

A-ISE sc PROBE WITH RFID TECHNOLOGY

Applications

- Wastewater

Single ISE probe for the on-line measurement of Ammonium provides trending information with minimal maintenance at an affordable price.

Cost-Effective Trending Information

The A-ISE sc Sensor utilizes ion selective electrode (ISE) technology to provide your plant with high level trending information while saving money by eliminating the need for reagents and sample preparation.

Minimal Maintenance with Simple Cartridge Replacement

The sensor operates within in a Cartrical™ cartridge that comes factory calibrated so little maintenance is necessary. Cartridge replacement is simple: unscrew the old cartridge, plug in the new one, and the sensor is ready for measurement. Using RFID* technology, the factory calibration is automatically identified after replacing the cartridge.

Simple, Accurate Calibration

Easy to perform, fail-safe calibration corrections compensate for naturally occurring calibration drift in ISE instruments. An advanced menu structure allows you to perform corrections without manual entry of values via Ethernet, SD card or Bluetooth®.
