

12V Transformer	
Voltage	12V dc
Amps	8.0 A
Watts	96 W

This test report was conducted in a controlled environment but there are other factors that can affect the surface temperature of the rail. Understand that results will vary depending on the finish of your ladder, the humidity of the room and the temperature of the room. The results show temperatures of the ladder **with a towel** and **without a towel** as the temperature rises from 16°C to 25°C (see graph below).

Note: Temperatures are nominal measurements only
