These are the perfect houseplant vessels for the new or experienced gardener. This virtually care-free houseplant can be placed anywhere in the home.

LIGHT

Indirect low to medium light, never in direct sun

WATER

Add water (if needed) every 1-2 months with clean distilled water, keep cork in place.

FERTILIZER

No need, these plants are super-charged at the grower level to last for over a year in these vessels.

GROWTH

Super slow growing to maintain their neat appearance - root growth is fun to watch through the glass and can naturally self-prune.
