Introduction

Stellar Industries® Air Compressors are designed to provide safe and dependable service for a variety of operations. With proper use and maintenance, these air compressors will operate at peak performance for many years.

To promote this longevity, carefully study the information contained in this manual before putting the equipment into service. Though it is not intended to be a training manual for beginners, this manual should provide solid guidelines for the safe and proper usage of the air compressor.

Once you feel comfortable with the material contained in this manual, strive to exercise your knowledge as you safely operate and maintain the air compressor. This process is vital to the proper use of the unit.

A few notes on this manual:

A copy of this manual is provided with every air compressor and can be found in the hard plastic manual case that is installed on the chassis. A copy of this manual shall remain with the air compressor at all times.

Throughout the manual, three signal words will be used to bring attention to important items:

NOTICE

A NOTICE signal word indicates a practice not related to physical injury.

⚠ WARNING

A WARNING signal word indicates a hazardous situation which, if not avoided, could result in death or serious injury.

⚠ DANGER

A DANGER signal word indicates a hazardous situation which, if not avoided, will result in death or serious injury.

Information contained within this manual does not cover all maintenance, operating, or repair instructions pertinent to all possible situations. Please be aware that some sections of this manual contain information pertaining to Stellar Industries® manufactured air compressors in general and may or may not apply to your specific model.

This manual is not binding. Stellar Industries reserves the right to change, at any time, any or all of the items, components, and parts deemed necessary for product improvement or commercial/production purposes. This right is kept with no requirement or obligation for immediate mandatory updating of this manual.

In closing:

If more information is required or technical assistance is needed, or if you feel that any part of this manual is unclear or incorrect, please contact the Stellar Industries Customer Service Department by phone at 800-392-3015 or email at service@stellarindustries.com.

Chapter 1 - Specifications

SPECIFICATIONS	8P
Hydraulic System	7 GPM @ 1800 PSI
Max Compressor Speed	1250 RPM
Hydraulic Operating Pressure	1800 PSI
Hydraulic Relief Pressure	2500 PSI
Max Working Pressure	150 PSI
Air Delivery (At Max Speed)	8 CFM @ 100 PSI
Weight (Hydraulic Driven Assm)	125 lbs.
Weight (Air Pump Only)	52 lbs.
Dimensions (Length)	23.06"
Dimensions (Width)	14.13"
Dimensions (Height)	16.69"
Electrical	12V DC
Crankcase Oil Capacity	16 Ounces
Cooler Fan	350 CFM, 12 Volt (Pull)
Drive Type	Direct Drive

NOTICE

Duty cycle on Piston Compressors is 50:50 over 10 minutes.

This page intentionally left blank.

Chapter 2 - Installation

Component Installation

This section pertains to the installation of the air compressor, PTO, pump and other related items. The instructions are intended as a guide to assist you with particular installation. These instructions will provide only general information.

Compressor Torque Procedure

Head Assembly:

Torque Value: 34 ft-lbs

Procedure: Assemble head on the cylinder with head bolts started only, not tight. Working in the pattern shown, torque three times, increasing the torque each time as follows:

First Torque: 10 ft-lbs

Second Torque: 20 ft-lbs

Third Torque: 34 ft-lbs

After five hours of use re-torque bolts to 34 ft-lbs.

Cylinder Assembly:

Torque Value: 20 ft-lbs

Procedure: After assembling cylinder over pistons and setting into place, tighten (6) cap screws finger tight. In a criss-cross pattern, tighten bolts evenly so all bolts are hand snug. Again in a criss-cross pattern torque each bolt to 20 ft-lbs, checking each bolt twice. After five hours of use, re-torque bolts to 20 ft-lbs.

Connecting Rod Control:

Torque Value: 18 ft-lbs

Procedure: Assemble rod onto the crankshaft taking care to align the machined surfaces together and tighten cap screws finger tight. Tighten bolts until hand tight and torque to 18 ft-lbs. Check twice the torque reading before final assembly of the cylinders.

Component Installation, continued

Pump Assembly:

The pump assembly may either be installed directly on the PTO or as an optional method, may be driven by a driveline from the PTO. Pump manufacturers provide specific installation information for their products and should be consulted if questions arise. Note: A dual or tandem hydraulic pump is recommended when additional hydraulically operated equipment are added to the hydraulic system.

PTO Assembly:

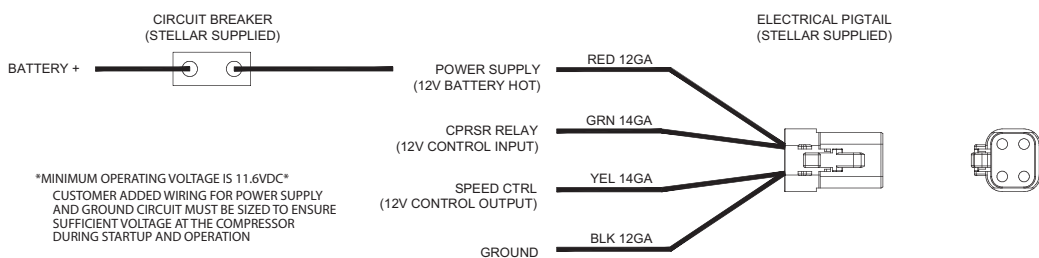

Check with the PTO manufacturer's representative for specific instructions regarding your particular make, model, and year of vehicle. As some trucks may require modification of the transmission cross member and the exhaust system, the manufacturer's instructions should be followed to ensure proper installation of the PTO.

Compressor Assembly:

Prepare the mounting location of the compressor by locating and drilling four (4) holes, 1/2" diameter as per the mounting pattern of the air compressor base. Using four (4) 3/8" x 1.25 GR-5 cap screws, 3/8" flat washer, and 3/8" nyloc nut, secure the compressor in place. The compressor is air cooled, and must have a clean supply of cooling air to the fan with minimum restrictions. Adequate space must be provided for proper circulation of air.

Electric Speed Control:

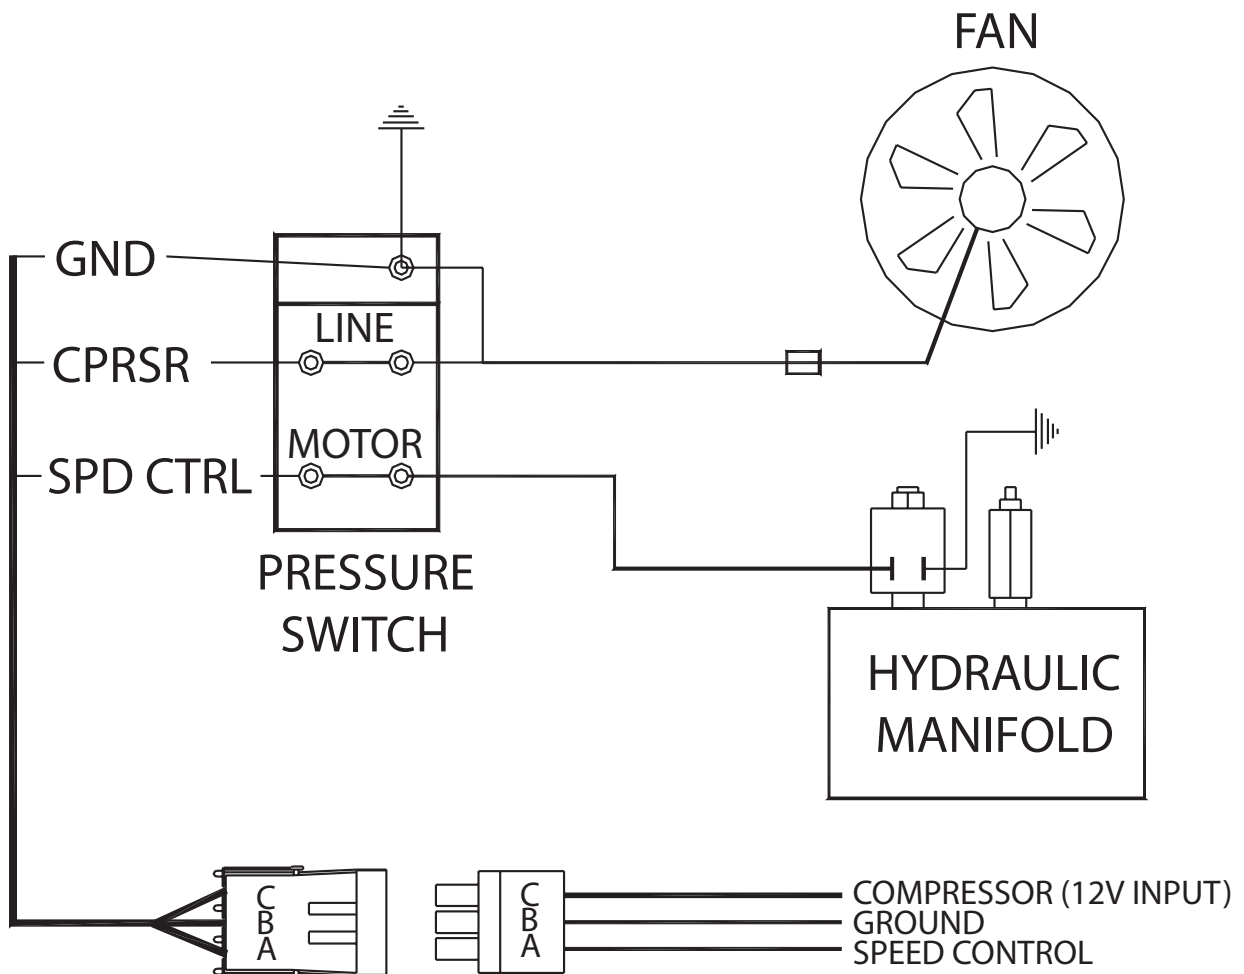

An optional electric or electronic speed control must be used to maintain proper operating speed of the air compressor. The engine speed control will automatically increase from idle to preset speed when engaged and decrease when disengaged.

8P Electrical Schematic

Electrical Connections:

Supplied with the compressor is a wire harness pigtail which has 4 leads coming off of it. Connect the black wire to the vehicle frame or other suitable ground. Connect the red lead to a fused power source. Mount a single throw toggle switch in a convenient location and connect the green wire from the compressor to this switch. Connect the other switch terminal to a fuse holder and then to a 12V power supply. The yellow wire is required from the compressor when connecting the speed control into the system.

Hydraulic System

The hydraulic system consists of the oil reservoir, pump, manifold, motor, filters, and hoses. A $\frac{1}{2}$ " 3000psi pressure line should be connected to the pressure line fitting on the bulkhead. This line is plumbed through an internal manifold block, and then to the motor. After the motor there is an internal cooler which the oil passes through before going to the return line bulkhead fitting. A $\frac{3}{4}$ " minimum low-pressure return line is to connect to the return bulkhead fitting and filter before being returned to the oil reservoir. Stellar Industries recommends a sufficiently-sized reservoir be provided that includes the proper suction and return filters. The cooler on the compressor is designed and sized to cool the air compressor efficiently. An auxiliary oil cooler is required when additional hydraulically operated equipment is added to the hydraulic system. Pressure on the return line exceeding 200PSI can and will cause damage to the filter, cooler, and components of the compressor's hydraulic system.

Air System

The airline is routed using a $\frac{3}{4}$ " 200 psi air/steam hose. This delivery line should be free from all obstructions. Note: There should be no check valve installed between the compressor and the air tank (One is already included in the compressor package). Stellar Industries recommends the installation of a ten-gallon air tank (minimum) to maintain proper operation of the air compressor.

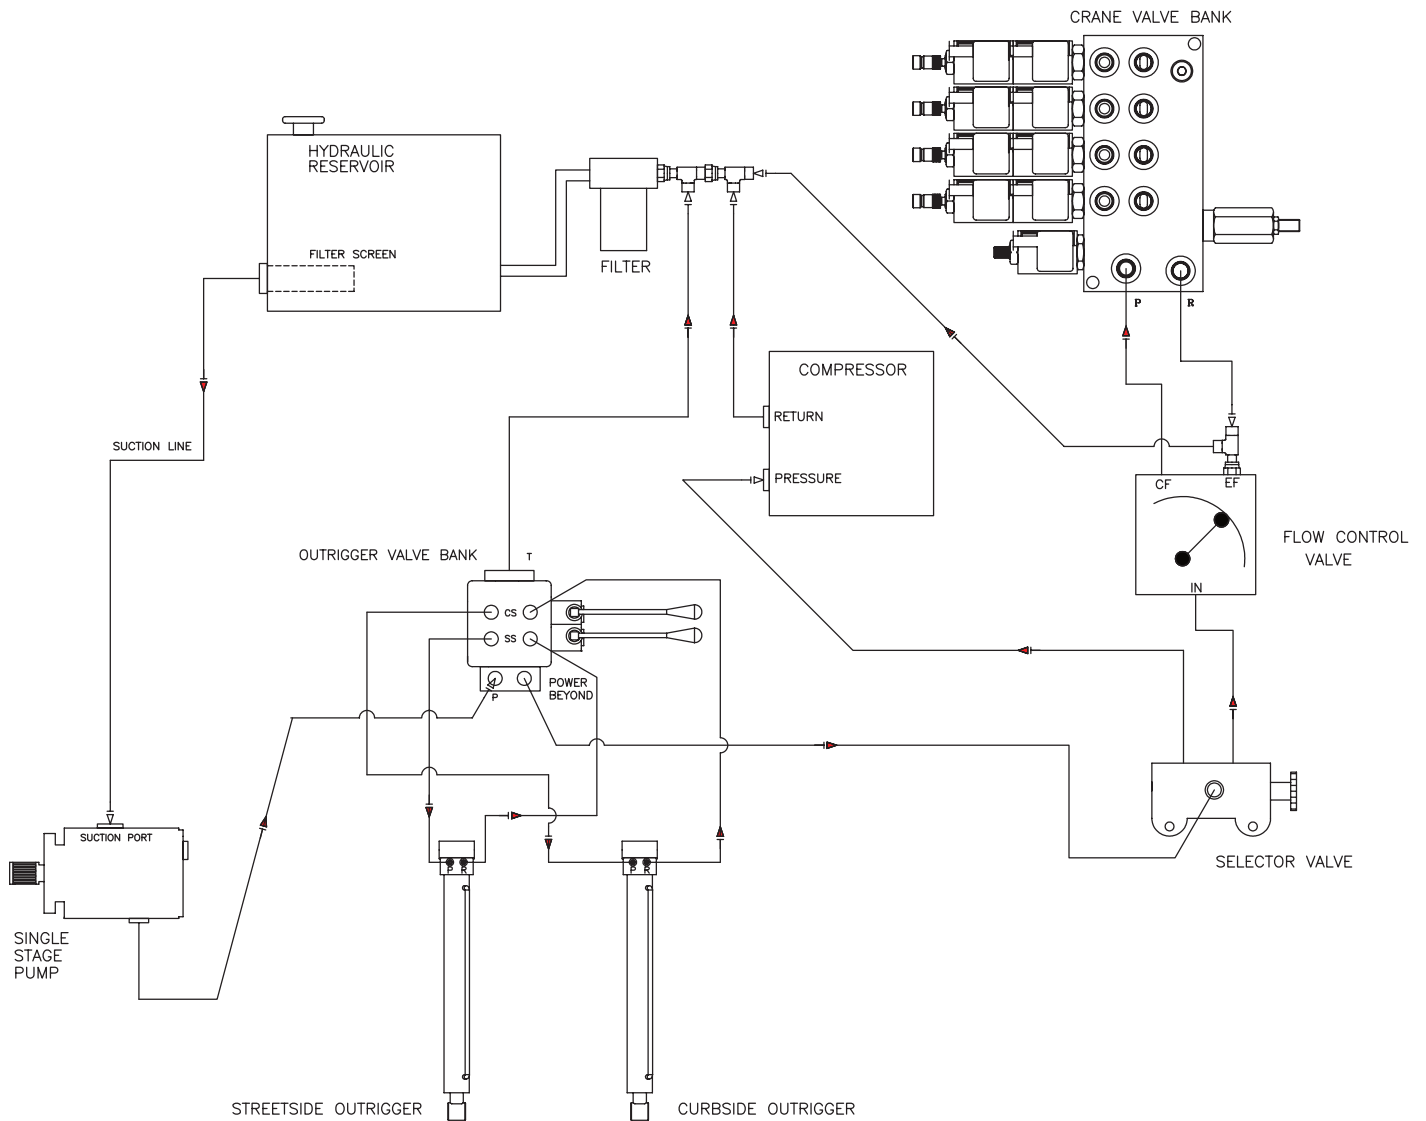

Compressor Pressure Switch

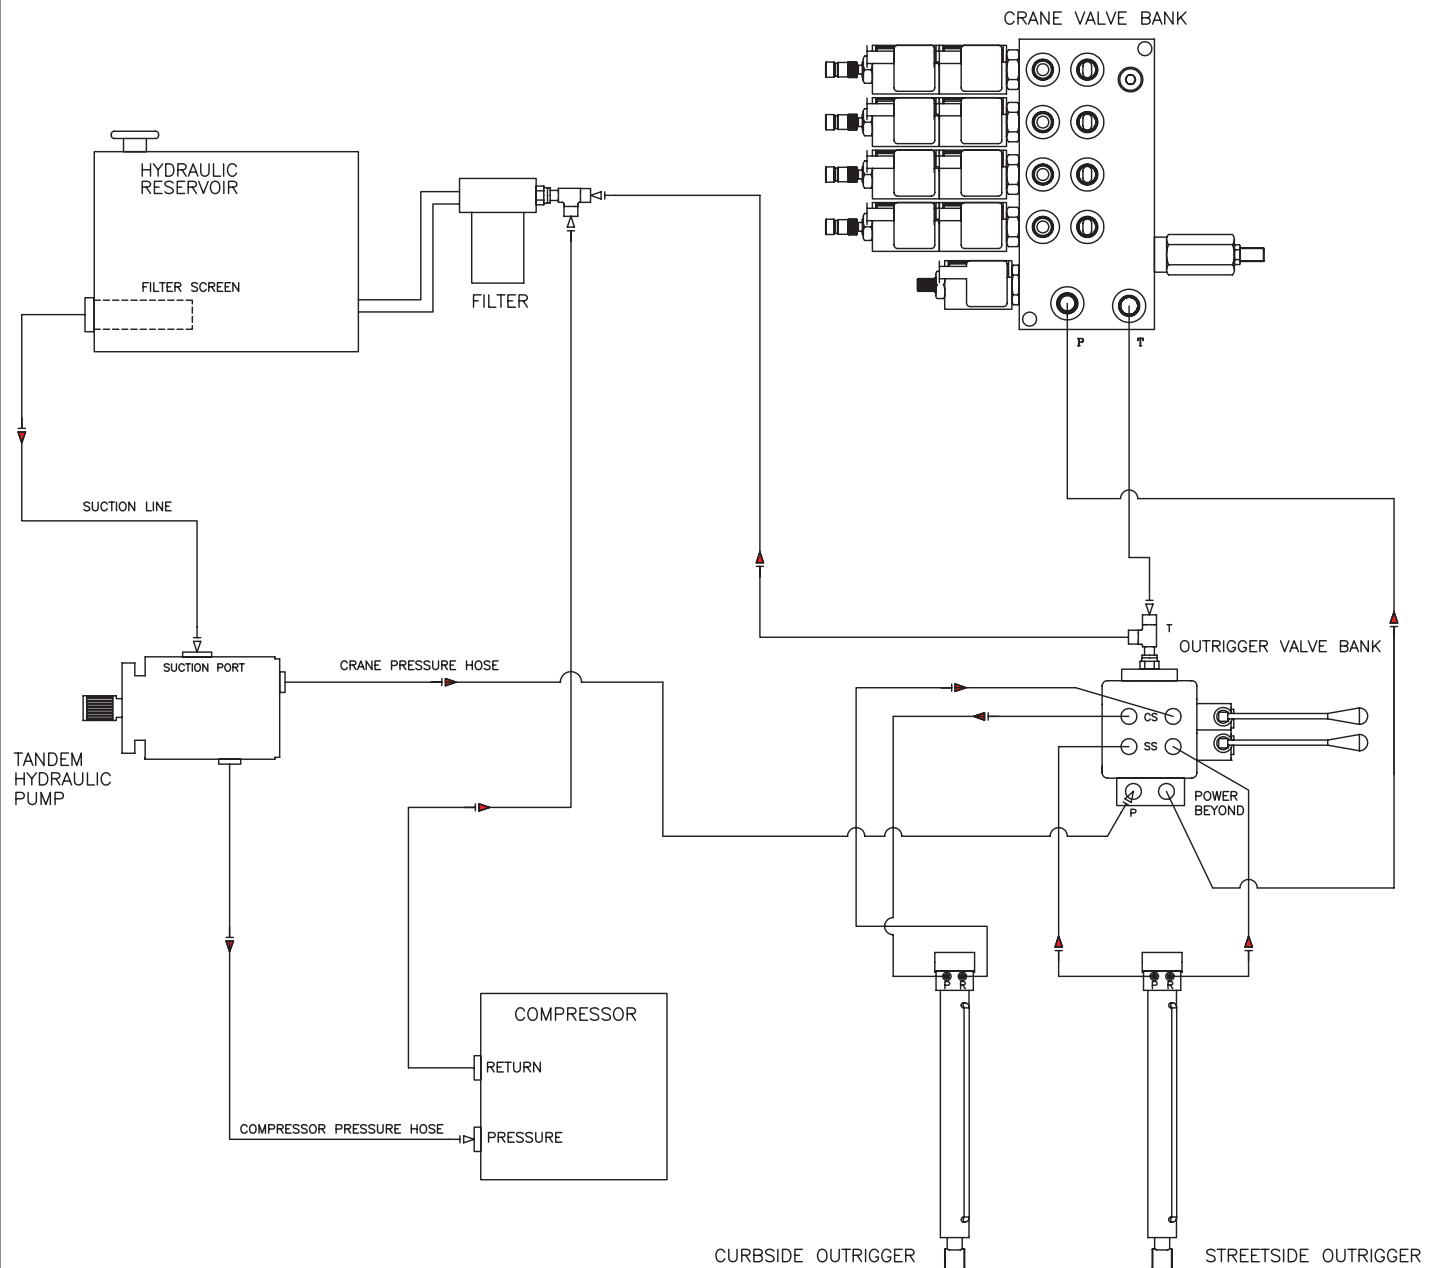

Pressure Setting Instructions:

1. Always set the kick out pressure setting first. Adjust the kick out screw setting to 145 psi minimum/150 psi maximum.
2. After kick out pressure is set, adjust the kick on screw setting to 115 psi minimum/120 psi maximum.
3. Cycle compressor to verify correct settings.
4. For questions about this procedure, please contact Stellar Industries Customer Service at 800-321-3741.
