Midlife Update

Midlife update

The unit is fully updated and upgraded mechanically and equipped with the latest electronic parts.

This service includes the following packages:

Mechanical parts

Ensure the availability for long life, regular service, and timely replacement of wear parts, as well as the renewal of obsolete components is very important. Moreover, environmental influences such as temperature, dust, dirt, or aggressive conditions, might require an earlier replacement.

Electronic parts

With the control platform upgrade to a small warehouse management system there is the possibility to even increase the efficiency of the installation. With the Logicontrol the classic Pen & Paper mode will get replaced, typically used to enable the user to store and record entered materials.

Continue to maximize the productivity with a midlife update

Your benefits at a glance

Sustain
reliability

Along with lasting longer the equipment also runs more efficiently.

Maximize
product
lifespan

Keeping your equipment in good condition allows it to run longer, lowering costs.

Predictive
costs

Fixed CAPEX instead of unpredictable OPEX.

Defined
package solution

Our packages allows us to create the best condition based solution.

Let us make this journey together and challenge the status quo.
