

Lighthouse Spectra Native File Manager

Reduce review data costs by up to 70% by loading only the native files you need

With Native File Manager on the Spectra platform, you can search an entire data set post-deduplication without incurring the costs of hosting native files — upload only the native files you need, when you need them.

HOW IT WORKS

A hosted gigabyte usually includes native files, text, and metadata. With Native File Manager, only a fraction of that data is required to effectively search an entire set. Native File Manager leverages document tagging in your Relativity workspace to make it possible to search data in full fidelity, fast and upload the native files you need on demand.

Once you've finished searching, simply batch-tag eligible documents in your review set for upload using Native File Manager. You can even tag documents for native upload as you navigate from document to document. Before uploading, you'll be provided with an estimate of the total native upload size. The tool intelligently excludes native files that have already been uploaded.

THE BENEFITS OF NATIVE FILE MANAGER

Competitors can't match the data value. Consider the processing and hosting of a standard data set. In processing, a 100GB data set will typically expand to around 125GB and reduce to around 80GB of hosted data. This reflects a reduction in volume of about 35% with upstream filtering. With Native File Manager, this same data set results in just 37.5GB of hosted data — a 70% reduction in data volume.

Search more for less. The scope of documents you search is usually proportional to hosting costs, with more docs resulting in higher hosting costs. With Spectra and Native File Manager, you can include 70%+ more documents in each fully searchable hosted gigabyte.

70%+
MORE DOCUMENTS

Simplify your search process. Unlike a traditional workflow where filtering is conducted upstream and re-executed when changes are made, Native File Manager lets you search all your data, then selectively load only the native files you need. You can dramatically reduce the effort and time spent in search term iteration by eliminating the need to step back in your workflow as search terms evolve.

Interested in exploring how Native File Manager on Spectra can help you get more out of each searchable gigabyte? Let our expert Spectra team demonstrate what's possible.
