

Genetec Web App

A lightweight, intuitive interface for your security

Keep an eye on what's important, no matter where you are

More and more people require access to your facilities' security system as part of their responsibilities. However, providing a full setup to all these stakeholders can expose your facility unnecessarily. It can be risky, and setting up a complete workstation for everyone needing access to a part of your security system is complicated and expensive.

Now with the Genetec™ Web App, providing defined access to your security system has never been easier. This lightweight interface can be deployed on any machine with a browser. You can monitor your security system and quickly respond to incidents from anywhere. Whether it is monitoring nearby entrances, investigating incidents, or remotely checking up on your business, Security Center users can stay up to speed through the Genetec Web App.

Applications:

Video surveillance, Access control, Incident management

Key benefits

Monitor your Genetec video surveillance, access control, and alarms from anywhere

Stay on top of potential issues from your everyday device

Quickly figure out what happened through separate and unified reports

Keep track of team members' location on maps with Genetec Mobile

See all active incidents with Genetec Mission Control™

Take ownership and resolve active incidents using standard operating procedures

Why use the Genetec Web App?

Get peace of mind, on the go

Keep an eye on your security system from work, home, or anywhere in between. Not tied to a resource intense workstation or a Security Operations Center, Genetec Web App allows you to monitor your security activities from anywhere.

Stay connected wherever you are

Tackle specific tasks and keep an eye on activities throughout your facility without distraction from your day-to-day. Monitor nearby entities and prioritize key events so you never miss what's important.

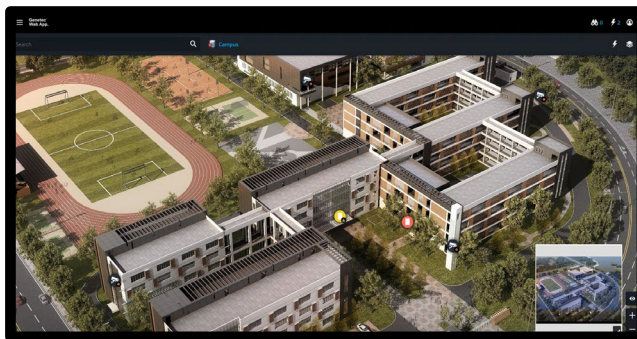

Handle threats without missing a beat

Deal with incipient threats faster thanks to the seamless coordination of the Genetec Web App. You can quickly investigate what's happened under your watch, no matter what the source.

Key features

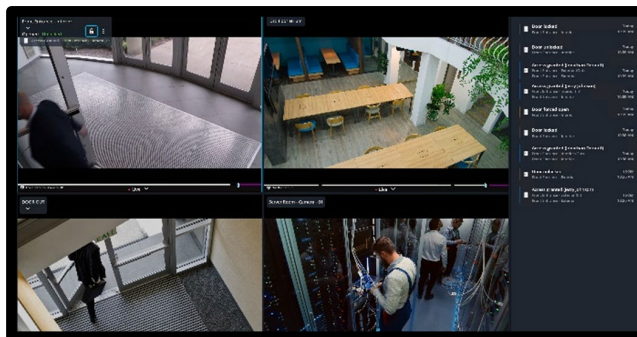

Maps, mini maps and global search:

Monitor your facilities through any preconfigured Security Center map whether it's a floor plan or a geographic map. Operators can filter by layer to abstract away from the broader information and turn their focus to the task at hand. Mini maps and the search function make navigating large site maps a breeze.

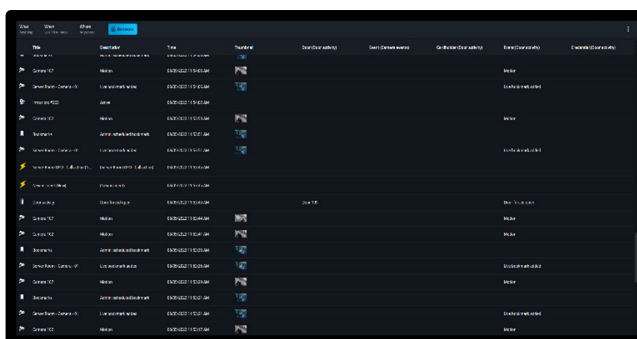

Watchlist:

Operators can select specific entities, to bring up all relevant events. These events will be available in a special monitoring pane, no matter the task currently at hand. Watchlists help you prioritize, so that important events from entities of particular interest will always appear at the top.

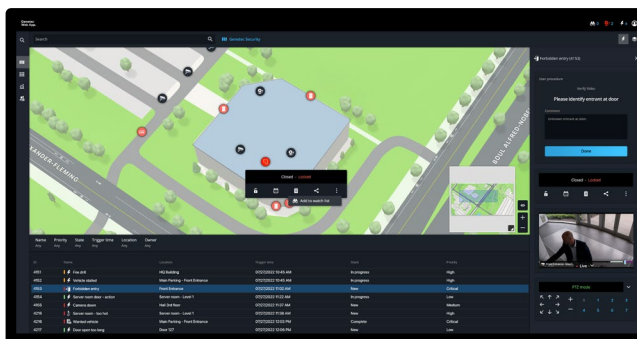

Unified reports:

Operators can easily investigate events where very little is known about what happened except for where and when it occurred. Unified reports make it possible to focus on specific types of events or launch a report of everything within a specific area and time range. Simply select what, when and where to launch your investigations.

Incident management:

Operators can trigger or take ownership of incidents, complete standard operating procedures, or collaborate with colleagues without being at a dedicated workstation. The Genetec Mission Control™ solution guides staff through incident responses whether they are in the Security Operations Center, on the ground or even at home.

The Genetec Web app is compatible with the following browsers:

Google Chrome

Microsoft Edge

Firefox
