FuelerPlus

Fuel Tracking Software for Construction

Managing fuel consumption can be a challenge due to the number of different systems used to capture fuel data from different resources.

HCSS FuelerPlus gathers data from all of your different systems and delivers that data in an intuitive format. Your company's fuel transactions are displayed in one place — whether you're dealing with fuel dispensed by your trucks or transactions recorded by third-party vendors like Gasboy, Phoenix, or Wright Express.

And it doesn't stop there. **FuelerPlus** can capture everything your fuelers do, including topping off fluids and servicing your equipment. This information can then be collected and exported into your accounting system to eliminated double entry and improve accuracy.

TOP BENEFITS

Get control of your fuel expenses.

Avoid year-end fuel adjustments.

Identify fuel hogs to make smarter sell-versus-repair decisions.

Get a better understanding of your fuelers' time and activities.

Take the Pain Out of Fuel Tracking

Replace Paper Fuel Tickets

FuelerPlus is designed to fit your workflow with little or no disruption. Get faster, more accurate data at the source. Scan barcodes, perform violations checks, and enter time cards, then send the information directly to accounting and payroll with one click, reducing or eliminating double entry.

Analyze Data Across Fuelers

Track costs and usage to make important decisions. The dashboard lets you know which field fuelers have synced their fuel transaction data for the day and which ones are still missing. Fuel distribution trend lines allow you to instantly spot outliers in your fuel patterns. Monitor mixed-container fuel levels so you can quickly call in orders to top off tanks at the yard or job site. Compare actual versus estimated fuel consumption and identify the fuel hogs in your fleet to make smarter purchasing and maintenance decisions.

Reports that Matter

Build custom reports from a complete library of database fields, or use templates organized by fuel type, equipment, fueler, or location. Save and share reports with other **FuelerPlus** users in your company. Produce graphs to accompany reports, and export data to other software programs with just a few clicks.

Work on the Job Site

Capture each fueler's activities right on the job site, including amount dispensed, repairs, meter readings, and duration on the job. Work offline and sync up when you get back to an internet connection, or send real-time data directly to the office when connected.

Connect to Fuel Card Vendors

Import fuel card data, eliminate handwritten entries, and manage fuel cards in one system. **FuelerPlus** integrates with most national fuel card vendors to allow you to analyze your fuel card data from multiple sources in one convenient location.

HCSS SOFTWARE INTEGRATION

HCSS software is designed to work together to help your business run more efficiently. Data is accessible between products, reducing manual entry and increasing productivity.
