

RealTime Ops Video Networking Solutions

Flexible and Secure Remote Video Monitoring

RTO is engineering cellular solutions for outdoor video surveillance with video cameras and 4G capable cellular routers from Sierra Wireless. The solution outlined below allows our clients' end-users to easily and rapidly deploy complete surveillance solutions for projects where it may be too difficult or cost prohibitive to have a dedicated network infrastructure.

Solution Highlights

ALL-IN-ONE SURVEILLANCE KITS

By tapping into the increased bandwidth of cellular networks, it is now possible to build cost-effective solutions for video monitoring that can be easily set-up and maintained.

The surveillance solution developed by the RTO team uses a number of high quality devices working together in concert to expand flexibility and scalability, reduce total cost of ownership, and minimize service disruptions.

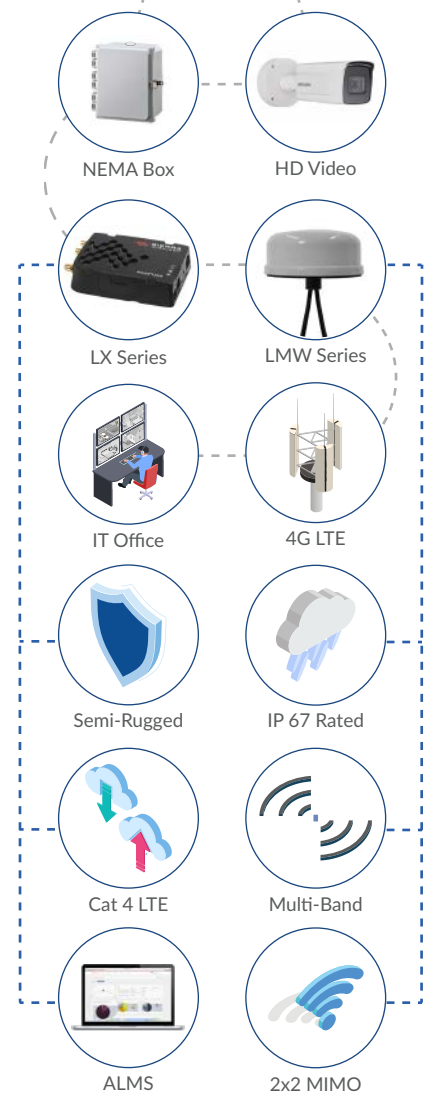

This solution featured here is a combination of equipment, including NEMA enclosures, high-definition outdoor video cameras, AirLink® 4G routers, Mobile Mark antennas, and custom cabling.

All the components we utilize come together to form a well connected and highly resilient solution - purpose-built to reliably operate in harsh environments and challenging conditions.

Ideal for both temporary and fixed installations that require rapid and flexible deployment, RTO can deliver pre-configured cellular routers that are ready to connect immediately upon power up.

Our easy to install and deploy solution can cover permanent locations such as parks, lots, and buildings, as well as pop-up events such as concerts and sporting events.

Why Choose RTO?

For 15+ years RTO has provided IoT connectivity solutions to organizations that deliver video monitoring solutions to clients in various industries. We help OEM's engineer and deliver client solutions that utilize only top-tier cellular devices and equipment from the most trusted manufacturers worldwide.

Our DevProv+ services team configures, provisions, kits and ships your devices hot and ready for immediate use. And our installation teams ensure your devices are functioning securely, reliably, and at peak performance.

Reach out to RTO today to rapidly deploy cellular solutions that meet your clients' exacting video monitoring needs.
