W1855 Series 5G Wideband Adapter

2024 - 02 - 19

Designed for fixed locations that require the higher performance of 5G and the flexibility of wireless, the outdoor Cradlepoint W1855-5GC Wideband Adapter ushers in the latest generation of wireless WAN networking. The W-Series is designed to accommodate the latest spectrums, recent innovations, and breadth of new technologies in 5G while delivering enterprise-class scalability standards, comprehensive management, and security.

High Performance Wideband

The W1855-5GC adapters are purpose-built for outdoor deployment in the high-performance low-, mid-band 5G spectrum. To address the tradeoff of lower propagation in the mid-band spectrum, Cradlepoint designed the W1855 Series outdoor adapter to be placed separately from the router for optimal signal reception. The stylized W1855-5GC adapter is less than half the size of the previous outdoor 5G adapter which makes installation easier.

Designed for Enterprise-Class Business

While the performance of 5G is top of mind, the W-Series was also designed with enterprise-class standards for high scalability, comprehensive management, and security. Representing the latest available 5G standards which are a collection of spectrum, technologies, and network infrastructure enhancements, the Cradlepoint 5G edge networking service and endpoints accommodate the diverse deployments of an organization with hundreds or even tens of thousands of sites.

Notable Benefits

- Increase the size and types of your WAN use cases with 5G performance
- Experience the dependability of dual connectivity with simultaneous 5G and 4G connections
- Gain carrier-class connectivity using a software-defined modem and integrated multilevel test and recovery utilities
- Deploy an enterprise-class 5G solution with greater simplicity and confidence with the wizard-based installation application
- Manage the Cradlepoint router and 5G adapter as one entity for singular control and visibility with captive modem
- Evaluate the benefits of your 5G service with value confirmation tools built into the NetCloud Platform
- Deploy within any existing networking or SD-WAN environment

Performance testing was conducted based on requirements as defined in RFC2544 using fixed-frame 1518-byte packets. Throughput results reflect uni-directional UDP traffic with less than 1% packet loss as tested with wired connections. Results do not reflect performance of the cellular wireless operator networks.
