

# Spectra Gives Companies a Right-Sized Solution for In-House Compliance Monitoring

Waiting to find out whether you're out of compliance based on the results of an audit is risky and potentially expensive, particularly in regulated industries where the stakes are higher. This wait-and-see approach leaves organizations with the need for an effective, scalable way to continually monitor compliance.

Using Spectra, our clients can attain efficient and scalable compliance monitoring, skip processing fees by uploading their own data, get to the most unique content quickly, and layer in analytics to achieve the most effective workflow.

## How it works

We help our clients discover the most relevant content through a combination of search terms, date filtering, and email thread suppression, as well as the use of our proprietary component-level deduplication technology, ReviewSmart. We then implement a customized, portable Brainspace model across the set that is continually updated, making the review more efficient month-over-month.

The result is a compliance monitoring program that optimizes human review hours. Given the high-volume, low-risk nature of the work involved, discovering numerous technical efficiencies is key to curbing costs. Ultimately, our clients find great benefit from these types of programs because they provide, not only the ability to identify issues early, but also the ability to demonstrate a proactive, compliance-monitoring approach, if necessary.

## SPECTRA OFFERS MULTIPLE BENEFITS THAT MAKE IT IDEAL FOR IN-HOUSE COMPLIANCE MONITORING, INCLUDING:

- Spectra is self-serve, making it easy to fit in non-critical path tasks. Spectra's automation features reduce the manual tasks required for setup, such as data import and processing, therefore reducing administration time. This makes Spectra ideal for ongoing, low-risk environments.
- Email thread suppression and component-level deduplication features significantly reduce the size of review sets and the costs of data hosting.
- When native files are unnecessary for compliance certification, Spectra's Native File Manager technology will significantly reduce the hosted size, and therefore cost, without affecting the workflow.
