CLOUD-BASED **DIGITAL PLATFORM**

TRANSFORM INSPECTION DATA INTO ACTIONABLE INSIGHTS

Centrix™ inspection analytics converts inspection data into interactive dashboards that provide real-time visibility into fleet condition, asset wear, connection performance, and operational trends. Eliminate spreadsheets and manual analysis while gaining instant access to the information needed to improve asset integrity and maximize equipment life.

NEW FEATURE RELEASE

Inspection Analytical Dashboard

Key Features

- Final tool classification analytics
- Connection classification analytics
- Hardband classification analytics
- RBW% and remaining life monitoring
- Wear trend analysis
- Comparative analytics compares performance by rig, basin, connection, tool type, and benchmark against peer performance

Customer Value

- Reduced non-productive time
- Identifies high-risk assets before they reach the rig
- Extends asset life
- Use wear-rate analytics to make informed repair and retirement decisions
- Improved maintenance planning
- Forecast future repair requirements using historical trends
- Increased operational visibility
- Access fleet performance data anytime, anywhere
- Make data-driven decisions
- Replace assumptions with measurable asset integrity metrics
