New Kardex Megamat

A better customer experience

Following current trends Kardex now launches its flexible and future oriented Vertical Carousel Module Kardex Megamat to improve human-machine collaboration, user experience and ergonomics. The new VCM will ensure added value and various benefits to customers.

Modular & future oriented system

New trends and market developments require action. With the improved technology, interfaces and options of the Vertical Carousel Module, Kardex ensures an increased user experience and provides a flexible and future-proof system that supports various customer requests even better.

The new VCM is developed for you:

- to offer intralogistics processes able to keep pace with business expansion
- to provide flexibility and security for changing demands
- to reduce picking errors in order to minimize returns and keep customer satisfaction high

What's new?

Software Architecture TIC

A modular, future-oriented, and web-based hardware and software platform.

Interface ILA

The new interface enables a future-proof, and stable connection to Kardex Remstar units based on the latest technologies.

User experience

Smooth and smart design of the access opening and a 12.1 multi-touch operator panel with on-screen keyboard. The modern user interface in its attractive tile design convinces with high user-friendliness and ergonomics.

Additional options

Display LED-Navigator improves user guidance and the Kardex VCM Box extends the storage capacity of the new Kardex Megamat even further. The high performance package enables a higher number of cycles during the lifetime and is especially suitable for high performance applications (e.g., order fulfillment).

Future oriented system for a better picking performance and high storage capacity

The new Vertical Carousel Module Kardex Megamat fits perfectly when items with a high picking frequency need to be stored. Based on the paternoster principle, it uses the "goods-to-person" concept.

High-picking performance and accuracy

The Display LED-Navigator supports various picking strategies and provides order information at the right time, on the right place.

Maximum storage space

Full use of space in the carriers due to the VCM Box. Up to 12% higher storage area and up to 20% higher storage volume than other products.

Improved user experience and smart design

The high-resolution multi-touch operator panel with intuitive user interface enables ergonomic operator comfort.

Flexible and future-proof

The modular and scalable system allows the customer to start with basic functionalities and expand them afterwards.
