

## Root Grapples

Our root grapples are a necessity in the tree industry, and for contractors clearing lots for home site building. They are ideal for moving logs, brush, rocks or just about any type of debris, which makes them essential tools for storm damage clean up.

All of our units are built from top quality steel and will exceed the lifting capacity of the skid steer machines they are used on. Our grapples feature independently operated cylinder(s) to adjust uneven loads. They also

feature grease fittings at every pivot point.

One feature that separates our Standard and Heavy Duty Root Grapples from our competitor's attachments is that we offer optional bolt on cylinder rod covers to protect the hydraulic cylinder shafts. Most root grapples only have the actual cylinder enclosed and not the shaft. We give you the option to protect both. Anyone that has had debris fall on the cylinder shaft knows what damage this can cause.

### Compact Tractor Root Grapple

Our Compact Tractor Root Grapple is perfect for the compact tractor. These grapples are built strong yet very light weight.

- Rated for under 35 HP
- Designed for compact tractors
- 2" x 10" cylinder

### Ultra Root Grapple

The CID Ultra Root Grapple is a more robust version than our compact version. The independent dual grapple design is a step above the compact tractor single grapple.

- Rated for 35-50 HP machines
- Protected hoses
- 2 x 4 1/2 cylinder
