|	
1.	**Go to a desktop computer / laptop. Do not work with a smartphone** Smartphone can not be used since it will always push to use the App which does not support access to the required setting change
2.	**Open a browser (Chrome, Safari, Edge, ..) which you usually use to access the Internet.**
3.	**Type into address bar of the browser 192.168.0.1**
4.	**Sign in with the password on the bottom of the router** If the password is not working or if you do not know the password, follow the password reset procedure of your router.

5. Click on "Advanced Settings" in the main menu

Channel   ◯ Manual ☑ Auto   Channel 124 ⌄

Channel width   20/40/80/160 MHz ⌄

9. **Go to your tado° App and complete the Smart Thermostat Installation**
Start in the tado° App with scanning of the Smart Thermostat you would like to add and follow the commissioning instructions in the tado° App.

10. **If you are done with your tado° Installation you can activate the old setting in your router again. This will not impact the operation of the tado° App going forward. It is only required during the installation to change this setting.**
