

Positioning Your Order Picking Team For Success

Automated storage and retrieval systems (ASRS) deliver ergonomic benefits that yield higher productivity, better accuracy and reduced operational costs.

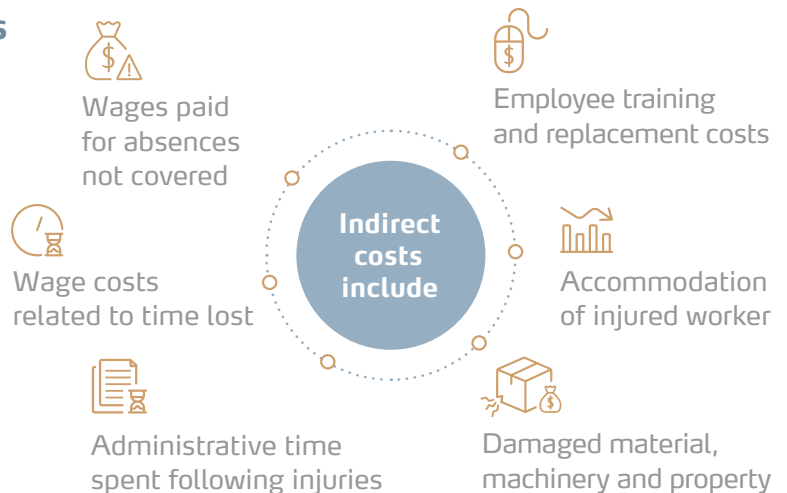

The cost of common ergonomic injuries

Disabling workplace injuries cost U.S. businesses nearly **\$59 billion** per year according to the 2020 Liberty Mutual Workplace Safety Index

Including indirect injury costs

The average cost per medically consulted injury is: **\$50,000** per employee.

The ergonomic impact of ASRS

- 
✓
Increase productivity & improve accuracy
 ASRS boosts picking rates by reducing walk and search time and improves picking accuracy due to reduced operator fatigue.
- 
✓
Golden zone delivery
 Every item is delivered to the optimal ergonomic work height, (Golden Zone) to reduce the risk of injury due to reaching, bending and stooping.
- 
✓
Easily manage heavy loads
 ASRS units can be integrated with an overhead crane and electric hoist for ergonomic handling assistance reducing the risk of injury.
- 
✓
Productive happy workers
 ASRS reduces absenteeism, insurance premiums and worker's compensation claims and improves worker morale.
