

Safe Manufacturing | Worker Down

How Can You Expedite Responses to Workplace Injuries?

Manufacturing plants and production lines are filled with hazards that can result in harm to members of your workforce. Whether a worker is injured on the line, or slips and falls in a back corridor, your people need to respond quickly to provide immediate medical care.

Operational View

Detect

AUTOMATED WORKER DOWN ALERT SENT

Man Down feature on radio detects a fallen worker in a remote area of the plant and automatically sends an alert over the radio network to security and operations.

Analyze

REAL-TIME VIDEO VERIFICATION PERFORMED
Control room operator receives the emergency alert, verifies the location of the worker and uses live video to evaluate and monitor the circumstances of the incident.

Communicate

NOTIFICATION COMMUNICATED
Based on predefined protocols, the plants' emergency response team is dispatched to assist the downed worker and find them quickly utilizing real-time location data.

Respond

FIRST RESPONSE DISPATCHED
On-site or local first responders arrive to provide medical attention. An incident is logged with pre-populated fields and relevant data for analysis and claims.

Technology View

Detect

MOTOTRBO Radios with MDN-enabled Emergency Button and Man Down Notifier (MDN) Platform

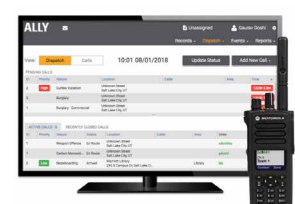

Analyze

Avigilon Camera Identity Search w/Control Center and CommandCentral Aware Enterprise (CCAIE)

Communicate

CCAIE, Avtec Dispatch System, and WAVE PTX Radio Comms w/PTT, GPS, and Multimedia Sharing

Respond

Critical Connect Interoperability and Ally Incident Management Applications
