This role involves working in the Core Engineering Platform team and specifically the Integrations service. We connect with hundreds of different systems with vastly different semantics. You will be working on integrating different systems and abstracting the API and data from and to these systems. This will involve:

- Working with APIs – REST/SOAP/etc.
- Designing high performing cloud-based services
- You will be involved in the full development lifecycle of new features, collaborate with product management to build the analytics platform
- Building a scalable, secure and high-performance data processing service
- Mentor and lead junior software developers

Here are the things that would be ideal for this position, but as a people-first company, we see beyond your current skillset today, we welcome all people's multitude of experiences!

1. Input job description
2. SeekOut Assist generates candidates
3. You refine the candidate pool

## Personalize initial outreach

SeekOut Assist pulls data from both your job description and the candidate profile to draft a relevant and personalized message to each candidate.

Would you be interested in joining Seekout as a Software Engineer? 1 of 3 Try another subject

Hi Andre,

We came across your impressive work as a Software Developer regarding a job opportunity at Seekout. We believe that your skills are a great fit for the Software Engineer role.

As a Software Engineer at Seekout, you will be working in the development lifecycle of new features, collaborating with product management, and mentoring and supporting junior engineers.

At Seekout, we value an inclusive and supportive company culture where everyone can thrive.

We would love to discuss this opportunity further with you. Are you available for a call next week?

Best regards,
