

Follow these instructions to make your very own bioluminescent creature lantern

Materials needed:

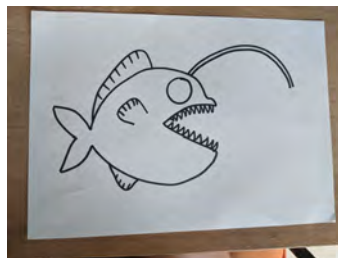

- Paper
- Pencil, pen or marker
- Scissors
- Tape

Optional:

- Cellophane
- Coloured pencils/markers
- Light or candle

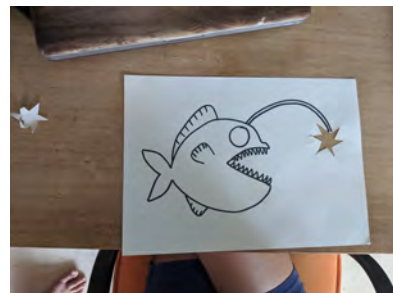

Step 1:

Draw your bioluminescent creature.

Step 2:

Use the scissors to cut out the parts you want to light up.
You can also use a pencil or a needle to poke small holes.

Step 3A:

Stick the paper to a window

Step 3B:

Turn the sheet of paper into a cylinder by sticking the opposite ends together.
Place in a light or candle in the middle of it.

Optional: Add some cellophane to the cut out sections to give it some colour!

Note: if using a candle, make sure to have an adult with you and that the candle is covered so the paper is protected from the flame.
