

# Benchmark Gensuite® Sustainability Prospector

Save Money by Saving the Planet

## Discover What Sustainability Prospector Can Do For You

Identify big opportunities with your team

Efficient energy resource utilization optimizes production and drives down costs, enhancing business profitability while protecting our planet. Sustainability Prospector, from Benchmark Gensuite's Sustainability suite, enables cross-functional teams to assess resource utilization by site or operation. Commonly referred to as Energy Treasure Hunts or Kaizan events, the process begins with teams conducting site audits to identify processes for potential energy/resource reductions and cost savings opportunities.

Sustainability Prospector calculates common processes to estimate a resource baseline and analyze alternatives, which can be ranked by return on investment (ROI), magnitude of reductions, and other factors, and reported to management using built-in reporting tools. And, when integrated with the other tools in the Sustainability suite, users can gain insights to replicate project impact success across sites.

- ▶ Identify energy, cost & resource savings
- ▶ Use built-in calculators to estimate precise cost & resource savings across electricity, natural gas, steam, compressed air, water, and chilled water
- ▶ Analyze current vs. proposed utilization & costs based on project details
- ▶ View a performance summary of each team's treasure hunt progress/results
- ▶ Generate reports to compare opportunities and summarize key findings
- ▶ Manage ongoing reporting of energy/resource reduction project ideas, in addition to focused treasure hunt efforts

# Identify, analyze and improve with Sustainability Prospector

Sustainability Prospector utilized at  
200+ sites for energy treasure hunts

12,500+ energy-saving  
prospects/ideas logged

## 3 Day Agenda

### Day 1

Establish treasure hunt  
teams and brainstorm  
energy reduction ideas

### Day 2

Investigate & measure  
site energy use and  
natural resource  
consumption

Quantify prospects  
using online  
calculators

### Day 3

Compare and analyze  
prospects between  
teams

Compile & report  
to management to  
assign action

## Mobile Treasure Hunts

You now can use your Mobile device, on or offline, to  
complete sustainability treasure hunts at any location.

- Quickly log ideas for energy and cost savings
- Calculate energy use on the spot—reviewing machine labels, leak estimates, etc.
- Leverage Mobile capabilities such as photo and video to include with findings
