SERIES DESCRIPTION

127C Series™, 4127C Series™, 1127C Series™

The Universal Product Line has the broadest range of sealing options of all pumps built by Viking Pump. The U-Plus™ bracket design accepts numerous component seals for use in the stuffing box or behind the rotor, packing, cartridge seals and Viking Pump's own O-Pro® seals.

This is Viking Pump's most versatile line of internal gear pumps with many design and material options. These series are available with the ProPort™ casing and a wide variety of flange types and sizes as well as both 90 degree and opposite port arrangements* enabling flexibility when connecting pumps to piping.

327A Series™, 4327A Series™, 1327A Series™:

Viking's largest size product series in the Universal Product Line offer high capacity and a variety of sealing arrangements including component or cartridge mechanical seals, packing and O-Pro® seals. These products come standard with a jacketed bracket and optional jacketed head.

UNIVERSAL PRODUCT LINE: STAINLESS STEEL — NON-JACKETED PUMPS

127C Series™, 1127C Series™, 4127C Series™, 327A Series™, 1327A Series™, 4327A Series™

FEATURES & BENEFITS

- Positive Displacement Internal Gear pumping principle handles a broad range of viscosities with constant flow rate
- **ProPort™ Casing (127C Series™, 1127C Series™ & 4127C Series™):**
 - » Adaptable port design offers a variety of ports sizes and types, enabling flexibility when connecting pumps to piping
 - » H-Q sizes available with optional opposite porting
 - » Casing drain allows the pump to be drained without removing the head
 - » Optional O-ring joint seals for high pressure or difficult to seal applications
 - » Internal circulation promotes flow behind the rotor
- **U-Plus™ Bracket (127C Series™, 1127C Series™ & 4127C Series™):**
 - » Seal options include packing, O-Pro® Guard Seal, single component seals, cartridge lip seals and cartridge single and double mechanical seals
 - » Stainless steel window guards offer protection from rotating parts
- Footed one-piece stainless steel bracket provides rigid mounting to help maintain alignment, which extends seal and bearing life stainless steel construction for reliable handling of corrosive liquids
- Series designed with an enlarged bearing housing; used in conjunction with a spacer coupling permits easy cartridge seal or O-Pro® Guard seal installation and removal in place without removing the head and rotor/shaft
- Axial rotor thrust is controlled by double row ball bearing or tapered roller bearings; bushings provide a secondary point of radial shaft support
- Rotatable bearing housing provides easy rotor end clearance adjustment to compensate for viscosity or wear
- Numerous material options are available for bushings, idler pins, shafts, rotors, idlers and elastomers
- Can use direct drive, gear reducer or gearmotor drive, or belt-drive
- Pressure relief valve standard on non-jacketed pumps; less valve / plain head option available

PORT LOCATION OPTIONS

90° port options:

Opposite port options:

STANDARD MATERIALS OF CONSTRUCTION

Component	Standard Material
Casing	Stainless Steel, ASTM A743, Class CF8M
Ports	Stainless Steel, ASTM A743, Class CF8M
Head	Stainless Steel, ASTM A743, Class CF8M, Case Hardened
Bracket	Stainless Steel, ASTM A743, Class CF8M
Idler	Stainless Steel, ASTM A743, Class CF8M, Case Hardened
Rotor	Stainless Steel, ASTM A743, Class CF8M, Case Hardened
Shaft	① Stainless Steel, ASTM A276, Type XM-19 or 316 Condition B
Idler Pin	Hard Coated Stainless Steel, ASTM A276, Type 316, Colmonoy #6 Coated
Idler Bushing	Carbon Graphite
Bracket Bushing	Carbon Graphite
Pressure Relief Valve	Stainless Steel, ASTM A743, Grade CF8M
Standard Packing (127C Series™, 327A Series™)	Braided PTFE
O-Pro® Guard Gland & Sleeve (1127C Series™, 1327A Series™)	Stainless Steel, ASTM A743, Class CF8M, Sanitary FKM Elastomers
Standard Mechanical Seal (4127C Series™, 4327A Series™)	Carbon vs. Silicon Carbide Faces, PTFE Elastomers

① N, R and RS shafts are Colmonoy #6 coated.

SPECIAL MATERIALS & OPTIONS SELECTION GUIDELINES

For High Viscosities – Above 2,500 SSU (550 cSt)

- Extra clearances, depending on viscosity. See ES-2 for recommendations.
- Special Sealing:
 - PTFE Type 9 seals good up to 25,000 SSU (5,500 cSt).
 - Packed gland good up to 2,000,000 SSU (440,000 cSt).
 - O-Pro® seals available to 2,000,000 SSU (440,000 cSt).
- Larger ports may be required depending on suction conditions.
- Pump should be operated at slower than normal speeds, which may require a larger pump.
- Internal circulation holes in the ProPort™ casing can be used to promote flow behind the rotor.
- For viscosities over 250,000 SSU (55,000 cSt), contact factory for additional pump construction and operation recommendations.

For Low Viscosities or Non-Lubricating Liquids – Below 100 SSU (20 cSt)

- 770 stainless steel or PPS idler to prevent galling.
- Pump should be operated at slower than normal speeds, which may require a larger pump.

For High Temperatures – Above 225°F (105°C)

- High temperature elastomers – PTFE up to 450°F (230°C); FKM up to 350°F (175°C)
- High temperature bushings recommended depending on temperature, size and specific material. See ESB-3 for recommendations.
- Additional operating clearances may be required depending on temperature, size and specific material. See ES-2 for recommendations.
- For temperatures above 450°F (230°C), special materials and sealing requirements may be needed. Contact factory for recommendations.
- Pump should be operated at slower than normal speeds, which may require a larger pump.

For Abrasive or Dirty Liquids

- If possible, filter or strain out the abrasives present.
- Wear resistant bushings - silicon carbide, tungsten carbide or Colmonoy coated.
- Abrasive-resistant idler pin - tungsten carbide or Colmonoy plus TC filler coated pins.
- Hard-coated shaft.
- Abrasive-resistant behind the rotor seals.
- For high concentrations of abrasives or particle sizes greater than 250 microns (0.010 in), contact factory for recommendations.
- Pump should be operated at slower than normal speeds, which may require a larger pump.
- Consult factory for specific recommendations.

① For maximum recommended discharge pressures at different viscosities, see performance curves, which can be electronically generated with the Viking Pump Curve Generator, located on www.vikingpump.com. If suction pressure exceeds 50 PSIG, consult factory. Higher pressures possible with factory approval based on application details.

② Extra clearances are required above 225°F / 105°C. Higher temperatures can be handled with special construction, consult factory.

③ Ports are suitable for Class 150 ANSI stainless steel companion flanges or flanged fittings.

④ Maximum hydrostatic pressure for standard pump construction. Rating is dependent on seal, gaskets and ports.

① Ports are suitable for use with Class 150 ANSI stainless steel companion flanges or flanged fittings. Ports are tapped for installation of studs.

NOTE: The N size is standard with a jacketed bracket and non-jacketed head and non-jacketed relief valve, while the "R" size is standard with a jacketed bracket, a jacketed head, and a non-jacketed relief valve.

UNIVERSAL PRODUCT LINE: STAINLESS STEEL — NON-JACKETED PUMPS

127C Series™, 1127C Series™, 4127C Series™, 327A Series™, 1327A Series™, 4327A Series™

DIMENSIONS – RS SIZE – JACKETED BRACKET (327A SERIES™, 1327A SERIES™, 4327A SERIES™)

NOTE: RS size pumps are only available with a jacketed casing, as shown. RS pumps standard with raised face flanged ports.

NPSH REQUIRED

Printed performance curves are not available.

Performance curves can be electronically generated with the Viking Pump Curve Generator on vikingpump.com.

NPSH (Net Positive Suction Head): The $NPSH_R$ (Net Positive Suction Head Required by the pump) is given in the table below and applies for viscosities through 750 SSU. $NPSH_A$ (Net Positive Suction Head – Available in the system) must be greater than the $NPSH_R$. For a complete explanation of NPSH, see Application Data Sheet AD-19.

FOR VISCOSITIES UP TO 750 SSU – See $NPSH_R$ table below.

$NPSH_R$ for high viscosities can be estimated using the following method:

1. Calculate line loss for a 1 foot long pipe of a diameter matching the pump inlet port size. Use your flow rate and max viscosity.
2. Convert this value into Feet of Liquid (S.G. 1.0)
3. Add this value to the $NPSH_R$ value in the chart below.

$NPSH_R$ – FEET OF LIQUID (Specific Gravity 1.0), Viscosities up to 750 SSU
