Carbonite® Endpoint legal hold

Preparing for potential litigation with Carbonite Endpoint

Over time, nearly every company will find itself a party to legal proceedings. Once legal action is reasonably anticipated, companies have a duty to place a legal hold on all forms of relevant information including archived, current and future electronic documents to avoid evidence corruption. Carbonite Endpoint helps businesses comply with their document preservation obligations.

Once devices are placed on legal hold, all data backed up by these devices in the past, present and future remains in the Carbonite vault until the device is removed from legal hold. End users are not notified that their device is on legal hold and they are not able to delete any of their data from the Carbonite Endpoint vault. This gives organizations an easy and unobtrusive way to comply with legal hold requirements.

Key features:

- Data cannot be deleted while the device is on legal hold, but devices continue backing up to the Carbonite vault.

- An unlimited number of versions can be retained in the vault.

- Placing a device on legal hold takes seconds and is centrally managed via the administrator console.

- Administrators can perform batch restores to a target, such as a file server, local hard drive or network-attached storage. This saves time as data from multiple devices can be moved at once.

About Carbonite and Webroot

Carbonite and Webroot, OpenText companies, harness the cloud and artificial intelligence to provide comprehensive cyber resilience solutions for businesses, individuals, and managed service providers. Cyber resilience means being able to stay up and running, even in the face of cyberattacks and data loss. That's why we've combined forces to provide endpoint protection, network protection, security awareness training, and data backup and disaster recovery solutions, as well as threat intelligence services used by market leading technology providers worldwide. Leveraging the power of machine learning to protect millions of businesses and individuals, we secure the connected world. Carbonite and Webroot operate globally across North America, Europe, Australia, and Asia. Discover cyber resilience at carbonite.com and webroot.com.
