

## 'Evaluate Virtually Anything' with the ZEVA Application

### COMPLIANCE ERP SYSTEM

ZEVA means evaluations made easier! ZEVA is a customizable, flexible, and easy-to-use compliance ERP system, made with professionals in mind. Create, assess, remediate, and report on any type of survey or evaluation, across departments or industries, like never before.

### ASSESSMENTS BY YOU, FOR YOU

Your continuous improvement efforts should be as unique as your products and services. With ZEVA, you can create custom evaluations that meet the needs of your organization, import industry and regulatory body-specific standards, replicate company approved processes, or survey vulnerability points on blue prints, to ensure compliance efforts are tailored to your business needs.

Customization of your risk settings, information groupings, assessment types, organizations, score types, and languages provide the adaptability needed to assess all aspects of your organization. Documentation, such as policies or photographic evidence can easily be attached from a computer, phone, or tablet to support audit finding. ZEVA's robust security model ensures that users' access to data, evaluations, reporting, and support materials is appropriate.

Plan engagement resources and personnel, forecast remediation efforts, and monitor evaluation or inspector progress throughout ZEVA's tailored customer reports. Period-over-period analysis within the tool aids in the identification of vulnerabilities, policy gaps, regulatory requirement disparities, and training issues. Overall, ZEVA gives all users a consistent and accessible suite of evaluation tools to create, conduct, manage, and analyze comprehensive assessments for their organization and clients.

### RETURN ON INVESTMENT

ZEVA reduces the burden of compliance by streamlining processes, creating one system of record for an organization, enabling team collaboration, and providing document retention resources for the validation of results. One tool eliminates the need for hard copy assessments, installation outlines, policy libraries, SharePoint, and support documentation retention systems.

ZEVA's mobile and airplane-mode enables approved users to access evaluations at any location, independent of their ability to connect to the Internet. ZEVA's Compliance ERP essentially pays for itself, after just one hour in time savings per user. How much time and money could you be saving by investing in your compliance efforts?

### Want to know how ZEVA can improve your business?
