

**Helping Mothers Survive  
Bleeding after Birth Complete Day 1  
OSCE 1: AMTSL Skills Checklist**

**Guidelines to be read to participants:**

- For each station assume you are alone in a rural health care facility with no surgical or blood transfusion capacity. You do have all equipment and supplies necessary for a normal vaginal birth.
- All essential information will be provided to you at the start of each OSCE station.
- Ask the evaluator to clarify any questions prior to beginning. Once the OSCE has started, the evaluator will not provide any further information.
- You will have 4 minutes to complete each station.
- Talk to and care for the woman in front of you exactly as you would in real life.
- Be explicit in verbalizing your clinical thinking and subsequent decisions.
- If you give a medication, you must state what you are giving, the dose, the route, and why you are giving it.

**Key**

**Pass score for Routine Care 3<sup>rd</sup> stage = 10/13**

## Helping Mothers Survive: Bleeding after Birth Complete OSCE 1: AMTSL Skills Checklist

Participant name or ID# \_\_\_\_\_ Date \_\_\_\_\_

### Routine care during the third stage of labor – Skill Check

#### Instructions for the Examiner

- Briefly review the instructions for the participant.
- Start with baby on top of the simulator’s abdomen.
- For cutting the cord, observe for: 1) changing/or taking off first pair of gloves, 2) cutting after uterotonic.
- Observe only; do not intervene in demonstration of the participant.
- The feedback will be held at the end of the assessment for all learners.

**Read the following to the learner:** “You are alone in a rural facility and at the start of this scenario you have just now delivered a baby and placed it on the mother’s abdomen.”

	Checklist of skills	Check appropriate box for each item	
		Performed to standard	Did NOT perform to standard
1.1	Following birth of the baby, checks for a second baby		
1.2	Tells the woman the provider would like to give a medication to help the uterus contract		
1.3	Obtains the woman’s consent		
1.4	Gives uterotonic medication within 1 minute of birth of the baby (states dose, route, drug)		
1.5	Changes gloves / Takes off first pair of gloves		
1.6	Cuts the cord 1-3 minutes after birth		
1.7	Applies counter pressure when performing controlled cord traction		
1.8	Performs controlled cord traction only when the patient is having a contraction		
1.9	Uses both hands to catch the placenta and gently turns the placenta while it is being delivered		
1.10	Checks uterine tone immediately following delivery of the placenta		
1.11	Inspects the placenta for completeness		
1.12	Checks for genital tears		
1.13	Checks the woman’s bleeding
