

Healthcare Coverage

Overview

Medical malpractice claims can cause considerable financial loss for your client due to high settlement amounts, legal fees, and defense costs. That is why our brokers here at Synergy take the time to review the complexity of your clients' operations to make sure they are covered for all their applicable services. We also make it a priority to stay current on the constantly evolving legal landscape to be sure our clients are covered properly based on current events, common claims, or high settlements. Many of our carriers also provide risk management and loss prevention services to help our Insureds navigate these tough situations.

The last thing your client should be worried about as a healthcare provider is if they will be sued. Medical malpractice insurance provides your clients with the comfort and assurance that they are protected against claims of neglect or injury so they can focus on providing the best services to their patients.
