

Safe Manufacturing | Hazardous Risk Areas

How Can You Monitor Access to Restricted Areas?

Many manufacturing environments have hazardous or otherwise restricted areas that only authorized employees wearing approved personal protective equipment are allowed to enter for specific periods of time to limit exposure to toxic or otherwise dangerous environments.

Operational View

Detect

EMPLOYEE ENTERS MONITORED AREA

A member of your production team enters a hazardous area that is monitored by video at all times without any visible protective gear.

Analyze

EMPLOYEE APPEARANCE ANALYZED

Security quickly assesses relevant video for situational awareness and receives an alert that employee is not wearing a protective mask.

Communicate

NOTIFICATION COMMUNICATED

Operations center is notified of event, employee is contacted by radio to vacate area, and safety supervisor is dispatched to location to redress the issue.

Respond

EMPLOYEE LOCATED & INCIDENT RECORDED

Employee is located, and condition confirmed OK. Reports are run weekly to monitor violations and assess need for additional safety training.

Technology View

Detect

Avigilon Video Security Cameras with Automated Face Mask and Presence Detection

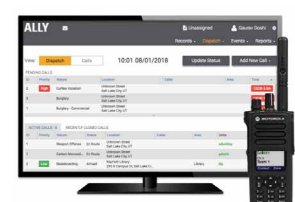

Analyze

Avigilon Cameras and Control Center w/Video Analytics, Focus of Attention, and Radio Alerts

Communicate

Avtec Dispatch System and WAVE PTX Radio Communications w/PTT and Multimedia Sharing

Respond

ALLY Incident Management Software and Push-to-Talk (PTT) Radio Communications
