# SERIES DESCRIPTION

The 456 Motor Mounted units answer the need for more compact, lighter weight equipment. They use the 456 Series<sup>™</sup> hub type pumps with valves in casings and are mounted to modified NEMA "C" flange motors. Units are available with ¼, ¼, ½ or ¾ HP, 1 ph, 1200 RPM or 1800 RPM, special shaft, TEFC or explosion proof motors. All sizes use the mounting flange bracket with pump connected to motor through a coupling. The pump can be turned on the bracket to any position desired.

456 Series™

### **FEATURES & BENEFITS**

- Relief Valve Standard
  - » Permits bypassing of liquid from discharge back to suction side of pump. Prevents building up excessive pressure in discharge line. If reversing pump at any time, valve parts must be inserted in opposite port. Pumps with relief valve are built with right hand suction as standard.
- Mechanical Seal
  - » All models are furnished with mechanical seal. The seal is a rotary type packaged unit that is simple and self-adjusting.

# STANDARD MATERIALS OF CONSTRUCTION

Component	Standard Material
Casing	Cast Iron, ASTM A48, Class 35B
Head	Cast Iron, ASTM A48, Class 35B
Rotor & Shaft	Steel, ASTM A311, Grade 1144, Class B
ldler	Powdered metal, MPIF 35, FLC-4608-75HT
Idler Pin	Nitralloy, MIL-S-6709
Casing Bushing	Carbon Graphite
Mechanical Seal	Buna-N, FKM, Carbon vs. Ni-Resist

### NPSH REQUIRED

Printed performance curves are not available.

Performance curves can be electronically generated with the Viking Pump Curve Generator on vikingpump.com.

 $NPSH_{R}$  data is not available on the curve generator.

**NPSH (Net Positive Suction Head):** The NPSH<sub>R</sub> (Net Positive Suction Head Required by the pump) is given in the table below and applies for viscosities through 750 SSU. NPSH<sub>A</sub> (Net Positive Suction Head – Available in the system) must be greater than the NPSH<sub>R</sub>. For a complete explanation of NPSH, see Application Data Sheet AD-19.

FOR VISCOSITIES UP TO 750 SSU – See NPSH<sub>R</sub> table below.

#### NPSH<sub>R</sub> for high viscosities can be estimated using the following method:

- 1. Calculate line loss for a 1 foot long pipe of a diameter matching the pump inlet port size. Use your flow rate and max viscosity.
- 2. Convert this value into Feet of Liquid (S.G. 1.0)
- **3.** Add this value to the NPSH<sub>R</sub> value in the chart below.

NPSH<sub>R</sub> – FEET OF LIQUID (Specific Gravity 1.0), Viscosities up to 750 SSU

PUMP	PUMPS SPEED, RPM								
SIZE	640	780	950	1150	1450	1750
