Relocation

Take the risk out of relocating

Is it time to move your warehouse equipment to another country, a new warehouse or simply to the other side of the wall? Do you need to change your process flow and structure or consolidate work zones? The Kardex Life Cycle Service team will safely and smoothly relocate or modify your warehouse while fully optimizing existing systems and processes.

The safest solution for warehouse equipment

When selecting a relocation team, choosing a highly qualified partner is critical to avoid unnecessary complications, downtime and financial losses. Unfortunately, Kardex has witnessed one too many instances where non-Kardex approved agents have moved Kardex equipment. The result: incorrect machine reassembly and expensive repair costs.

To avoid this situation and ensure the safest move possible, Kardex offers a 6-month manufacturer warranty when using a Kardex-approved agent. If a Kardex machine is moved while under a maintenance contract, the contract is frozen during the move and restarted whenever and wherever the machine is back in action.

Kardex Relocation Program

When moving within an existing building, Kardex will:

- Complete a full operational inspection prior to moving the machine
- Make recommendations for repairs (if required)
- Offer a six-month full warranty of the machine functionality if less than 10 years old

When moving within an existing country, Kardex will:

- Survey both sites and provide a complimentary report
- Disassemble and reassemble using only highly experienced factory-certified technicians
- Pack and transport (if required)

When moving to a new country, Kardex will:

- Appoint a local project manager in both countries
- Manage and consult during the entire process
- Utilize its global network of factory-certified, local teams

Why relocate with Kardex?

Kardex provides a one-stop shop. Factory-certified technicians take care of everything from dismantling and packaging to transporting and reassembling. When necessary, Kardex can also manage equipment refurbishments and modifications.

Cost-effective

Avoid high repair costs as a result of inexperienced workers and poor assembly

Efficient

Increase productivity by sticking to a strategic relocation plan and minimizing downtime

Safe

Benefit from disassembly and reassembly by certified technicians

Optimized

Receive a free warehouse performance consultation and a complimentary machine audit
