Epipremnum (Pothos) is a vining plant that typically grows in a trailing or climbing pattern. Naturally found on Mo'orea Island, in French Polynesia.

### **LIGHT**

Avoid direct sunlight, but provide at least 4 hours of bright to medium bright light. They are highly adaptable to most environments.

### **WATER**

Average water needs, but can be on the dryer side between waterings

### **FERTILIZER**

Feed once per month at half strength when plant is actively growing in spring and summer. When days get shorter, reduce fertilizer and water.

### **GROWTH**

Pothos are fast-growing vines with thick, upward growth. They grow best on a pole or support. If left unsupported, the lush foliage will cascade beautifully downward, making it perfect in a hanging basket.
