DATA SHEET

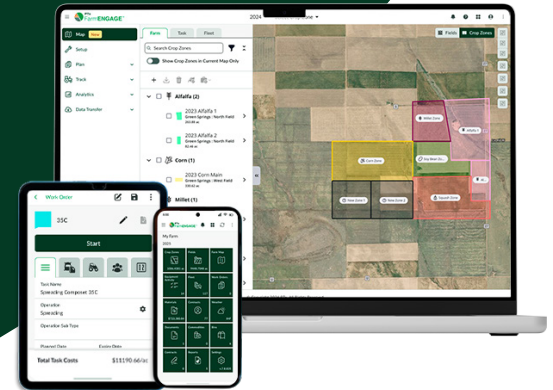

Farm operations management platform supporting all equipment brands

PTx FarmENGAGE™ is the next generation of farm operations management software built to bring simplicity, connectivity, and control to your entire fleet. No matter the equipment brand, FarmENGAGE empowers you to manage every aspect of your operation from the field or the office, using the machines you already own, regardless of make or model year.

With powerful tools for fleet tracking, job monitoring, and data management, FarmENGAGE keeps your operators productive, your equipment visible, and your workflows efficient. Formerly known as PTx Trimble Ag Software, this platform is designed to help you focus on what matters most: getting the job done right.

Key Features

- Create, manage and sync all field and job data and work orders to connected machines
- View machine location, history, status and tasks in progress
- Import and export data in any OEM format to fit your workflow
- Automatically collect task records for reporting

Unified Resource Management

Create, manage, send and sync resources for fieldwork from any connected device across your farm, including factory-fit terminals for AGCO machines and PTx Trimble displays, increasing uptime, efficiency and repeatability. The intuitive web interface enables farmers to manage all their field data within the FarmENGAGE platform, improving work quality and outcomes while reducing the chance of operator errors.

Streamlined Data Routing

A simplified syncing feature delivers the exact resources needed to perform a desired activity to a specific vehicle, without impacting (or syncing to) other displays and operators. Send specific resources to an individual device, eliminating the need to manually move data with USB drives or requiring field boundaries and AB lines to be recreated.

Optimized Communication and Planning

Thanks to live updates, the ability to send prescription files, and work order capabilities, you can make sure your team has the information they need to tackle their to-do list and get it right the first time.

Centralized Data Management

Data sharing features, including the ability to import and export data in any OEM format, allows you to save time setting up displays for field work, quickly compile and review as-applied records, and deliver the right data to the right machine in the correct format every time.

Third-Party Data Collaboration

FarmENGAGE supports data compatibility, connectivity and data exchange with other third-party farm management software platforms, including FendtONE offboard and NEXT Farming Live as well as those from John Deere, Raven, Case IH, New Holland, and more.

SOFTWARE COMPARISON

Feature	Data	Operations
Farm Setup		
Number of user logins included ¹	Up to 5	Up to 5
Create and manage clients, farms, and fields	✓	✓
Create and manage boundaries, guidance lines, and landmarks	✓	✓
Create and manage materials	✓	✓
Create and manage vehicles, implements, and devices	✓	✓
Import display resources and tasks from USB	✓	✓
Access display resources and tasks from connected 3rd party applications	✓	✓
Send selected resources and tasks to connected 3rd party applications	✓	✓
Send selected resources to connected terminals	✓	✓
Synchronize resources between Precision-IQ displays and the cloud		✓
Farm Operations		
Track current and recent equipment location and status	✓	✓
View historical status of equipment in the field		✓
View task data across the entire farm operation	✓	✓
Create Work Orders in web or mobile for remote task set-up, monitoring, and execution		✓
Configure operator access to Precision-IQ display functionality		✓
View current weather conditions, forecasts, and historical conditions		✓

Feature	Data	Operations
Farm Records		
Automatically receive and view tasks and summaries in the cloud	✓	✓
Generate task reports with details and coverage maps	✓	✓
Share task records to connected 3rd party applications	✓	✓
Export task records in industry standard formats for use in 3rd party applications	✓	✓
Create details records for in-field operations		✓
Plan crop rotations across multiple seasons		✓
Track material usage		✓
Create reports for profitability, product usage, and scouting events		✓
Track harvest events across the entire farm operation including yield and price		✓
Agronomy Tools		
Send prescriptions to connected terminals	✓	✓
Create and manage management zones		✓
Create and manage prescriptions		✓
Record crop scouting events including georeferenced photos and point data		✓

¹ Additional user logins can be purchased separately
