

WHAT TO EXPECT FROM A STRONG PARTNER

Organizations like yours are striving to achieve the trifecta: sustainability, resilience, and growth. You may be exploring clean versions of essential systems and working to stabilize operational costs and create green facilities. You don't have to evolve into the decarbonized era alone. A carefully selected technology partner can simplify the complexities to plan, design, engineer, and construct solutions that work today and well into the future. Here are four things to expect from a strong partner.

Expect a Dream Team

You are unique, and so are your goals. A one-size-fits-all partner just won't work. Select a partner who can customize a dream team of subject matter experts with relevant experience on projects similar to yours. Adaptability counts. A strong partner needs to be able to quickly scale up or down to right-size staffing and materials for cost-efficiency, especially on large programs with several sites.

Expect a Local Presence

A partner with nationwide resources understands your corner of the world. A nearby team moves quickly to support you, and familiarity with state and local regulators and suppliers speeds permitting, utility, and vendor processes. A local team is invested in community relations because they are part of the community. They will be more aware of citizen concerns and able to mitigate disruptions to the surrounding communities.

Expect Transparency and Collaboration

Collaboration is an essential part of nurturing a trust-based relationship between partners. The right partner will understand your organizational goals and culture and become an extension of your staff sharing your goals. It's important to provide frequent mutual feedback on team performance and process to pivot away quickly from approaches that aren't hitting the mark.

Expect Integrated Solutions

In the Internet of Things era, clean solution integration—from the electric vehicle charger to the solar panel—is essential for a truly optimized, future-proofed system. A strong infrastructure partner understands not only the solutions you need to meet your goals, but the complex interfaces of the connected solutions. With this kind of partner, your projects yield the desired outcomes.
