Software, Tools, and Third-Party Applications That Make the Industry-Best Review Platform Even Better

Your team's work in document review relies fundamentally on Relativity, and for good reason. Relativity is the leading review platform in the legal industry, with litigation and eDiscovery specialists relying on its speed, intuitive data representations, and unparalleled scale, year after year.

Lighthouse understands your longstanding commitment to using Relativity, and how tightly aligned your people and processes are to the platform. As a Relativity Certified Partner of more than 10 years and one of the first Certified Partners to offer Relativity as our primary review platform, Lighthouse is similarly committed to making Relativity review the best possible experience for our client users. We've even been recognized twice as Relativity Innovation Award finalists for the technologies and services our engineering teams have developed to leverage Relativity in new ways.

Review Reimagined, Delivered to Relativity

Lighthouse's approach to review combines revolutionary search and document reduction led by a team of experts, with the dependability and familiarity of results delivered right to Relativity. These augmented-review services get you to your results—and your case strategy—faster and with the most accurate document set.

AI-powered classifiers use a natural language processing (NLP) engine and deep learning data models for higher-precision classification of privilege, PII/PHI, source code, and more.

Hot document identification blends advanced analytics with search insights by trained linguists to surface key documents at the start of a case, so legal teams can make better informed decisions.

Our partnership is reinforced by the Relativity-certified expertise throughout our review, experience, and service delivery groups:

250
Total Relativity Certifications

Including:

72
Relativity Certified Administrators

58
Relativity Review Management Specialists

19
Relativity Analytics Specialists

19
Relativity Experts or Masters

LIGHTHOUSE

Search term optimization and **keyword consulting** by our team of experts provides guidance on search terms and strategy, for more precise document reduction going into review.

Advanced deduplication and junk identification that looks beyond text, within and across multiple matters.

Refined structured analytics to streamline review by identifying email thread relationships and grouping similar documents more comprehensively than Relativity alone.

Automated privilege logging uses AI to identify potentially privileged actors and content, reducing data sets and streamlining second-pass review.

Self-Service Innovtion, End to End

Stay in control of your eDiscovery projects from intake to production with software and add-ons that boost your review experience in Relativity. Our technology is backed and supported by the most knowledgeable practice and technical professionals in the industry, so if you need help, it's a call away.

LIGHTHOUSE Spectra

Spectra unites the best tools in eDiscovery into a single orchestration solution, so you can create matters and assign and manage users in Relativity directly from the Spectra interface, then ingest and process data via Nuix into Relativity. Plus, our native file manager tool allows you to search text and metadata without the costly burden of hosting native files.

Relativity®

Relativity Analytics is the single-platform way to analyze data structurally and conceptually, enabling you to organize large, unfamiliar document sets and minimize the time your team spends coding irrelevant documents.

Brainspace

Brainspace Visual Analytics enables you to perform analysis of your datasets to identify high-value data and focus on relevant content. It includes multiple data visualizations that help navigate data and uncover themes and links in communication within a dataset.

LIGHTHOUSE

Our **chat transcripts viewer** displays the results of Lighthouse's proprietary chat pre-processing technology directly in Relativity, which performs message-level deduplication and reconstructs link relationships for more logical and intuitive review of culled chat datasets.

LIGHTHOUSE

Power of the Relativity Ecosystem

The volume, velocity, and variety of data remain universal challenges in the enterprise—but unique problems still abound. As a Relativity by Lighthouse user, you have access to a selection of Relativity apps and plug-ins that address specialized needs, from translation, to redaction, to task and user management.

- **Relativity Transcripts** gives you the ability to upload, review, code, and annotate transcript files in Relativity.

- **Exolution** enables the display, search, and mass redaction of PII, PHI, and other sensitive information across a large collection of native files.

- **Blackout** automatically redacts native PDF, image jobs, and native Excel files.

- **Delegate** is an orchestration app for automating repetitive tasks, managing complex permissions, and creating access settings for Relativity workspaces and matters.

- The **AI Translate Plugin** supports the ordering and order management of document translation including translation service levels.

- The **Language Weaver Connector**, available only in our UK environment, allows you to translate foreign language ESI without having to move files in and out of your review platform.

- **Veritone aiWARE** helps you transcribe, translate, redact, detect objects for privilege, and search audio and video files.
