

Maximize your investment in Epic

The Arcadia HCC Risk Suspecting App is now available in the Epic App Orchard.

Diagnosis data typically lives in various systems such as EHRs, EHR instances, payer files. Provider actions taken in one place are not always reflected across these systems. Navigating multiple systems for suspected diagnoses is time-consuming and frustrating and can take away from time spent with patients as well as negatively impact risk adjustment performance.

Act on the information that matters most. Surface suspected, historical, and persistent documented conditions at point of care within Epic Best Practice Alert (BPA) workflows. Providers can address these gaps in-visit, without ever leaving Epic.

The Arcadia HCC Risk Suspecting App gives your providers actionable data within existing Epic workflows to prompt action and drive outcomes.

Increase provider satisfaction and decrease burnout

- Seamlessly incorporate suspected diagnoses from Arcadia natively within the Epic HCC Best Practice Alert (BPA) workflow
- Reduce workload and avoid duplication of data

Capture disease burden and impact outcomes at scale

- Built on an integrated payer/EHR data asset, enabling diagnosis suspecting from notes, labs, orders, vitals, and more
- Centralized risk platform enables a “closed loop” for addressing suspected risk gaps

Complement your EHR investment

- HCC Risk Suspecting Integration vetted by Epic and available on the App Orchard
- Enable providers to meet their goals while minimizing IT overhead and security exposure

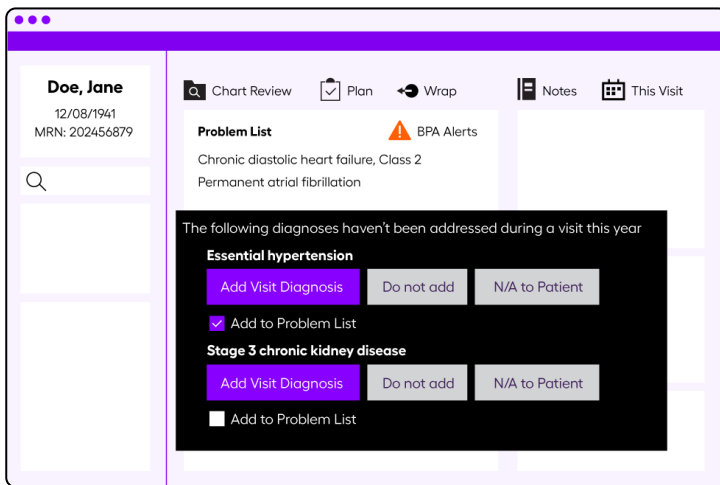

Impact outcomes at scale

Finally, a way to surface actionable population health insights at point of care. Tap into your existing workflows with the Arcadia HCC Risk Suspecting App without ever leaving Epic. Now available in the App Orchard.

Arcadia aggregates claims, clinical, and ancillary data and enriches the data with a proprietary risk suspecting engine.

Diagnosis-level suspected, historical, and persistent documented conditions are surfaced in Epic's BPA HCC Risk Adjustment workflow via FHIR integration.

Suspected diagnoses from Arcadia are automatically written to the Epic problem list, so the clinician only needs to review and reconcile directly within their workflow to generate billable codes.
