Low-energy LED curing in the spotlight

EkoCure[®]

**With Dual Cure technology,
the transition is simple!**

***Flint*Group**

Printers have more plates to spin than ever before; volume and throughput are paramount, but cannot come at the cost of quality, precision and sustainability.

Naturally, businesses are looking to find new efficiencies from their supply chains, and put innovations in place that can deliver speed, accuracy and reduced energy-use in one package.

Curing is taking centre stage, and for a growing number of printers that means switching from traditional UV lamps to UV LED.

Driven by heightened demand for speed, the phasing out of mercury in waste regulations (found in UV lamps) and rising energy costs, the race is on for printers to make the switch.

Has your business seen the light?

LED curing brings:

- Boosted energy efficiency - up to 80%
- Enhanced productivity
- Superb cure quality and consistency
- Reduced maintenance and associated costs
- Reliable curing without lamp degradation
- Lower running temperature

Why EkoCure®?

Drive down
energy costs

Minimise
waste

Run
faster

Increase
volume

Shorten
lead times

Heighten
press agility

Make the
conversion
simple

Rely on Flint Group to deliver

EkoCure® F

A versatile UV LED curable flexo ink, EkoCure® F is the ideal combination of quality, cost and LED energy savings.

EkoCure® ANCORA

Ideal for the stringent demands of food labels and flexible packaging, EkoCure® ANCORA can be used in all narrow and mid web flexo print units.

EkoCure® ANCORA F2

EkoCure® ANCORA F2 is a simple, cost effective choice optimised for FCM label printing. Features include advanced curing speed, improved rheology and lower viscosity, delivering ultimate press performance for long runs in chambered doctor blade systems.

All with Dual Cure technology
