europesales@lockncharge.com

Greetings from LocknCharge

Thank you for your time and consideration of LocknCharge products for your organisation. We are proud to offer a range of charging, storage, security, management and disinfection solutions for your mobile device programs.

Tens of thousands of schools and businesses have experienced the difference of LocknCharge: responsive customer service, innovative solutions and high-quality products. As a company, we not only look at the needs of today. Our vision and mission is to be a trusted partner to set your organisation up for success for many years into the future.

Why Choose LocknCharge?

A Solution for Every Workflow

Whether your organisation is deploying 5 or 100,000 mobile devices, LocknCharge offers products and support to integrate mobile technology seamlessly into workflow. While all of our mobile device charging stations are designed to store, charge and secure mobile device investments, we also specialise facilitating deployment for 1:1 device programs, remote programs, take-home device programs, shared device programs, check-in/check-out systems and bring-your-own-device (BYOD) programs.

Trusted for 20+ Years

Our charging solutions are designed and developed with extreme consideration for the user. We listen to the needs of customers and design our products to solve pain points specific to their organisation's needs. Our products boast features not offered by most competitors: top-loading Carts, Baskets by LocknCharge, Cloud-based smart lockers, future-proof designs, compact solutions, ECO Safe Charge™ and much more.

We have a positive reputation for working with large businesses and school districts including Universal Studios, BP, Shell, Chevron, Vauban Educational Institute, Blédina, Harrods, London Zoo, Allegiant Airlines, San Francisco USD, Fort Bend ISD, Dallas ISD, Putnam City Public Schools, Orange County Public Schools, DeKalb County Public Schools and many more.

World-Class Customer Service

We take great pride in our excellent customer service. We think of our customers as partners, and we know that by working hand-in-hand we'll be able to provide the best charging solution for each organisation's unique needs. Our customer service team for all EU Sales is located in the UK and boasts a Net Promoter Score* (NPS) higher than most tech giants. The number one reason people like us is because of our staff and customer service. But don't take our word for it; see for yourself what our customers are saying:

"...what stands out the most are the people! LocknCharge has a great team that is easy and enjoyable to work with, and I feel very much like a partner within the education of our students rather than a vendor."

"Great products. Fast and reliable communication."

"LnC has the hardest working staff in the industry; it makes a difference."

Our Commitment:

If we don't have the time, we'll make it!
If we don't have the answer, we'll find it!

lockncharge

How Much Does Your Device Repair and Replacement Process Really Cost?

One of the top complaints by IT staff is that they don't have enough time to complete their workload. Despite that, when nearly 20% of mobile devices break or go missing each year, the burden usually falls on them. Not only is this a drain on your tech team's time, but it also adds a significant amount of downtime for employees or students who are unable to work. When devices are lost or damaged, all productivity and communication comes to a screeching halt.

Have you ever calculated how much time your IT department wastes gathering and replacing broken devices?

- ✓ The average fully-burdened labor cost for IT technical work ranges between £52/€62 and £103/€123 per hour
- ✓ In office, it takes about an hour to manually exchange a device
- ✓ In this example, the average number of mobile device exchanges per week per location is around 5

This example demonstrates that nearly 250+ hours and £20,975/€23,529+ are spent annually by an IT Team manually exchanging devices.

While it is impossible to eradicate all system and equipment issues, there's a better solution to decrease device downtime and reduce workloads. One that doesn't include hiring more people, creating more manual workarounds or spending even more money outsourcing the issue altogether.

SOLUTION:

Automate Broken Device Exchanges with Smart Lockers

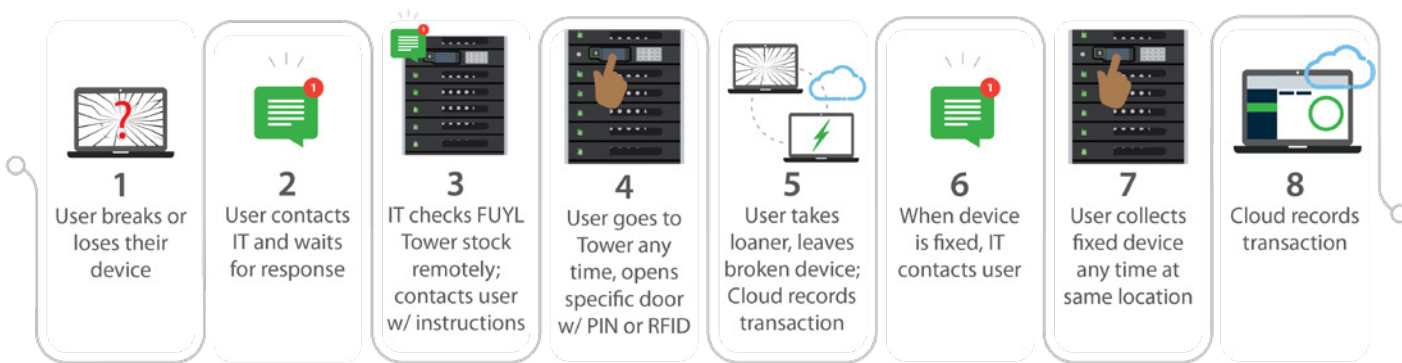

By automating the manual device replacement process, FUYL Tower Charging Lockers allow organizations to save a considerable amount of time and money—and reduce staff frustration caused by frequent interruptions. **You can expect a return on your FUYL Tower investment in as few as 10 to 16 weeks.**

Simplify Device Exchange Workflow

By deploying a cloud-based smart locker such as a FUYL Tower by LocknCharge, you can eliminate many of the manual workflow processes of break/fix

programs, and simplify replacing damaged, lost or forgotten devices, tools, accessories and more. A FUYL Tower allows organizations to keep several devices charged, secure and connected in a location that is accessible to on-site device users or remote device users.

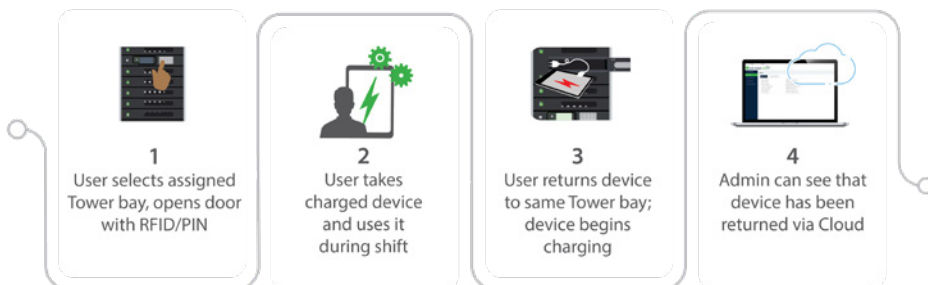

When a staff member or student breaks a device, it's now possible to send them to a FUYL Tower to quickly get a replacement. Not only does this solution save time and money, but it can also make your tech team's lives easier.

To automate this process even further, FUYL Towers can be integrated with your current IT ticketing system, such as Incident iQ, ServiceNow or Remedy.

Eliminate Your Manual Device Check In/Out Process with a Smart Locker

Automate the Check-in/out Process

To streamline the use of shared technology, fill a FUYL Tower with ready-to-go mobile devices. You'll reduce in-person interactions and speed up the check-in/check-out process.

With the FUYL Tower, the IT team or department manager can assign specific lockers and devices to employees and restrict and monitor access to these devices. This process held employees accountable for devices and streamlined IT's ability to efficiently manage thousands of devices remotely.

When evaluating a smart locker solution, here are some key features to consider:

Agile, In-House Software Development Team

Internal resources dedicated to consistent Cloud feature releases and enhancements ensure smart locker software will pivot to meet your tech program needs well into the future.

Security Features

The cloud-based software should include features like Two-Factor Authentication (2FA) and Single Sign-On to protect your organization's data. Quality locker construction will keep devices physically safe while stored inside a locker.

Administrative Access

It is important that smart locker administrators can remotely control locker access (who, what, when) via a cloud-based portal. It is also important that lockers can be accessed locally via the locker display, so on-site staff can manage day-to-day usage as needed.

Wi-Fi Compatible

Choosing a smart locker that can work over Wi-Fi gives your organization flexibility to install the locker in the best possible location without investing in costly cabling infrastructure.

External System Integrations

Managing locker users and workflow with tools—such as external directory integrations, help desk software integrations, open API with no call limits, and web hooks—makes process automation endless.

Key FUYL Tower™ Smart Locker Benefits

- ✓ Store devices in the ready-to-go state, and an admin can remotely control user access.
- ✓ Empower users to self-serve devices at their convenience to maximize device uptime and protect Tech Team's time.
- ✓ Easily scale via the LocknCharge Cloud and our external directory integration, to manage thousands of devices and device users.
- ✓ Enjoy Long-Term Flexibility. Reconfigure your Cloud settings to flex as your mobile device needs or workflows change or integrate Cloud with external systems to streamline processes even further.
- ✓ Gain peace of mind with support from our world-class team and a lifetime warranty.

Smarter mobile device workflows.

Check In/Out

Break/Fix

Shared Devices

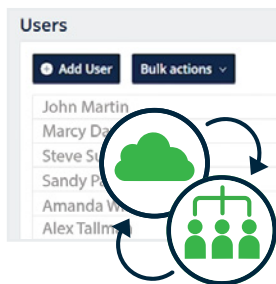

Loaner Devices

Public Charging

Highlights

Automate manual processes for managing mobile devices to reduce wasted time, minimise device downtime, maintain devices with zero human interaction, provide secure charging on demand and much more.

Manage User Access to Towers with External Directory Integration.

Integrating your organisation's Active Directory, Google Workspace*, or other LDAP-compatible directory simplifies and centralises Admin control of user access to FUYL Towers. This integration enhances security, allows for faster setup and offers easier maintenance of Tower users and user group(s). If you prefer not to integrate, a built-in User Directory is also available to manually add and manage users.

Securely Charge and Store Devices so They're Always Ready for Use.

All bays contain a power outlet and either a 2.4 amp USB-A port or a 36W USB-C port¹ with Power Delivery (PD) Charging so you can securely charge almost any device, including iPads, tablets, laptops, mobile phones, Chromebooks, and more.²

Manage Multiple Towers from One Centralised, Web-Based Portal.

Give designated admins detailed access to view and manage any number of Towers.

Integrate LocknCharge Cloud with External Systems.

Take device management to the next level. Using Cloud API and webhooks, LocknCharge Cloud can be integrated into external and/or existing IT infrastructure.

Cloud Highlights

A LocknCharge Cloud subscription grants access to the web-based management portal.

Initial 1-year subscription is included with every FUYL Tower.³

- ✓ Create a tree structure to organise and manage Towers easily.
- ✓ Set up and manage Towers with three levels of administration: Owner, Admin or Station Admin.
- ✓ Easily cascade settings to all Towers, nodes of Towers or specific Towers to make setting up and managing Towers quick and efficient.
- ✓ Admins can create User Groups to better manage users and to authorise large sets of users to specific Towers or nodes of Towers.
- ✓ View a detailed event log to know who accessed bays and when, know when updates are made by administrators and more.
- ✓ View Tower status at the company, Tower or bay level to see detailed information, such as whether bays are assigned, available or offline.
- ✓ Remotely control Tower access to unlock bays, take a bay offline, clear a user from a reserved bay, set a curfew, or even to completely lock down a Tower.
- ✓ Grant specific users access to certain bays or Towers by using their RFID badge or assigned PIN code.
- ✓ Update Tower firmware and software over the air.
- ✓ Integrate existing IT infrastructure into Tower workflow through Cloud API and webhooks.

Cloud Features

Public Mode

In Public Mode, the FUYL Tower functions as a public charging station where users can choose an empty/available bay (green LED), enter a PIN or swipe an RFID card to reserve that bay, and secure their device inside for later retrieval. After the bay has been reserved, the LED will turn white, indicating to other users that the bay is reserved. When the bay has been re-opened by the user to retrieve their device, their PIN or RFID is automatically cleared from that bay, and the bay is available for the next user (the bay LED will turn back to green after the door is pushed closed). This mode functions very similarly to a hotel safe.

Bay access via PIN or RFID

The keypad and RFID reader built into the control door give maximum choice for accessing the bays on the Tower. The RFID reader can read many RFID standards on the market including HID and MIFare. For a full list of compatible RFID standards, please visit <https://docs.lockncharge.io/rfid>.

Basic administration from Tower display

FUYL Towers can be administered directly from the hardware (LCD display on the Tower). A *Station Admin* can lock down bays, unblock bays in error state, inspect the contents of bays, open & close doors and more.

Two-Factor Authentication (2FA)

Protect your account from unauthorized access with the option to require all admins to log in with 2FA.

Multiple Admin types

The Cloud comes with pre-set administrator types: Owner, Admin and Station Admin.

Owner: The Owner has complete administration control of the Tower. Owners are able to create custom roles.

Admin: Admins can do almost everything that an Owner can do, with some restrictions.

Station Admin: Station Admin can only perform administrative functions that are available on the Tower's LCD menu. Station Admins do not have access to the LocknCharge Cloud portal.

For a complete description of each role type, please visit www.lockncharge.com/eu/fuyl-tower-support-library, and reference the "LocknCharge Cloud User Guide".

Over-the-air updates

New features are automatically available to customers as they are released to Cloud. With auto-firmware updates toggled on, the system is always up-to-date to ensure the best experience possible. For more details, please reference the "LocknCharge Cloud User Guide" at www.lockncharge.com/eu/fuyl-tower-support-library.

Remote station administration via web-based portal

Manage all of your FUYL Towers from one portal, no matter the location. FUYL Towers can be on-boarded into a Cloud account and administered remotely using the Cloud portal, rather than using the physical LCD screen and number pad on the Tower.

For additional details, please reference the "LocknCharge Cloud User Guide" at www.lockncharge.com/eu/fuyl-tower-support-library.

Event log

All interactions with the FUYL Tower(s) are logged in an event log. These logs can be viewed centrally from the Cloud. Reporting includes ability to export CSV file of the event log.

Bulk operations

LocknCharge Cloud makes setting up FUYL Tower configurations fast by allowing admins to set bulk settings from the account level based on their Cloud subscription tier.

It is possible to override the account-level settings on individual Towers should admins want to configure Towers with different settings. E.g., bulk operations include configuring network settings, assigning users and changing Tower mode settings.

Tags

Admins can tag users, nodes, stations, and bays to filter items.

Reports

LocknCharge Cloud has a built-in reporting tool in the web portal interface to provide you with insight into how your organization is using FUYL Towers. Using the 'Reports' section, you can easily view, analyze or export data to a CSV file to review usage statistics, including: current bay states, current user reservations, station usage and usage by user.

User groups

Admins can also create user groups to better manage users and to authorise large sets of users to specific stations or nodes. Additionally, if a user group members change over time, authorisation for station access changes with user group updates, saving significant time.

Built-in User Directory

LocknCharge Cloud has a built-in User Directory that enables admins to control who is allowed to use FUYL Towers. Individual users or user groups can be assigned to the entire node of Towers, single Towers or individual Bays. Individual users or user groups can be created directly in the Cloud Portal or can be imported from a CSV file. Users can be granted access with RFID or a unique PIN. When users are assigned to Towers, the event log allows for an easy audit trail of who accessed which bay and when.

Broken device exchange workflows

The Cloud allows admins to change Tower settings in a specific configuration that facilitates break/fix workflow.

Device check-in/check-out workflows

The LocknCharge Cloud allows admins to change Tower settings in a specific configuration that facilitates check-in/check-out workflows, including shared device programs, 1-to-1 workflows and more.

Curfew

LocknCharge Cloud allows admins to configure Tower settings to restrict access to the Tower or a Tower node. Curfews can be set for specific days, every day, single time spans per day or multiple time spans per day.

Self-register RFID

Reduce the burden on Admins for setting up users with RFID. Users can be prompted to register their ID Card during the bay access process.

Roles

Owner administrators can create custom roles to limit the permissions of non-owner administrators to specific nodes.

External directory integration

Integrate your organisation's Active Directory, Google Workspace* or other LDAP-compatible directory with LocknCharge Cloud. Integration enables centralised and simplified Admin control of user access to FUYL Towers. Benefits include:

Enhanced security. E.g., when a user leaves your organisation, disabling them from your directory automatically disables their FUYL Tower access.

Faster setup and maintenance. E.g., rather than recreating users in LocknCharge Cloud, Admins are able to integrate their directory to our system and save time.

Cloud API

LocknCharge Cloud API allows programmatic access to the Cloud. This allows customers to create their own applications for users to interact with. (E.g., users would interact with an interface via an iPad for checking devices in and out, as opposed to a Tower's LCD monitor.)

Any existing programs can also be integrated using Cloud API. This allows customers to continue to use software they already use—such as the help desk software—as part of the workflow for which they are using the Tower(s).

Webhooks

Webhooks allow admins to send real-time events from FUYL Towers to other systems to enable automation of downstream workflows.

How this works is all events from the Tower(s) on-boarded into the LocknCharge Cloud are automatically sent to the Cloud events log. In the Cloud portal, admins can register a webhook for specific events they are interested in and get LocknCharge Cloud to forward the event information to the preferred downstream system. E.g., ServiceNow® can take automated actions when those events are received.

Single Sign On (SSO)

Configuring an SSO provider allows admins to securely login to LocknCharge Cloud and other systems/websites with one set of credentials.

Network Connectivity

To take advantage of the FUYL Tower's remote administration features, you must connect your Towers to the Internet and pair them with your LocknCharge Cloud subscription. Connectivity options include:

- ✓ Toggle network interface: Wi-Fi (WPA2 or Open), Ethernet or WPA2 Enterprise Wi-Fi
- ✓ Set, review, update, delete Wi-Fi network details
- ✓ Set, review, update, delete DHCP details
- ✓ Set, review, update, delete Static IP

Note: Wi-Fi supports both 2.4GHZ and 5GHZ wireless.

Onboarding Checklist

1. Ensure that the following domains are whitelisted:

- ✓ Chargebee: client ID
- ✓ Lockncharge Cloud: original cloud owner admin invite

2. Ensure that your network firewall or proxy is not blocking outgoing connections to the endpoints listed.

- ✓ Please contact your network administrator if you are unsure of any changes to your network configuration that may be required.

Cloud Security

- ✓ Admins can apply updates and security patches to FUYL Towers as they become available, keeping their Towers up to date and more prepared against cyber attacks.
- ✓ The Cloud is powered by Amazon Web Services, the most secure cloud computing environment available.
- ✓ LocknCharge Cloud complies with many regulations globally. We leverage Amazon Web Services (AWS) which distributes the data in several server centers to ensure high response times for all customers. We cannot guarantee where the data is stored as it's dependent on AWS.
- ✓ The FUYL Tower meets [GDPR guidelines](#) and the [Australian Privacy Act](#).
- ✓ The FUYL Tower will not expose your network to malicious access from the Internet. The FUYL tower does not accept any inbound connections, such as SSH or telnet.
- ✓ The Cloud connection will not expose your network to malicious access from the Internet. The cloud connection, initiated from the FUYL Tower, is a simple messaging protocol secured using cryptographic certificates. This messaging protocol does not have the ability to inject malicious code.
- ✓ Back-end security includes single-page-app to RESTful API protected by TLS (user authentication using OAuth).
- ✓ Cloud architecture and cloud security is based off of AWS native architecture: utilising IOT Core, DynamoDb and Lambdas. Deployment environments are strictly security gated, with the production environment being deployed only via CI/CD and having no direct employee access privileges.
- ✓ Current RFID security is a simple one-way RFID string, and all RFID's and PIN's are hashed and protected at rest on both the platform and device level.
- ✓ Two-Factor Authentication (2FA) option can be used to help protect your account from unauthorised access - requiring all admins to enter an additional code when logging in. The 2FA feature currently supports the use of an authenticator app authentication method.

Hardware that works harder, so you don't have to.

Secure

Durable

Well Designed

Serviceable

Intuitive

Hardware Highlights

External LED Bay Status. Each bay has an external LED indicator to know if a bay is available (green), reserved (white) or offline (no light).

Bay Visibility. A window provides visibility inside each bay—or if privacy is preferred, window-blocking plates are also included.

Secure. Built from steel, the Station's robust design means that it will deter the opportunistic thief from attempting a break in.

Serviceability in the Field. Various hardware and electronic components are packaged into modules allowing for serviceability in the field, rather than returning the whole unit back to base. Administrators can access the electronics behind the control door with a key. The same key also opens the side panel to access lock modules, cabling and power supplies.

Multiple Outlets in Each Bay. Each bay contains one power outlet AND either one USB-A port (FUYL Tower) or one 36W USB-C PD Charging port (FUYL Tower Pro).

Easy-to-Follow, Feature-Rich Tower Display. Administrative functions—*unlocking, inspecting or quarantining a bay, setting an RFID (admin and bays), performing diagnostics (network, clock, door, keypad and RFID), retrieving Tower IP address and version details, accessing system resets, etc.*—are available from the 4.3" Graphical Colour Tower Control Module and Keypad. The Tower's user interface is simple to navigate for both admins and users.

Illuminated Compartments. As the door is opened, internal lights illuminate the compartment to help users clearly see the device to ensure safe removal of the device. E.g. if it's plugged in or connected to the Ethernet port, you can see that its connected and unplug before you remove the device so you don't damage the cables/ports.

Sleek Design. Minimalist design adapts to any environment.

Capacity. The Tower comes in two size options of either 5 or 15 individually-lockable bays.

Additional Storage Compartment (FUYL Tower Pro 15 only) for adding a small switch or UPS.

Optional Network Kit. The Network Kit enables installation of a network switch (not included), making it possible to re-image devices remotely.

Lifetime Warranty. LocknCharge products are built to last. Welded-steel construction makes this Charging Locker ultra secure, and a lifetime warranty provides peace of mind.²

World-Class Customer Support. Our helpful and friendly Customer Support team will promptly assist with any product issues or questions that may arise.

www.lockncharge.com/eu | Phone: +44 (0) 208 441 4107 | europesales@lockncharge.com

¹ USB-C port is only available in the FUYL Tower Pro versions. Not available in all markets or products, talk to your LocknCharge Representative to understand product availability. ² Please see www.lockncharge.com/eu/warranty for complete details.

Case Study Snapshot

Allegiant Airlines

The Story

Allegiant is in the midst of a digital transformation. The pilots and flight attendants depend on fully charged and up-to-date iPads to perform their jobs. Sometimes the devices are broken or lost and there is an immediate need for a replacement iPad. In the past, Allegiant would be dependent upon an IT team member to manually replace an iPad, which is time consuming and expensive. Now with a LocknCharge FUYL Tower at every Allegiant employee lounge in airports across the US, the replacement iPad process is simplified, and they can keep business running 24/7.

Workflow: iPad Replacement Program

- **As a pilot** with a broken iPad, I want immediate access to a new iPad from the FUYL 15 so that I can fly the aircraft as scheduled.
- **As a flight attendant** who forgot to bring an iPad to work, I want to use the FUYL Tower to check out an iPad, so that I can increase company revenue by selling passengers products and food through the Allegiant iOS App.
- **As a technical support specialist in the Help Desk**, I want to be able to see all 14 Allegiant Airport base FUYL Towers through one login, so that I can efficiently push out iOS updates over the air via JAMF to a specific iPad.

Why the Customer Cares

- **Device Replacement Program:** able to store iPads in the “ready to go” state, which eliminates delays with replacing broken devices—keeping employees up and running.
- **Simplify Workflow:** make life easier for IT’s management of replacement devices.
- **Monitor and Manage Devices:** notifications around device removal and use.
- **Secure:** store, charge and distribute multiple devices.

Vauban Educational Institute

The Story

As part of their 1:1 digital textbook program, each student at Vauban is the owner and manager of their iPad. To keep devices charged during the day, the Tech Team planned ahead by providing secure public charging on demand. FUYL Tower Smart Lockers reduced many common challenges—such as uncharged or stolen devices—that other organisations have faced during their 1:1 take-home device program. As of 2021, 1,600 iPads have been deployed for students and 300 iPads for teachers.

Workflow: Public Charging On Demand

- **As a busy teacher**, my students need to be accountable for the charging status of their devices so that I do not waste class time troubleshooting dead devices.
- **As a student who uses an iPad during class**, I need access to secure charging on demand so that I don’t fall behind during the day if my device loses charge.
- **As a technical support specialist in the Help Desk**, I need secure, future-proof Smart Lockers that are flexible so I can pivot device workflow as tech advances or needs change.

Why the Customer Cares

- **Students Won’t Fall Behind:** for students who forget to charge their devices overnight, or when devices lose charge during the day, FUYL Towers provide a boost of power. Devices are secured in individually-lockable bays that can be conveniently accessed by PIN or RFID.
- **Hold Students Accountable:** tech teams and teachers are no longer interrupted by uncharged devices during class. Teachers can focus on teaching, and students can focus on learning.
- **Reduce Breakage Rates:** devices that are secure while charging are less likely to be damaged or lost.
- **Secure Data:** devices can be left unattended while charging inside the Tower, at any time, without worry. This reduces the risk of breakage or theft to keep organisational and personal data safe.
