Co-occurrence of rendering providers

Density of patients seeing multiple providers in a service year

PROVIDER #1

PROVIDER #250

#1

#250
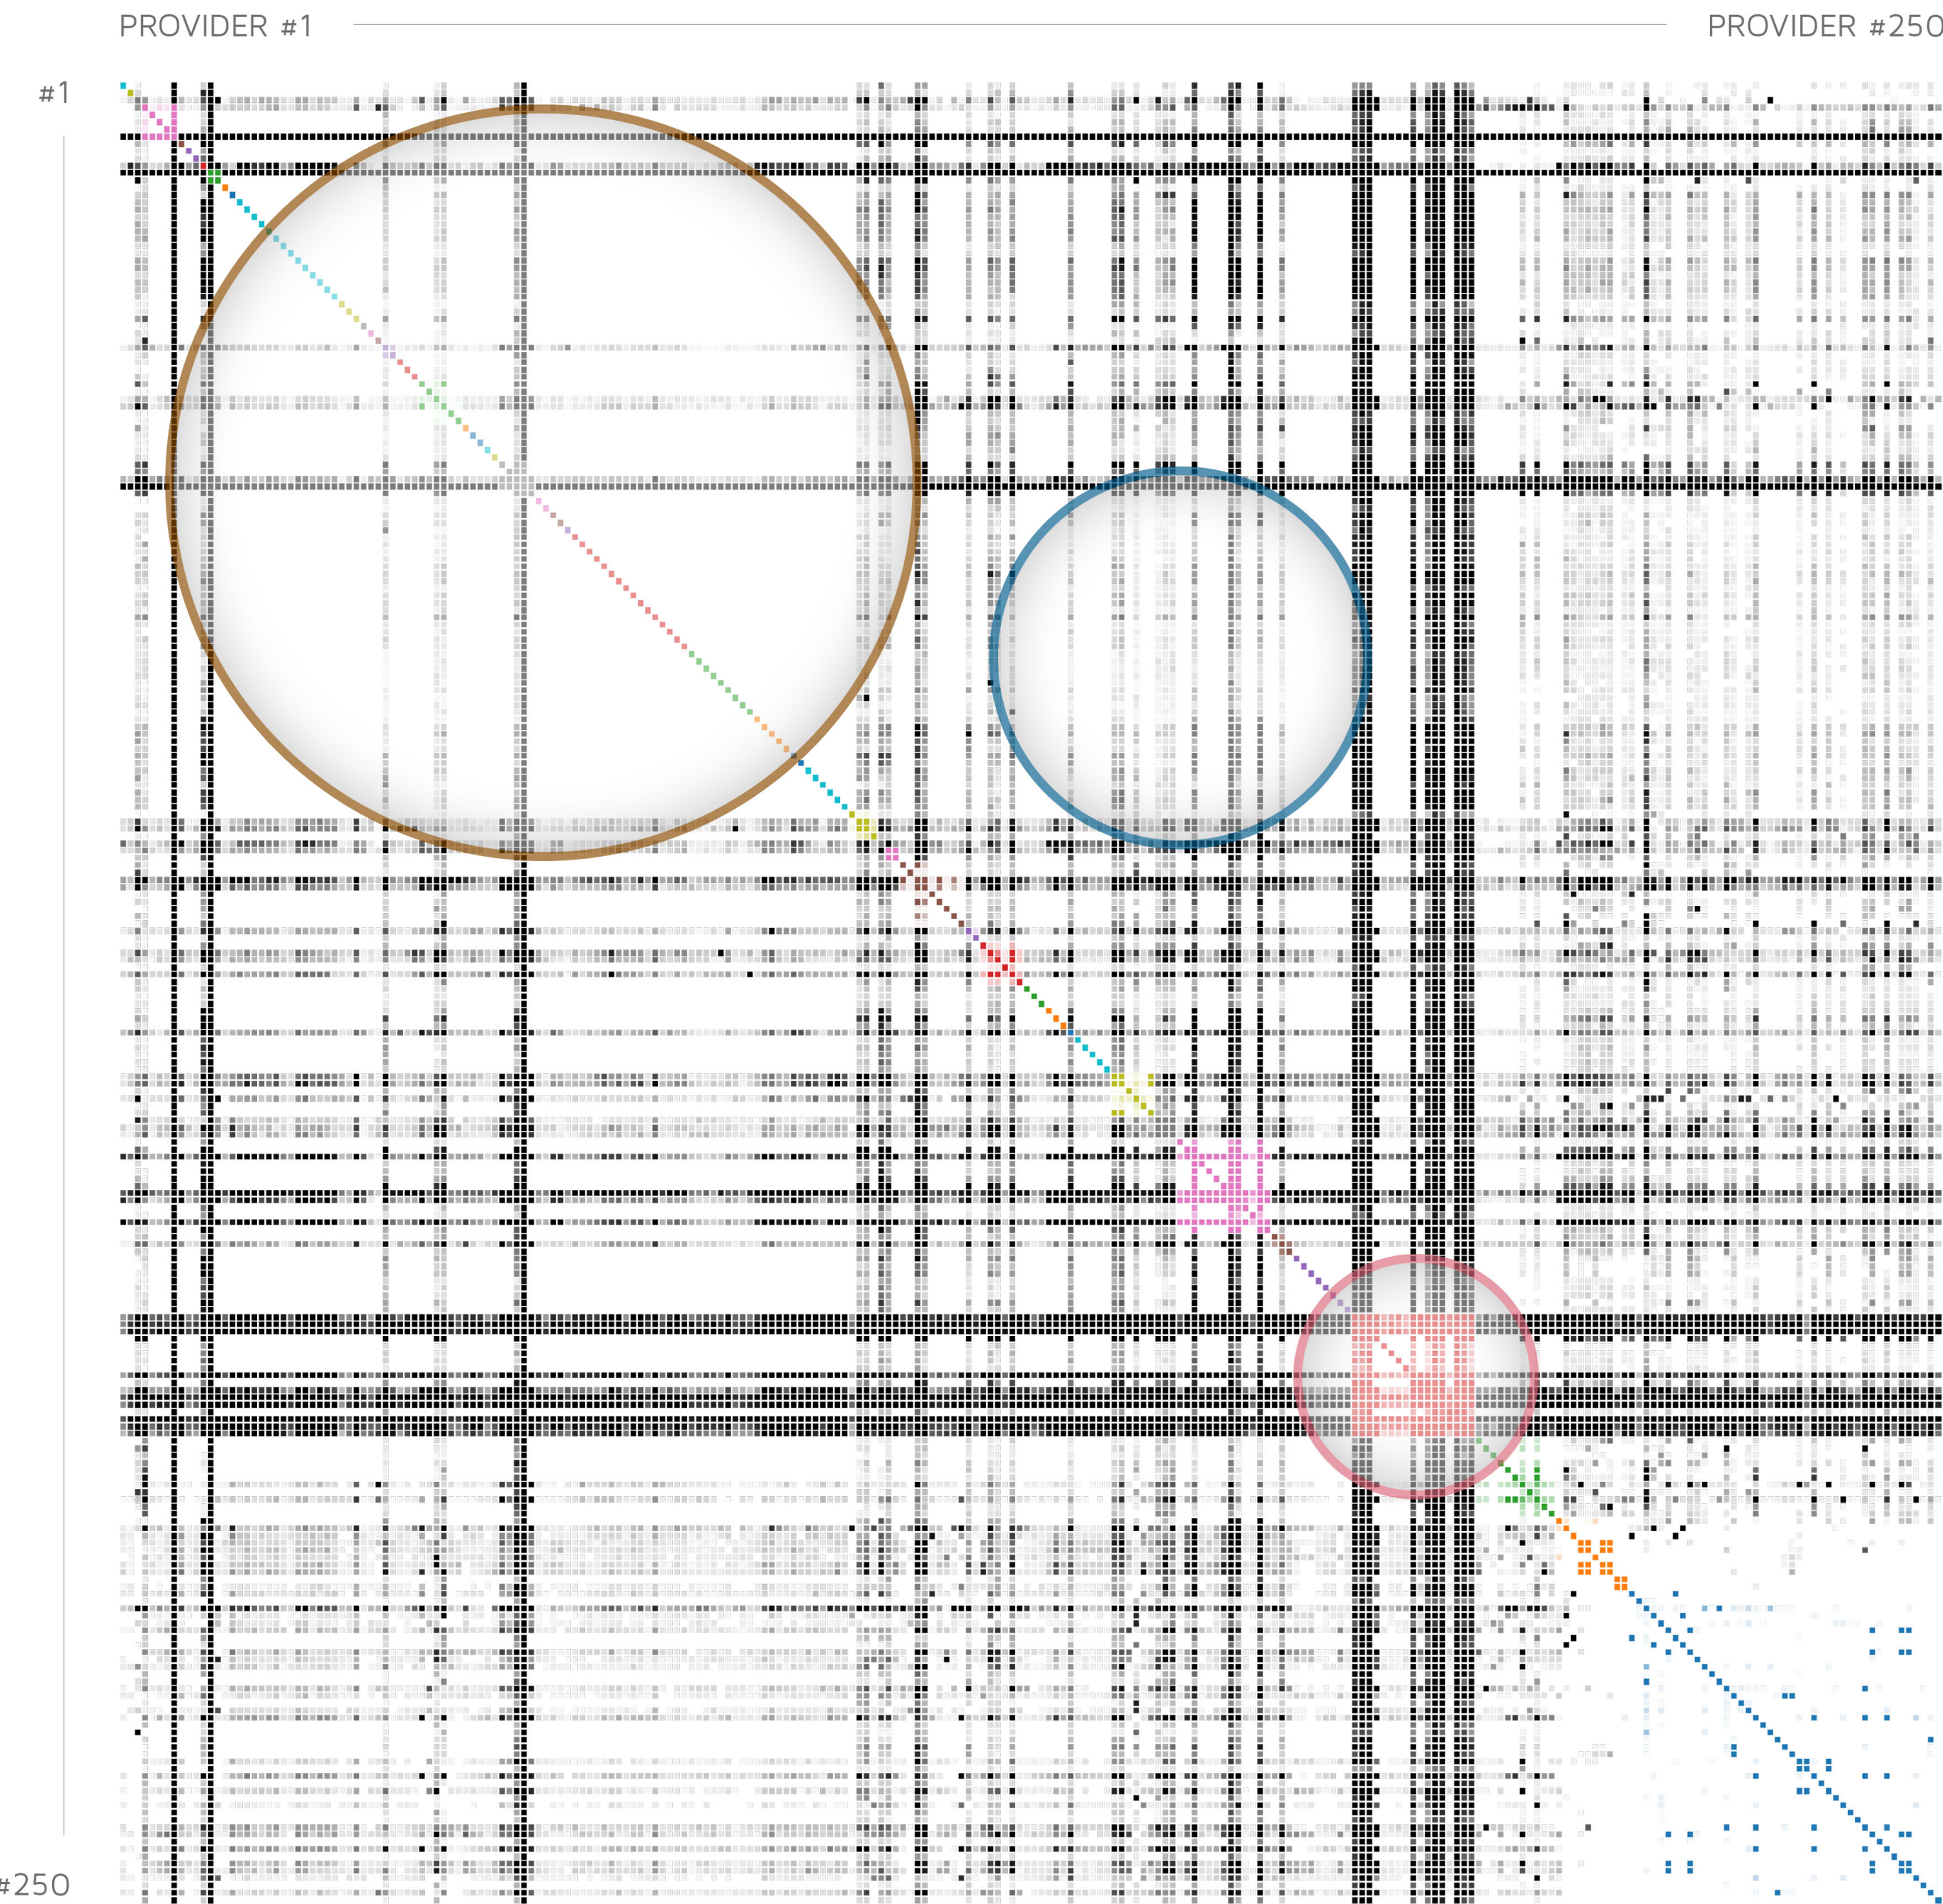

PRIMARY CARE

Large, empty blocks are usually Primary Care, as patients are less prone to travel between Primary Care Providers.

Dense blocks to the right or below represent common referral targets for these PCPs.

POPULAR PROVIDERS

Consistent thick bands represent popular providers, that receive patients from across the care spectrum.

RADIOLOGY

A commonly used specialty, Radiology has fewer provider-to-provider relationships. Patients that seek Radiology in this network typically exercise very little discrimination in where they receive those services.
