

Endpoint Backup

Endpoint protection for the evolving workforce

Endpoint Backup is a comprehensive, automatic backup solution for all your endpoint devices and the data that resides on them. Protecting data from human error, malware and theft becomes more complicated when protection is spread across wide geographic distances and complex network topologies. Endpoint Backup simplifies the administrative tasks associated with deploying protection across an entire organization, no matter the size, distribution or sophistication of the environment.

Endpoint data loss happens

Whether it is accidental or intentional, it happens

As the world's workforce changes how it works, it is critical for organizations to have enterprise-grade endpoint backup and protection no matter where employees go.

65% have seen a measurable increase in cyberattacks and attribute it to remote work¹

With Endpoint Backup, organizations can better protect valuable data on employee devices, mitigate data loss and data breaches and restore lost data quickly. It provides businesses with higher levels of cyber resilience through best-in-class endpoint protection to reduce risk that results from ransomware, user error and lost or stolen devices.

Protect your most vulnerable data

Endpoint data protection as part of your cyber resilience strategy

Endpoint Backup helps protect against data loss, data breaches and ransomware.

- Flexible deployment options – Back up to our cloud, the public cloud or on-site
- Global deduplication – Powerful, global deduplication of encrypted data
- Centrally-managed backup - Automated, IT-controlled backups can be managed on a single dashboard across the company
- Global location tracking – Locate and track lost or stolen endpoint devices
- Award-winning support – Available 24 hours a day, Monday-Sunday

Benefits

Endpoint Backup allows you to protect the valuable data on employee devices, mitigate data loss and data breaches and restore lost data quickly.

- Round out your data protection strategy as corporate data is held on employee devices and left unprotected.
- Mitigate data loss and data breaches
- Protect data while maximizing network and end user performance
- Ensure uptime and reduce complexity and cost
- Reduce risk from ransomware, lost or stolen devices and user error

Simple deployment and management

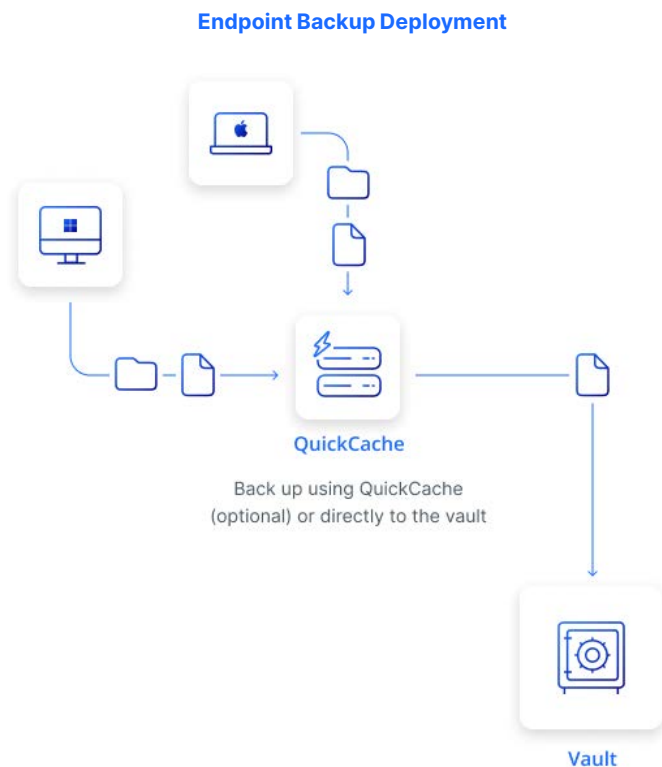

Advanced administration

Central management and control features help simplify deployment, while flexible configuration options reduce the impact of backup workloads traveling over the network.

How to deploy Endpoint Backup

Endpoint Backup makes it easy to deploy the software across dozens, hundreds and even thousands of endpoints with our silent deployment technology.

- Step 1: Establish a centrally managed vault in Carbonite's Microsoft Azure-hosted vault.
- Step 2: Silently deploy software on computers and laptops.
- Step 3: Back up distributed devices using the local cache or directly to the vault.
- Step 4: Recover or remotely wipe data if a device is lost or stolen.

Advanced security features

Endpoint Backup protects laptops from internal and external threats. It includes advanced features like device tracking, legal hold, SSO and 2FA options and more.

Endpoint Backup operates a control framework based on adherence to SOC 2 Type 2 standards. Endpoint Backup supports compliance with several industry-standard regulations, including HIPAA, FERPA, GLBA and GDPR.

High performance

Endpoint Backup gives your organization the necessary tools to intelligently manage global bandwidth usage with minimal disruption to network performance.

"Having a centralized copy of our remote employees' endpoint data reduces our fears of lost and stolen endpoints impacting our business."

Martin Polaszewski, Sr. Network Engineer, Viskase

Endpoint Backup is part of your cyber resilient solution. Being cyber resilient means being able to withstand and quickly recover from cyberattacks and accidental data loss. OpenText Cybersecurity provides a full range of cybersecurity solutions to keep your data secure and protected, so you can live without worry.

Supported platforms

Endpoint client:

- Windows 7 and later
- Windows 11 on Arm-based devices
- macOS 10.12 and later

Endpoint vault:

- Microsoft Azure
- Windows Server 2022, 2019, 2016, 2012 R2
- SQL Server 2022, 2019, 2016, 2014, 2012
