Display LED- Navigator Retrofit

Retrofit Display LED-Navigator

The Display LED-Navigator is an efficient order picking display-assistant. It's designed to enhance the user's picking experience. It simplifies human-machine cooperation and improves:

- Picking efficiency
- Picking accuracy
- Process reliability

Based on LED Technology, it uses light as a communications tool to provide event-related information at exactly the right time.

What machines can be upgraded?

All machines with a C3000 controller can be retrofitted with the Display LED-Navigator.

How long does installation take?

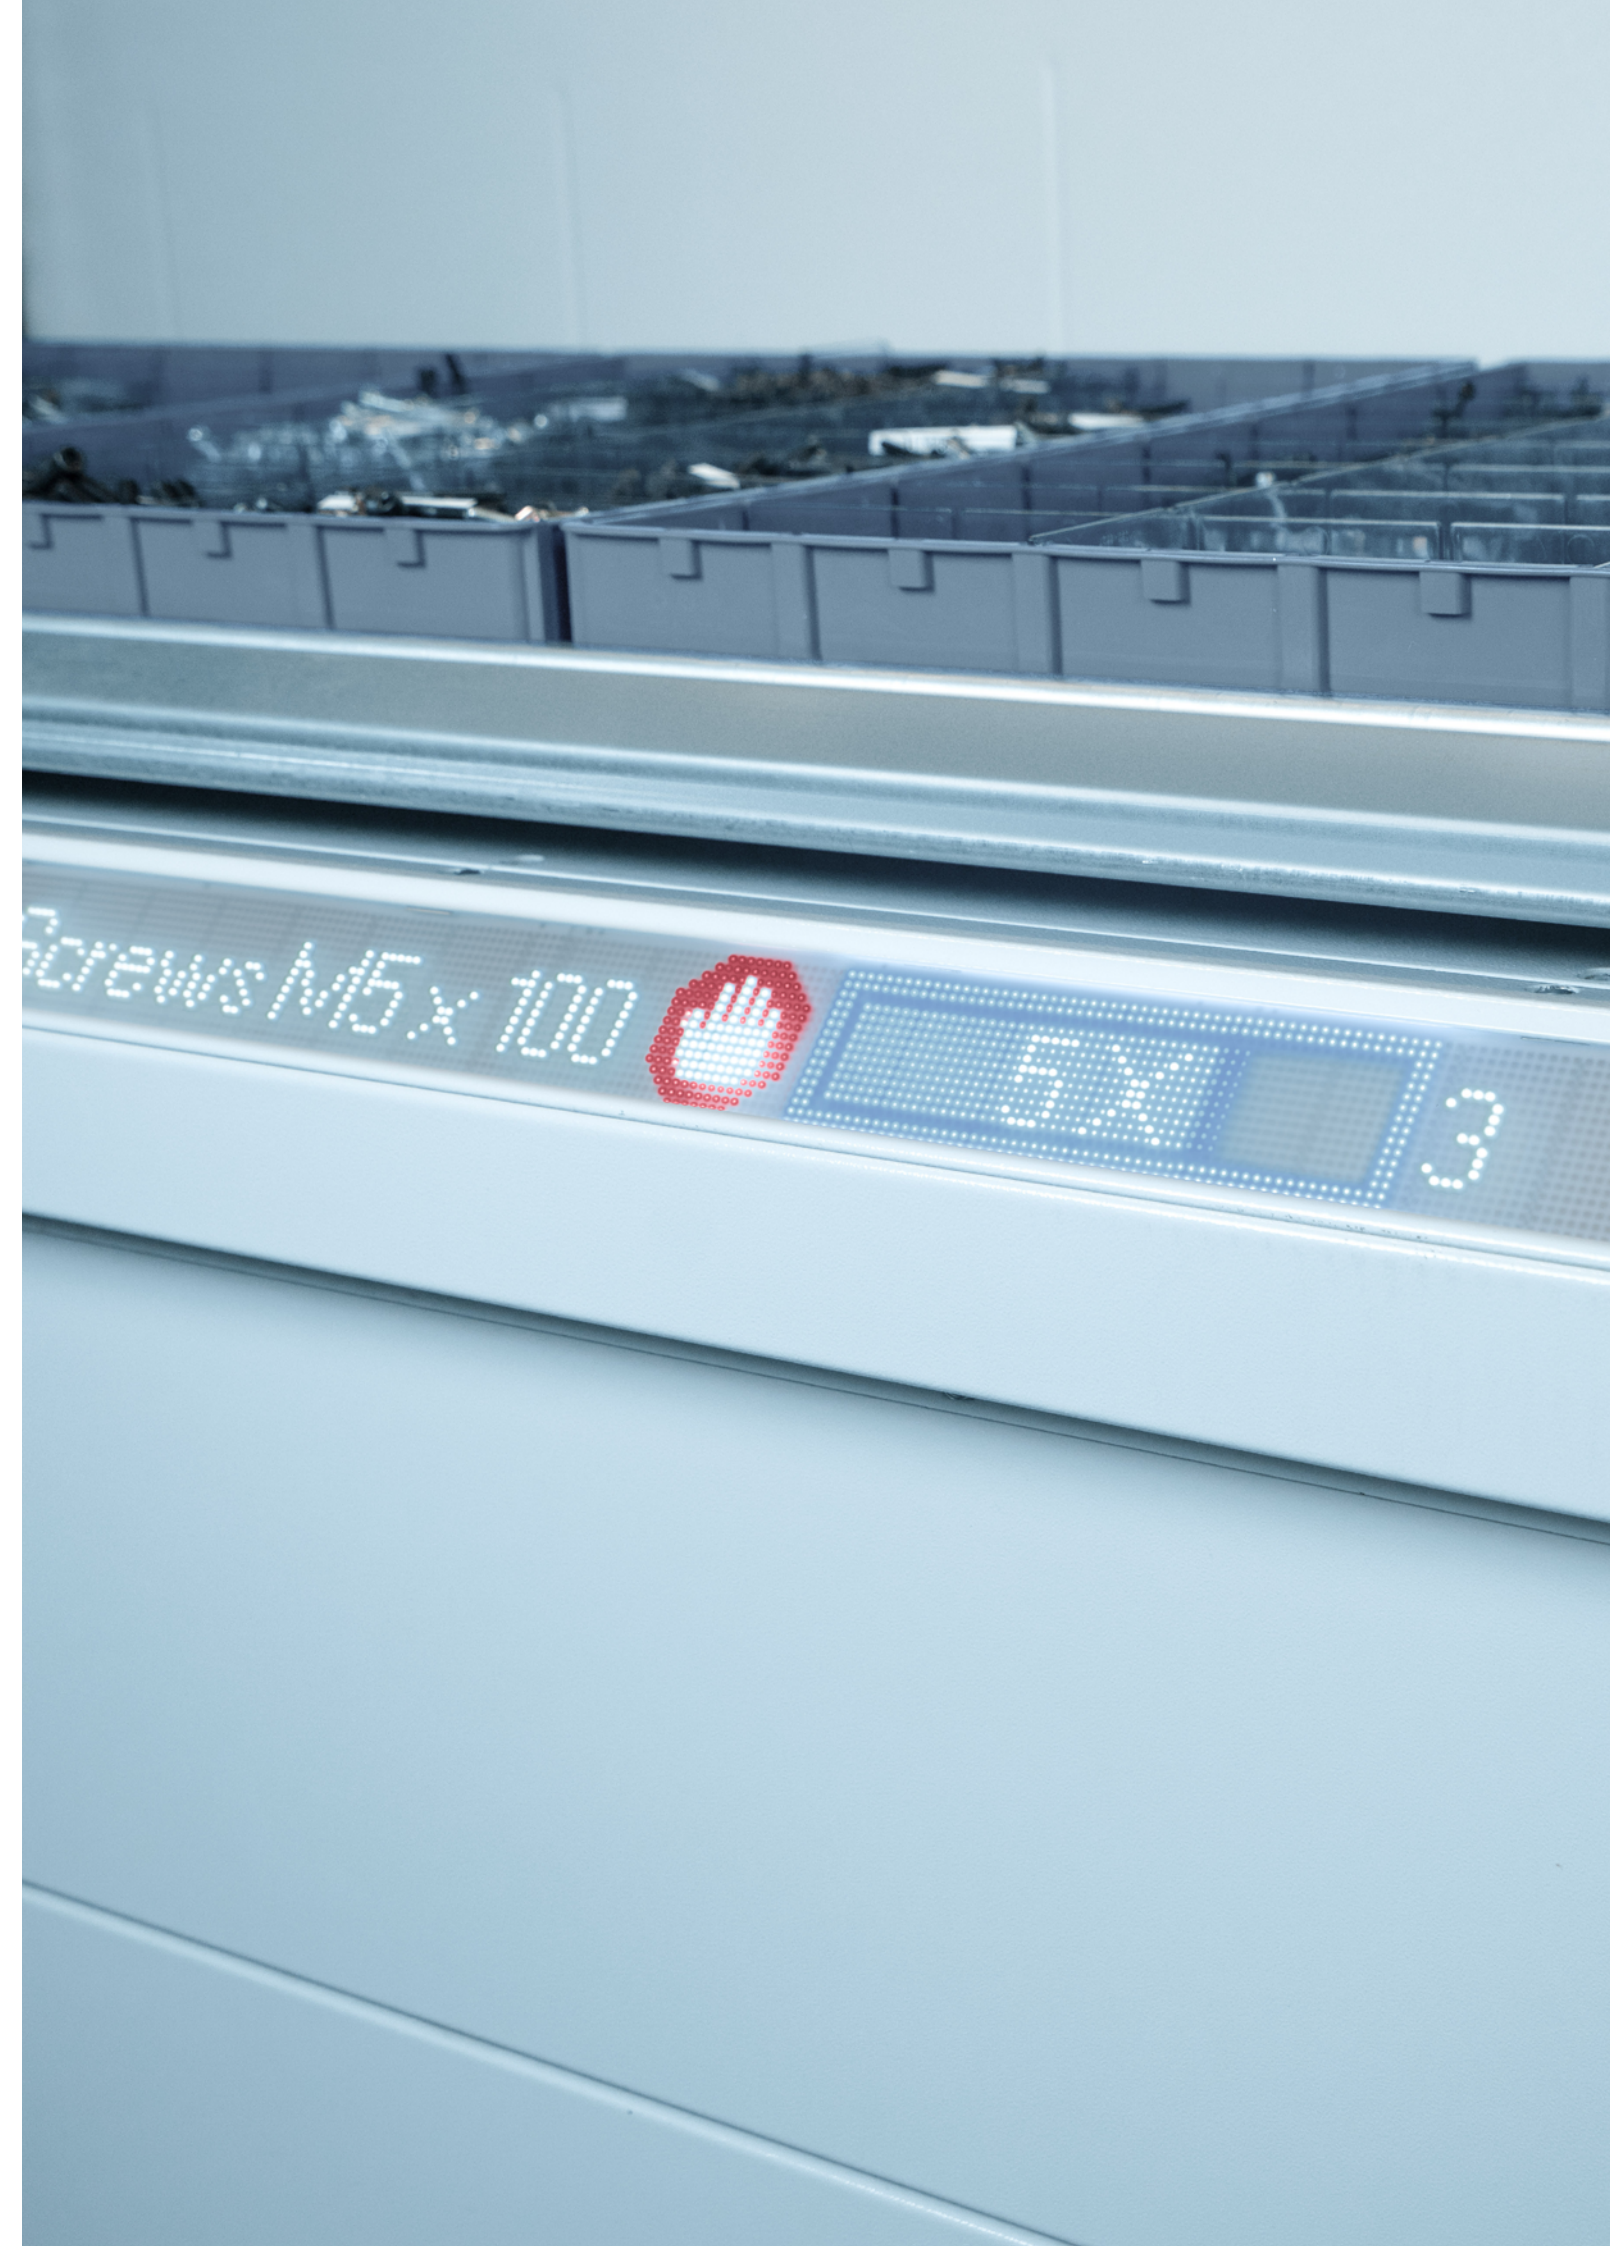

A qualified Kardex Remstar technician can have the LED-Navigator up and running in four hours.

Kardex Remstar offers a complete retrofit solution. This latest order picking display-assistant complements your existing Kardex Remstar technologies and takes your warehouse picking performance to the next level.

times

Order picking display-assistant

The Display LED-Navigator uses colored lights to communicate the material and order information to the operator. Information displayed by the LED-Navigator can include: SKU number, descriptions, measurements, storage location, order quantity, etc.

Efficient picking & reliability

Displaying accurate and timely information, the LED-Navigator ensures a smooth and efficient picking process.

Retrofit machines

Within less than four hours this new innovative picking experience can be installed by a qualified Kardex technician.

Precise picking time

Featuring a status bar and countdown, the Display LED-Navigator indicates when it is time for the operator to pick.

Language customization

The high resolution panel supports multiple languages including English, Spanish, French, Chinese, and many others.
