② (Nominal Rating)

Heavy-Duty Jacketed Bracket Pumps For Viscous Liquid Handling Problems

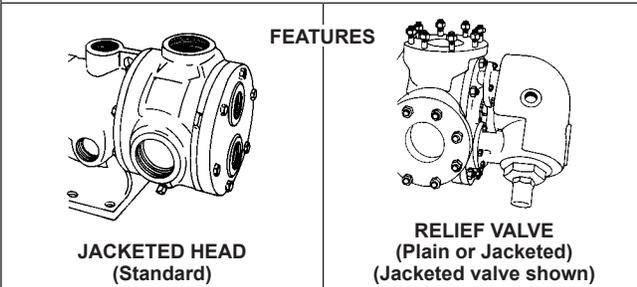

The jacketed bracket Series 225 and 4225 pumps use heavy-duty construction to tackle tough industrial jobs. The Viking positive displacement jacketed rotary pump provides an even flow when handling heavy, viscous liquids like asphalt, syrup, molasses, coal tar, soap solutions, etc. These liquids present temperature control problems, so jacketed areas at the front and back of the pumps allow preheating of the pump. Preheating is required with viscous liquids which cool down to ambient temperatures and become almost solid. Without preheating, this heavy mass can damage pumps, motors and total systems.

These pumps are available with either soft packing (Series 225) or with mechanical seals (Series 4225).

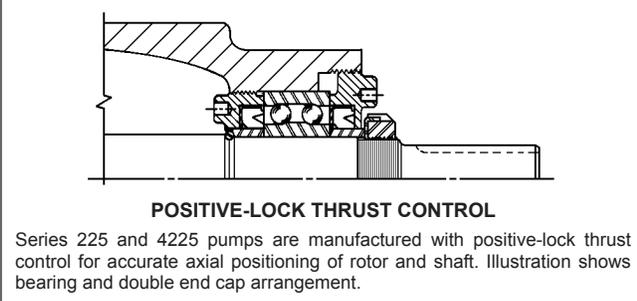

① Values shown represent minimums or maximums. Some special construction or consideration may be required before a cataloged pump can be applied to an application involving maximum pressure or minimum or maximum temperature and/or viscosity.

② Nominal capacities based on handling thin liquids at low pressures.

Metric conversions are based on US measurements and rounded to the nearest whole number.

Jacketed head is standard with Jacketed Bracket Series 225 and 4225. For over pressure protection when using a jacketed head, a jacketed relief valve should be piped into the discharge line. Jacketed relief valves on head are available for pumps of 135 to 420 GPM (31 to 95 m³/hr); non-jacketed valves available for all sizes. (Note: combination of jacketed head and relief valve on head not available.)

Note: Maximum recommended temperature for cataloged pump is 450°F. For higher temperatures consult factory.

- ① PTFE fitted mechanical seal used in Series 4225 pumps.
- ② "Q" size has steel idler when steel fitted construction is required.
- ③ For mechanical seal pumps on applications with viscosities greater than 25,000 SSU (5,500 cSt) anytime during operating cycle, check with factory.
- ④ Ports are suitable for use with 125# ANSI cast iron or 150# ANSI steel companion flanges or flanged fittings. All others tapped for standard pipe.
- ⑤ "KK" and "LS" sizes have Ductile Iron rotor.
- ⑥ For maximum recommended discharge pressures when handling other viscosities and/or at other speeds, see performance curves. If suction pressure exceeds 50 PSIG (3 BAR), consult factory.
- ⑦ "H" and "HL" sizes have powdered metal idler.

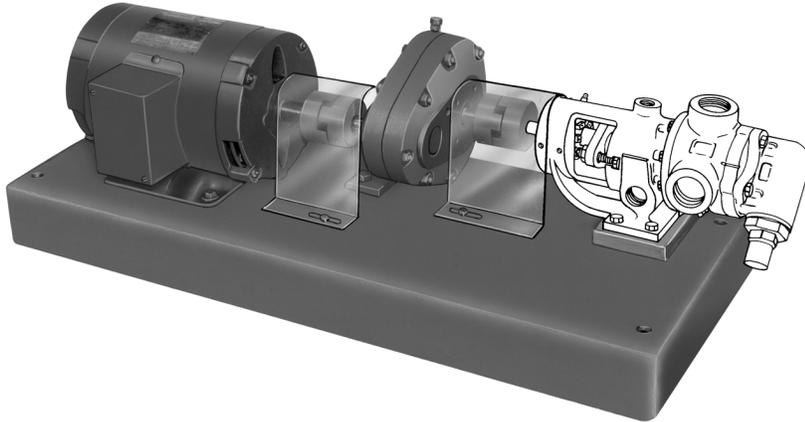

Metric conversions are based on US measurements and rounded to the nearest whole number.

VIKING® HEAVY DUTY PUMPS

Issue	D

VIKING HELICAL GEAR REDUCTION UNITS (“R” DRIVE)

SERIES 225 and 4225 Pumps
with “R” Drive “A” Reducer
Shown with non-jacketed relief valve

SERIES 225 and 4225 Pumps
with “R” Drive “B” Reducer
Shown with jacketed head plate

SERIES 225 and 4225 Pumps
with “R” Drive “C” Reducer
Shown with non-jacketed relief valve

Viking’s jacketed bracket pump Series 225 and 4225 are available with helical gear reducers that have been specifically developed for efficient operation with Viking heavy-duty pumps. These rugged, compact, exceptionally quiet gear reducers come in three sizes: the “small” A size, “medium” B size and “large” C size.

The “A” size reducer, available with four gear ratios (2.24, 2.76, 3.43, and 4.17 to 1), is ideally suited for use with the “H” and “HL” size pumps. This reducer is bracket mounted and requires couplings on both the input and output shafts. With the “A” size reducer and 1200 or 1800 RPM motors, the “H” and “HL” size pumps can be used to cover a capacity range from 2 to 12 GPM.

The medium size “B” helical gear reducer is available with eight gear ratios from 1.87:1 to 7.65:1. This size normally is used with pump sizes “K” through “LS”. Like

the “A” reducer, the “B” reducer is bracket mounted and requires couplings on both the input and the output shafts. With the “B” reducer, “K” through “LS” pumps driven by 1200 or 1800 RPM motors can be used to cover a capacity range from 12 to 210 GPM.

The large “C” size reducer also is available with seven gear ratios from 2.21:1 to 7.95:1. It is normally used with the “L” through “M” size pumps. Like the “A” and “B” reducers, the “C” reducer is bracket mounted and requires flexible couplings both for the input and output shafts. With the “C” reducer, “L” through “M” size pumps, driven by 1200 or 1800 RPM motors, can cover a capacity range from 30 to 420 GPM.

Dimensions for “R” Drive Units— See Pages 142.10 and 142.11.

① PTFE fitted mechanical seal used in Series 4225 pumps.

② For mechanical seal pumps on applications with viscosities greater than 25,000 SSU (5,500 cSt) anytime during operating cycle, check with factory.

③ For maximum recommended discharge pressures when handling other vis

cosities and/or at other speeds, see performance curves. If suction pressure exceeds 50 PSIG (3 BAR), consult factory.

④ Ports are suitable for use with 125# ANSI cast iron or 150# ANSI steel companion flanges or flanged fittings. All others tapped for standard pipe.

Metric conversions are based on US measurements and rounded to the nearest whole number.

OUTSTANDING FEATURES

- Mounts NEMA standard motors, 1200 or 1800 RPM. (5 HP, 1800 RPM maximum with “A” reducer; 15 HP, 1800 RPM maximum with “B” reducer, and 40 HP, 1800 RPM maximum with “C” reducer.)
- Complete reducers within a size may be interchanged on a Viking pump unit to obtain desired pump speeds and capacities. Thus the four gear ratios within the “A” size reducer may be interchanged within the size by selecting the proper pinion and gear of a common ratio. Similarly, all eight “B” reducers are interchangeable on each respective series of “B” reducer units. All seven “C” reducers are interchangeable on each respective series of “C” reducer units.
- Quiet operation. High hardness helical gears run in a bath of oil.
- Compact. Narrow and low to fit in small space and low overhead.
- Pump, motor or reducer can be removed without disturbing the other two components.
- Units with “A”, “B” and “C” reducers have standard flexible coupling with guard between power and reducer as well as between reducer and pump.
- Oil and weather tight for outdoor service.
- Ball bearings throughout.
- Reducers easily adjustable to different motor center heights.
- Self-supported. Not hung on pump or motor shafts. No radial load on pump or motor shafts.
- “A” reducers have ¾” dia., ⅜” key input and output shafts; “B” reducers have 1” dia., ¼” key input shaft and 1⅛” dia., ¼” key output shaft; “C” reducers have 1⅜” dia., ⅜” key input and output shafts.

VIKING® HEAVY DUTY PUMPS

SERIES 225 AND 4225

GEAR REDUCER UNITS (“P” DRIVE)

SERIES 225 and 4225 Pumps
with “P” Drive
“K” through “L” Sizes
Shown with jacketed head plate

SERIES 225 and 4225 Pumps
with “P” Drive
“LQ” through “M” Sizes
Shown with jacketed head plate

Viking’s Heavy-Duty Series 225 and 4225 packed and mechanical seal pumps in sizes from “K” through “M” (60 to 420 GPM) are available in the “P” drive arrangement.

These Heavy-Duty units are mounted on formed steel bases (“K” through “LS” sizes) and structural or formed steel bases (“Q” and “M” sizes) as illustrated above.

All mount separate heavy-duty reducers with flexible

couplings between pump, reducer and motor. Coupling guards as illustrated are standard construction. See below for specifications and motor horsepower range.

Dimensions for “P” Drive Units — Consult Factory.

Issue	D

DIRECT DRIVE UNITS (“D” DRIVE)

SERIES 225 and 4225 Pumps
with “D” Drive
“K” through “M” Sizes
“K” size shown with non-jacketed head

SERIES 225 and 4225 Pumps
with “D” Drive
“H” and “HL” Sizes
Shown with non-jacketed head

The Direct Drive “D” mounting is specifically designed for compactness and quietness of operation. In this type assembly the pump is mounted on one end of a rectangular formed steel base and connected to a gearhead motor by means of a flexible coupling with guard. “H” and “HL” sizes can be directly connected to 1800 RPM motors, as well as gearhead motors.

Dimensions for “D” Drive Units—See Pages 142.11 and 142.12.

VIKING® HEAVY DUTY PUMPS

SERIES 225 AND 4225

V-BELT DRIVE UNITS (“V” DRIVE)

SERIES 225 and 4225 Pumps
with “V” Drive
“H” through “M” Size Pumps
Shown with jacketed head plate

Viking's V-belt driven line of Heavy-Duty Series 225 and 4225 pumps are all mounted on formed welded steel bases. Pumps mount on pads to accept totally enclosed V-belt drive. All units in this series feature standard pump shaft extension with totally guarded V-driven pulley mounted on end of heavy-duty pump shaft.

Pumps furnished with jacketed head as standard.

Dimensions for “V” Drive Units—See Page 142.12.

DIMENSIONS— SERIES 225 AND 4225 ("R" DRIVE) "K" THROUGH "LS" SIZE PUMPS "B" SIZE REDUCER UNITS

- ① Ports are suitable for use with 125# ANSI cast iron or 150# ANSI steel companion flanges or flanged fittings. All others tapped for standard pipe.
 ① With motor frames 184-T and smaller, these units are assembled on a shorter base with the following dimension changes: (F = 16", G = 39", L = 3", N = 5½"). Motor rails 1½" high are required with 56, 143-T and 145-T frame motors.
 NOTE: Motor frame larger than 256-T requires larger base. Consult factory. Units available to accept 10 HP, 1200 RPM maximum motor.
 NOTE: Motor rails 2" high are required on "L" through "LS" size units with 184-T or 4½" center height motors.
