prep the end of the truck frame so the frame rails have a flat face for the bumper pull plate to mount to.
- B. Clamp bumper pull plate to the end of the truck frame. Once bumper is level and placed correctly, tack weld in place.
- C. Fully weld the bumper pull plate to the outside and inside of the truck frame.

NOTE: PN 112272 IS ONLY REQUIRED WITH TRUCK FRAMES SHORTER THAN 8" IN HEIGHT.

Step 4: Set the Container Carrier on the Truck

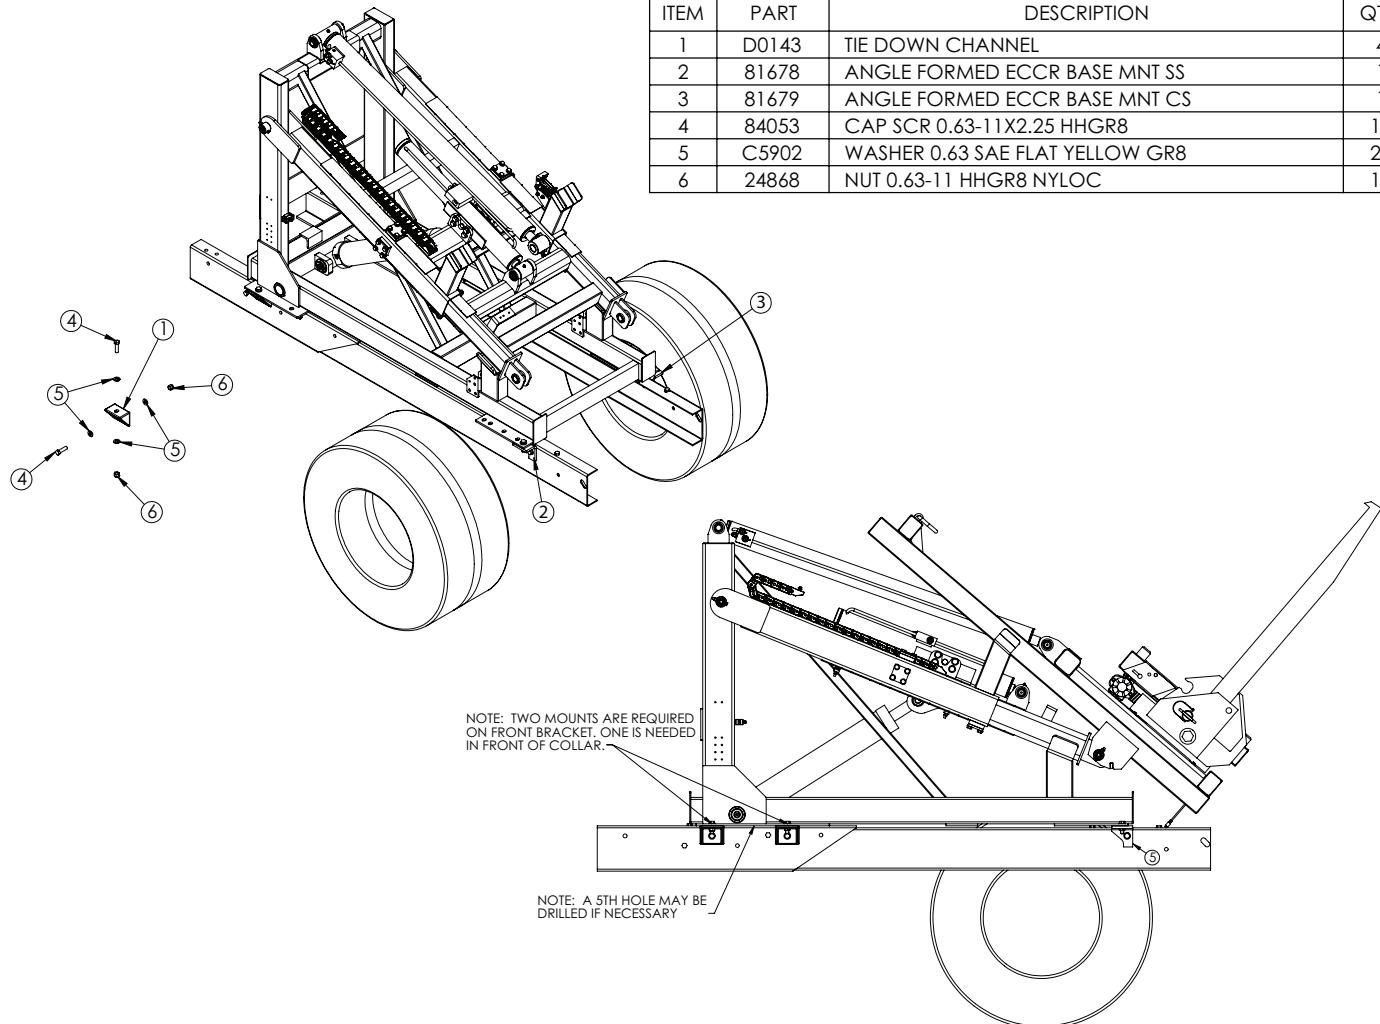

- A. Set the Container Carrier on top of the truck frame. See Mounting Kit below
- B. Container Carrier must set on a level surface. If any object (rivets, cross members, etc.) extend above the top of the truck frame, and cannot be removed, a spacer must be used.
- C. The rear of the ECCR base should be 12.63" from the rear of the truck frame.
- D. Square Container Carrier on the truck. (Note: See drawing in Step 2 of this chapter)

Step 5: Install Tie-Down Castings

- A. Using 5/8" bolts, washers, and nuts, secure the six (4) loose tie down castings and two (2) rear angle brackets to the mounting plates already welded to the Container Carrier base.
- B. Using the castings/brackets as a guide, drill six (6) 11/16" holes through the truck frame.
- C. Fasten the tie down castings to the truck frame using the remaining 5/8" bolts, washers, and nuts.

PN 52296

ITEM	PART	DESCRIPTION	QTY.
1	D0143	TIE DOWN CHANNEL	4
2	81678	ANGLE FORMED ECCR BASE MNT SS	1
3	81679	ANGLE FORMED ECCR BASE MNT CS	1

5	C5902	WASHER 0.63 SAE FLAT YELLOW GR8	24
6	24868	NUT 0.63-11 HHGR8 NYLOC	12

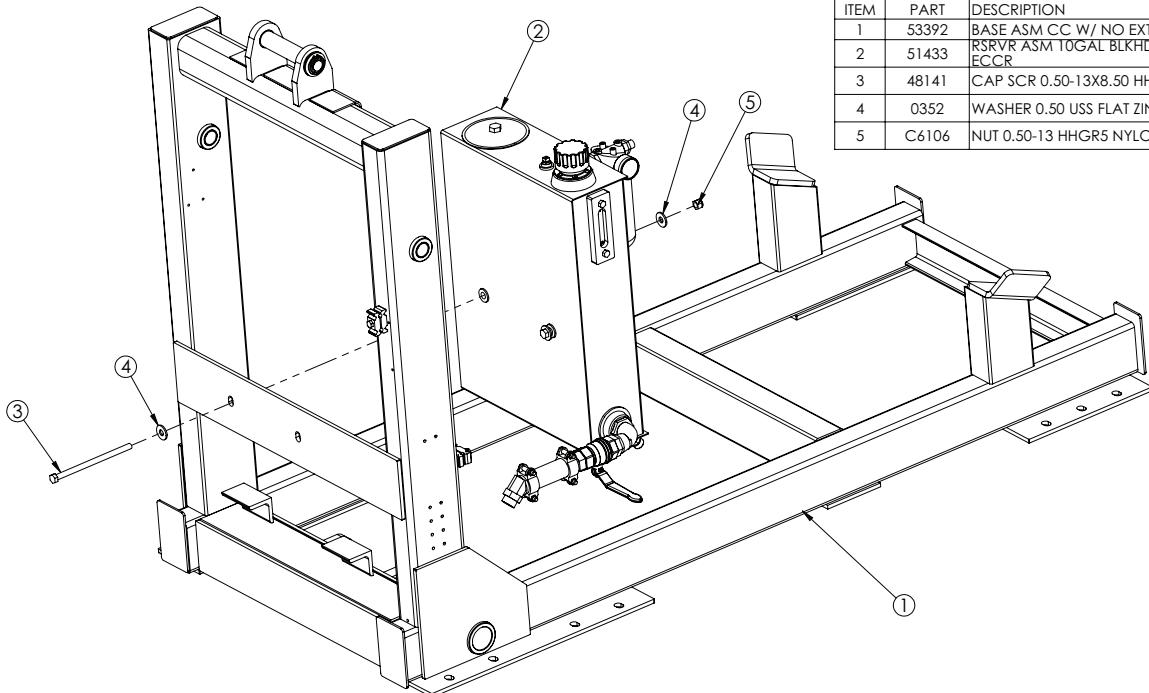

Step 6: Install the PTO and Pump

A. Install the PTO and Pump according to the manufacturer instructions.

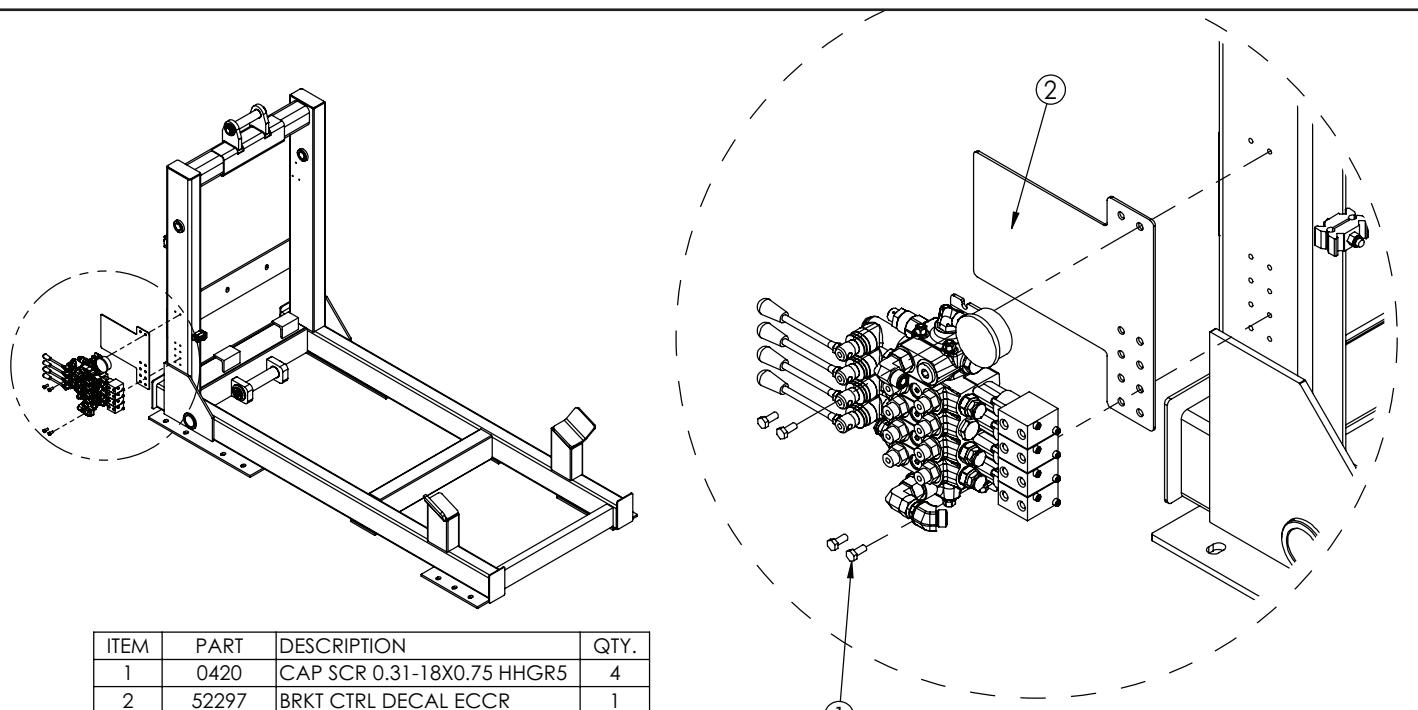

Step 7: Install Reservoir

A. Install the reservoir:

Step 8: Install Valve Bank

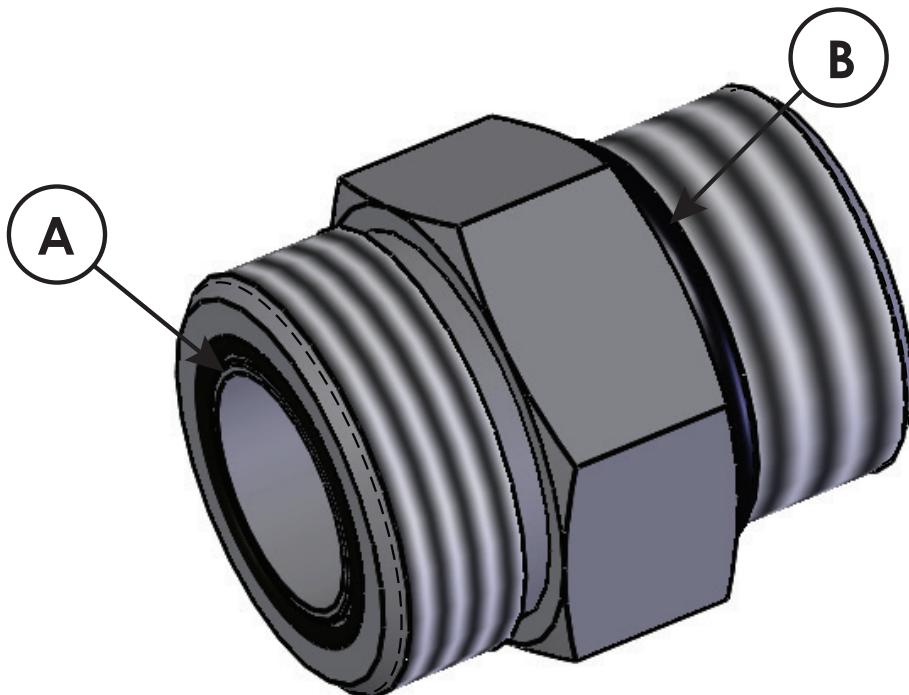

A. Install the valve bank:

Step 9: Route Hydraulics

- A. Connect suction hose to the suction ports on the reservoir and pump. Attach with hose clamps provided.
- B. Connect pressure hose to the pressure port on the pump and the pressure port on the valve bank.

Step 10: Install In-Cab Controls

A. Pre-Assembled Air Control Tower Installation

1. Determine a suitable location which is in a comfortable location for the driver and dnot in the way of the transmission lever.
2. Position the lower bolt holes so that the bolts will miss any cable, wires, or structural members in or under the cab floor.
3. Mark and drill the four (4) .375" diameter holes for the 3/8" cap screws supplied for the tower.
4. Determine a location in the area between the mounting holes to run the air lines.
5. Drill a 2" to 3" diameter hole through the floor of the truck. Remove all burrs and sharp edges. Line the hole with the grommet material supplied.
6. Using the washers on the underside of the floor, attach the tower to the floor with 3/8" cap screws and lock nuts.

After the control tower has been mounted, the air lines can be routed. The air line tubing is color coded as follows:

Blue - Tilt Cylinder Extend
Green - Tilt Cylinder Retract
Orange-Lift Cylinder Extend
Yellow-Lift Cylinder Retract
Red-PTO
Black-Exhaust
Silver-Supply
Black-Rotate Clockwise
Black-Rotate Counter-Clockwise

To remove an air line from a fitting, push the line in, hold the internal sleeve of the fitting, then pull the air line out.

1. Pass the air lines through the hole lined with grommet material in the floor.
2. Route the exhaust air line outside of the truck cab.
3. Determine a suitable route for the air lines to the control valve. Avoid sharp bends, sharp edges, and heat sources.
4. Connect Silver air line to chassis air supply.
5. Install supplied elbow fittings into air actuators.
6. Connect the air lines to the elbow fittings in the air actuators.
7. Bundle the air lines together and secure, out of the way.

Start-up Procedure

1. Charge the air system of the truck. Check all lines for leakage.
2. Operate the controllers and check for correct control valve movement.
3. After the correct connections have been made and the Stellar eqipment completely installed, engage the PTO to check operation.

Install In-Cab Controls Continued...

B. Cable Control Installation

1. Remove the aluminum spring centering block from the valve spool:

2. Screw the threaded hub of the cable assembly all the way through the aluminum spring centering block as shown:

3. Thread the 1/4" jam nut onto the threaded end of the cable:

4. Screw the threaded end of the cable 3 turns into the end of the valve spool:

5. Tighten the jam nut:

6. Rotate the outer cable assembly counter-clockwise to bring the aluminum spring centering block back over the spring:

Install In-Cab Controls Continued...

7. Rotate the cable assembly counter-clockwise until approximately 1 and 1/4" of threads of the hub are showing:

8. Bolt the aluminum spring centering block back onto the valve bank:

9. Run the cable up through the hole in the cab floor and through the control tower. (Note: the cable must be connected to the controller while the controller is outside of the tower.)

10. Remove the bottom bolt from the control handle:

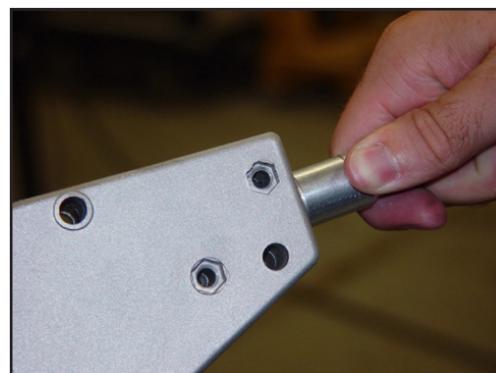

11. Push and hold the control handle so the

threaded receiver is visible. Simultaneously screw the threaded collet of the cable into the receiver of the control handle. If more cable slack is required, move the valve bank handle on the section that you are connecting:

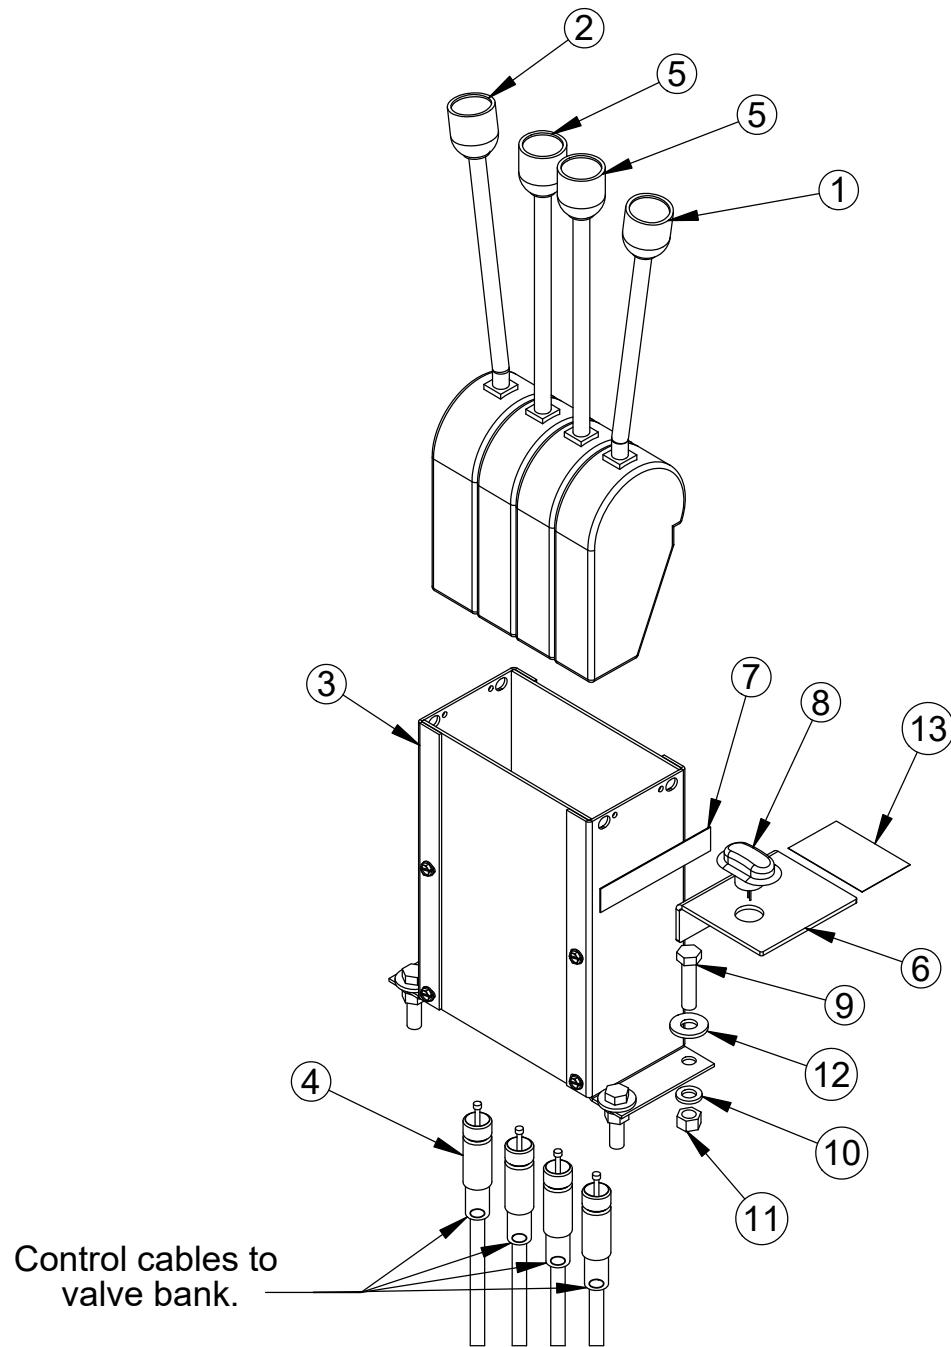

12. Push the cable assembly into the control handle until the groove in the cable end is visible through the bottom hole in handle where the bolt was previously removed. Hold the cable end in place and reinstall the bolt and nut:

13. When complete, the spool and control handle should return to the neutral position when released. If adjustment is needed, the cable must be removed at the controller end and then rotated at the spool end to achieve the proper neutral position.

Step 15: Operate the Container Carrier

- **WARNING** Stellar® Container Carrier operators must conform to the qualifications in the Operation section of this manual. Read and understand all documentation and safety signs before operating or servicing this equipment.
- Bleed the air out of the hydraulic system.
- Check the oil level and add oil if needed.
- Calibrate hoist up light.
- Be sure to check all clearances.
- Set/check relief pressure(See chart and steps on the following page).

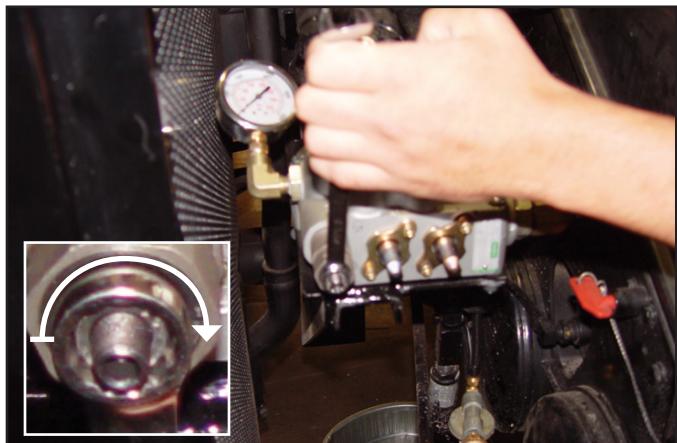

Setting System Relief Pressure

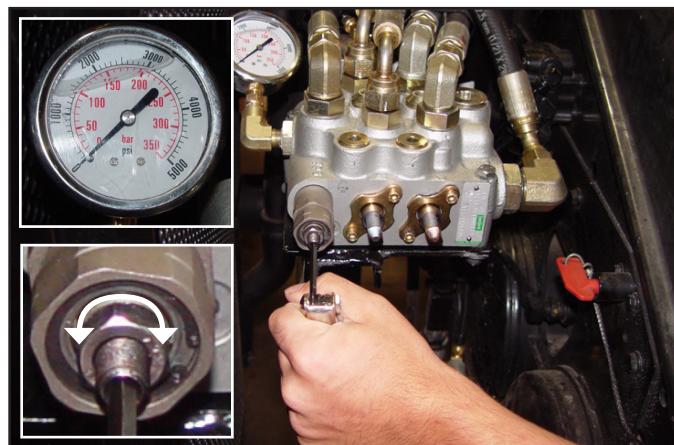

- Engage the PTO. Run the PTO at 1200 RPM.
- Push the control lever labeled 'lift' until the boom bottoms out. Keep pushing the lever forward until the pressure is set.
- Release the jam nut using a 13 mm wrench.

- Once system pressure is set, tighten the jam nut to lock system pressure. Permanent thread lock should not be used:

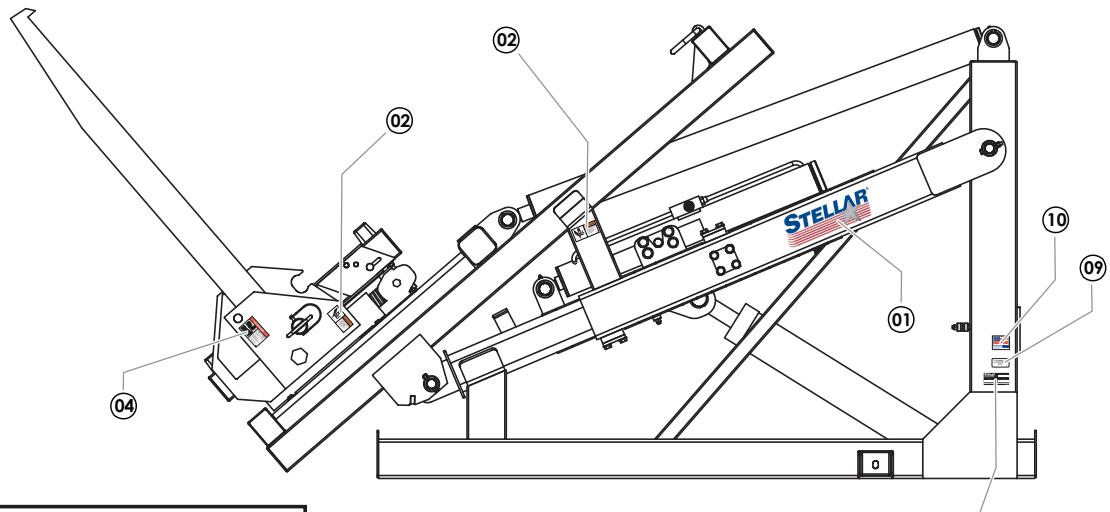

- Adjust the system relief pressure using 4 mm allen wrench. Clockwise increases pressure, counter clockwise decreases pressure:

- Release all functions and disengage the PTO. Snap tamper cap into position over the jam nut. The break away clip will be destroyed if the cap is removed:

Step 16A: Apply Carrier Decals

Last Revision

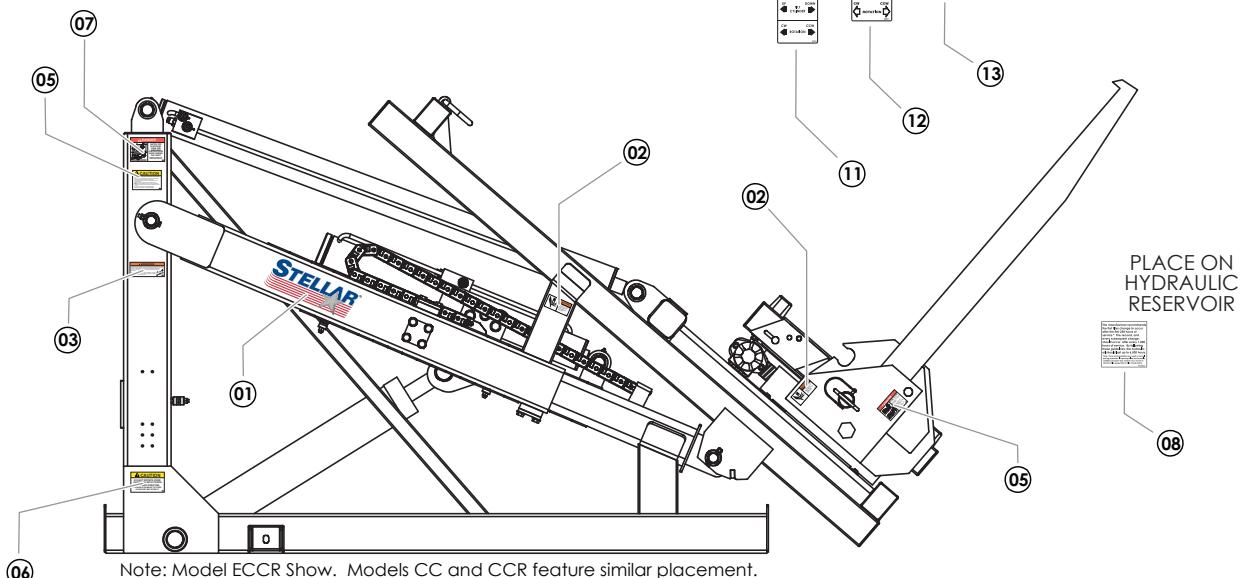

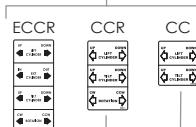

Rev Level: J

Date: 08/16/21

Changes: Separate chassis decals from carrier assembly decals.

SELECT APPROPRIATE
DECAL AND PLACE
NEAR VALVE BANK,
DISCARD THE OTHER TWO

SERIAL PLATE (C5942)
NOT INCLUDED
WITH DECAL KIT

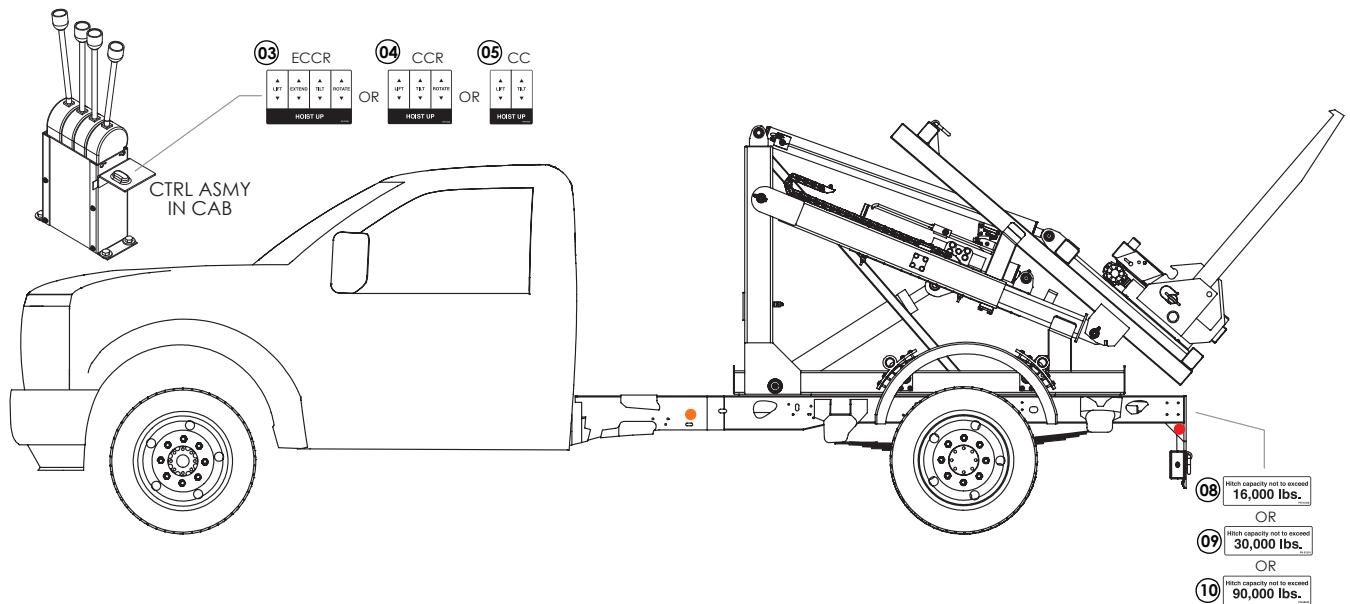

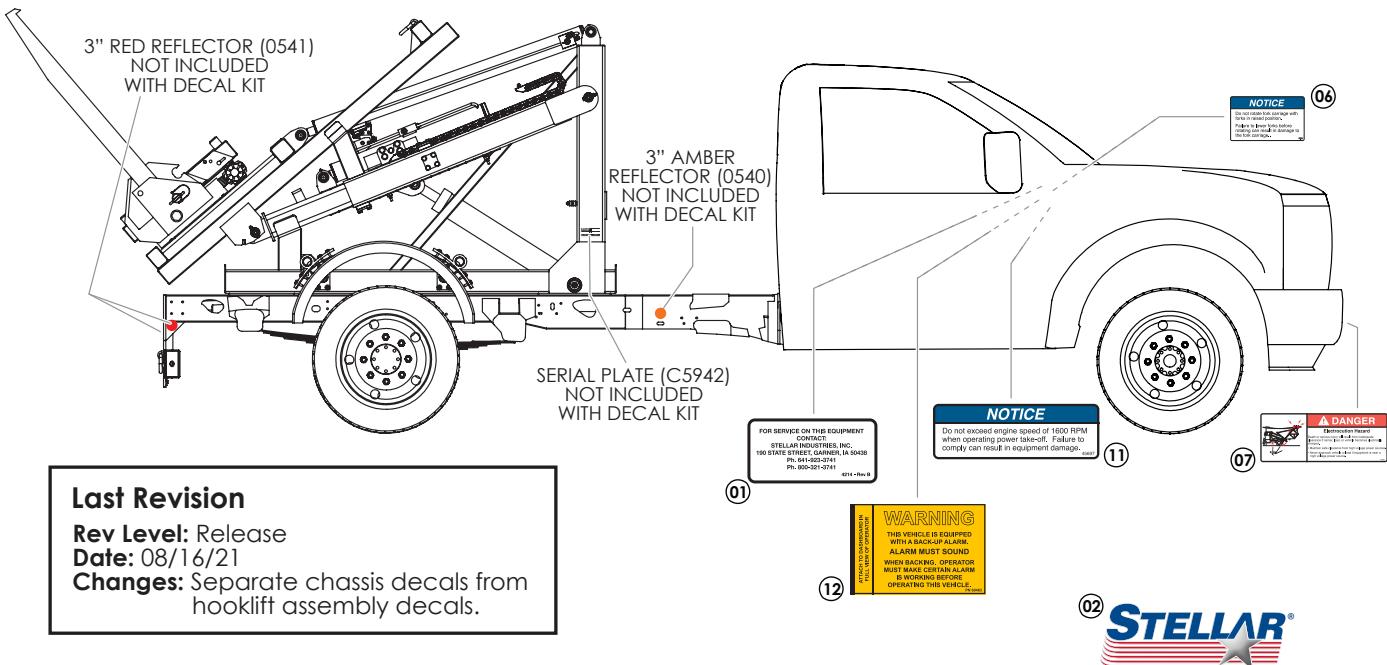

Note: Model ECCR Show. Models CC and CCR feature similar placement.
