

Genetec Mobile

AutoVu Plate Finder

Cutting-edge automatic license plate recognition (ALPR) available on your mobile phone

AutoVu™ Plate Finder, a feature of Genetec™ Mobile, converts your mobile phone into a helpful law enforcement tool. Securely verify parking rights, scofflaws, and hotlists against your existing Security Center configuration while on the go.

Validate difficult-to-access license plates

Validating license plates against parking regulations and law enforcement hotlists in bustling downtown areas or crowded parking garages poses a significant challenge for officers, especially when vehicles back in, obstructing license plate visibility. Vehicle-based ALPR systems face challenges as they struggle to read plates in such scenarios, forcing officers to exit the vehicle and manually input license plate information into the onboard software to validate every license plate.

Access your ALPR system from your mobile

Plate Finder streamlines the verification process. With a secure connection to an AutoVu Managed Services (AMS) Security Center configuration, you can query parking permits, scofflaws, or law enforcement hotlists with your mobile. Increase efficiency by reducing the time officers spend validating difficult-to-access license plates.

Industry:

Public safety · Parking enforcement

Applications:

Security Center · ALPR

Category:

Operations · Security

Key benefits

Connect your mobile to your automatic license plate recognition system

Validate plates for parking violations and scofflaws using AutoVu Managed Services

Securely send and receive encrypted data from your mobile

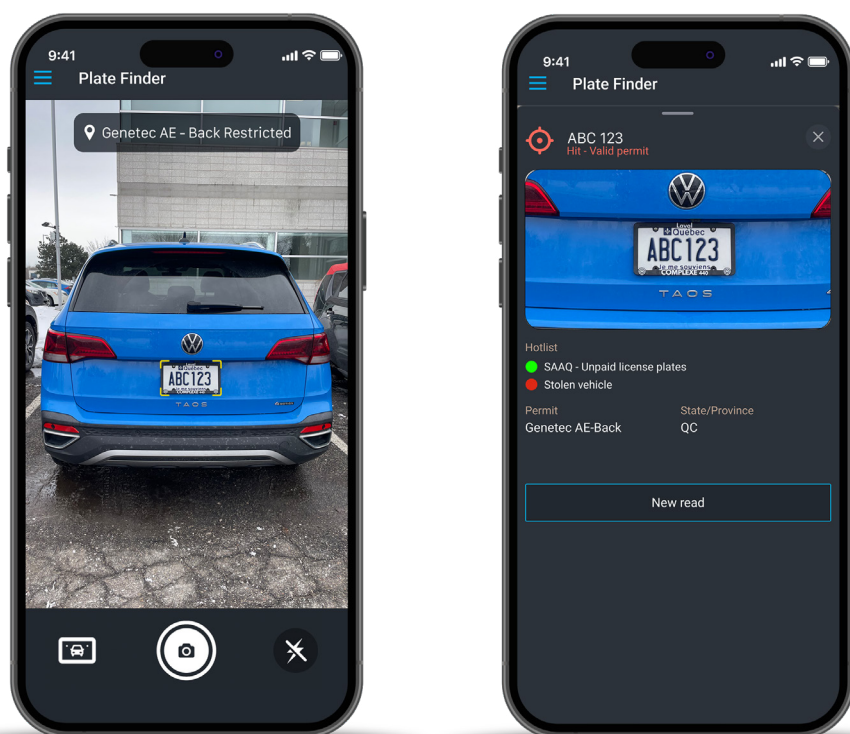

Read license plates on the go using your Android or Apple mobile device's camera

Use your phone's GPS capabilities to find the nearest enforcement zone

Identify vehicles of interest on hotlists for local, state, and federal law enforcement

Benefit from continuous innovation and new features with smooth upgrades that don't impact operations

Access your read history of the last 25 vehicles scanned during your session

Why use Plate Finder?

Reduce manual data entry

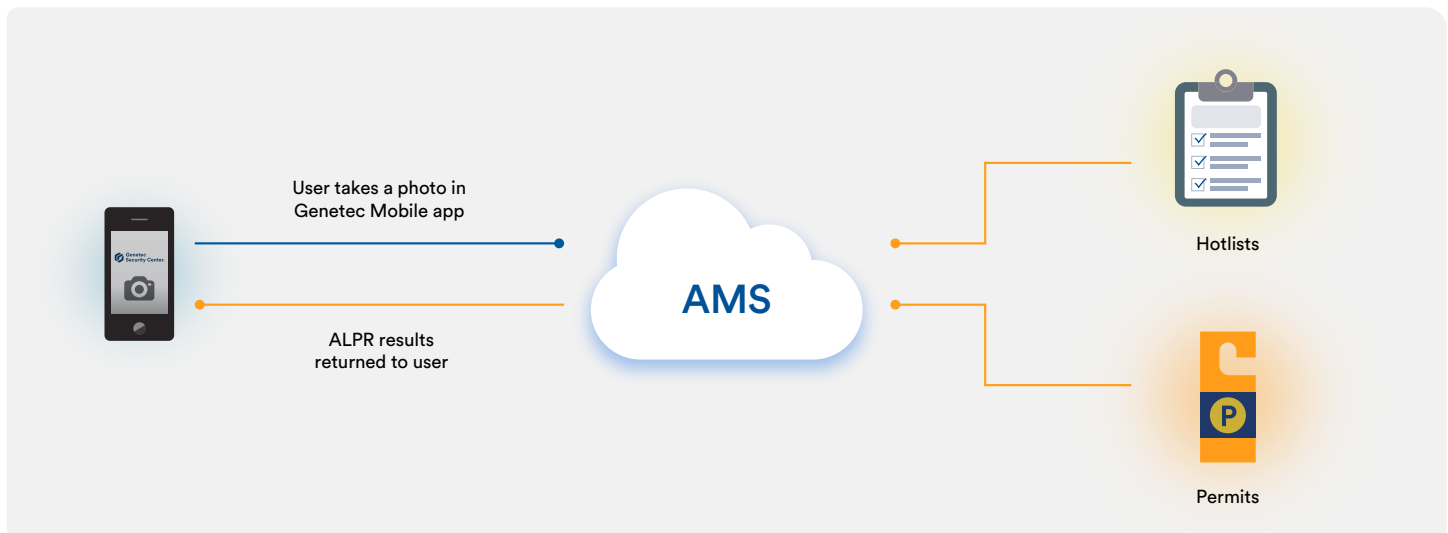

Vehicles with rear-facing license plates backed into parking spots can't be read with vehicle-based ALPR systems. Instead of having officers exit their vehicle and manually take note of the plate number, they can simply take a picture of the license plate using Plate Finder and quickly validate parking rights.

A force multiplier in the palm of your hand

Identifying wanted vehicles can be difficult, with perpetrators trying to hide their license plate while remaining inconspicuous. With Plate Finder, all officers have the power to take a picture of difficult-to-access license plates and locate wanted vehicles whether they are on a local, state, or federal hotlist, like the NCIC.

How it works

Required

- AutoVu Plate Finder subscription
- AutoVu Managed Services running Security Center 5.12.0 or later
- iPhone with iOS 11.0 or later or Android Mobile 13+
- Active internet connection

Note: Only license plates from Canada and the US are currently supported.
