Epipremnum (Pothos) is a vining plant that typically grows in a trailing or climbing pattern. Naturally found on Mo'orea Island, in French Polynesia.

LIGHT

Avoid direct sunlight, but provide at least four hours of bright to medium bright light. They are highly adaptable to most environments.

WATER

Average water needs, but can be on the drier side between waterings

FERTILIZER

Feed once per month at half strength when plant is actively growing in spring and summer. When days get shorter, reduce fertilizer and water.

GROWTH

Epipremnum are fast-growing vines with thick, upward growth. They grow best on a pole or support. If left unsupported, the lush foliage will cascade beautifully downward, making it perfect in a hanging basket.
