CDK Global
Auto Interface

The Kardex Power Pick System maintains a CDK Global certified interface to support automotive dealerships using Kardex Remstar automated storage and retrieval systems (ASRS). Supported by both Kardex Remstar and CDK Global, the interface provides a fast, reliable, and secure connection to the CDK Global server.

Experience the power of the Kardex Power Pick System with CDK Global

- Sales and repair orders are electronically downloaded to the Kardex Power Pick System and parts are delivered automatically to the operator

- Parts added, deleted, or superseded on your CDK Global system will automatically be synchronized to the Kardex Power Pick System

- Any inventory discrepancies will automatically be reported through the DMS reconciliation module

- For physical inventory the Kardex Power Pick System can download information from CDK Global (printing count sheets or prompting the operator for location counts) and electronically upload accurate stock levels back to CDK Global

- Picking can be interrupted for hot picks to meet ever changing delivery and customer demands

- Internet connectivity for HTML-based help files, problem reports, feedback forms, support requests, software updates, downloads, etc.

- Functions can be scheduled to run every night or on-demand as system requirements dictate

Efficient parts operations

Integrating your existing CDK Global with the Kardex Power Pick System gives you more control and visibility over your parts operations – allowing you to assist customers faster and more efficiently.

Increased customer satisfaction

Delivering parts to the operator eliminates part searching time and increases customer face-time.

Reduced floor space

ASRS utilizes wasted overhead and aisle space to maximize space, recovering up to 85% floor space.

99.9% increased accuracy

Using pick-to-light technology with goods to person delivery increases accuracy rates significantly.

Reduced inventory on hand

Real time inventory status and reporting allows managers to control operations more efficiently.
