The NeoMetal Difference

At NeoMetal, we are bold in our efforts to revolutionize the piercing industry and are proud to be the inventors of threadless jewelry. Innovation and unique solutions drive us forward, and the piercing industry is our guide. Our mission is to manufacture the highest quality body jewelry on the market while remaining focused on accessibility, best in class customer service, competitive pricing, and the fastest shipping times in the industry.

Our jewelry is manufactured in California from the highest quality materials available and is safe for new and healed piercings. The majority of our jewelry is made out of ASTM F-136 certified implant-grade titanium, a hypoallergenic and biocompatible material. Our 18K gold jewelry is nickel-free and reinforced with an ASTM F-138 stainless steel pin to maintain tension for a secure fit over time. We use only the highest quality cubic zirconia and other synthetic gems, in addition to genuine stones, and never use any glues or adhesives.

AT THE BEST PRICE

What is threadless and how does it work?

Threadless jewelry, sometimes called push-fit or press-fit jewelry, was invented by NeoMetal in 1997. It doesn't have any threaded pieces; instead, the decorative end and labret post or barbell are held together by tension. NeoMetal threadless jewelry is universal, meaning any of our decorative ends fit universally into an 18ga, 16ga, 14ga, and 12ga post or barbell.

How-To: Pin Bending and Insertion

Below is a basic guide that works for most ends.

STEP 1: Insert the pin about one third of the way into the shaft.

STEP 2: Bend the pin between 10–20 degrees. For a tighter fit, bend further than 20 degrees.

STEP 3: Push pin fully into the shaft to attach the pieces.

STEP 4: For removal, pull apart the end from the shaft. If the jewelry feels tight, add a slight twisting motion while you pull out the removable end.

Additional Threadless Bends* and SKU Information

Curved Barbell

Circular Barbell

Insert a straight pin into the end of the barbell and push until flush. An additional bend at the 1/3 or 1/2 mark can be added if necessary.

*Please note that these are suggestions only and the physical process may vary per application. None of the images are to actual scale and are for demonstration purpose only.

Counterbore Information

A counterbore is a shallow recess drilled onto a bead or decorative end, which allows the barbell shaft to “sink” into place when a piece is assembled.
