

# Webroot® Business Endpoint Protection

A proactive, predictive,  
and multi-layered  
approach to security

**Cyberattacks are growing against  
small to medium-sized business (SMB) targets**

of cyberattacks  
now target SMBs²

of SMBs have no incident  
response plan in place²

of malware is unique to  
a single PC and polymorphic  
(and thus can't be detected by  
signature-based antivirus solutions)

It takes **287 days** on average  
to respond to and contain  
a data breach³

*Without an effective prevention solution,  
pain points for SMBs are amplified*

**Webroot Endpoint Protection:**  
Establishing multi-vector, next-gen,  
high-efficacy threat prevention

A secure and resilient distributed cloud architecture  
that enables layered user and device defenses:

Multi-vector protection  
against malicious files,  
scripts, exploits and URLs

Remote management,  
policies and control

Precision monitoring  
and the ability to roll back  
auto-restores and infected files

The power to manage clients  
across sites and secure  
users across all stages of a  
cyberattack with effective,  
real-time protection

Propriety technology to  
monitor, journal and  
contain infections even  
when an endpoint is offline

Based on the foundation  
of the real-world, contextual  
BrightCloud Threat  
Intelligence Platform

**Webroot Endpoint Protection  
gives you:**

- ✓ Advanced behavioral and machine learning-based threat detection – no signatures
- ✓ Maximum speed and efficiency
- ✓ The benefits of a cloud-based architecture: Data from tens of millions of sensors correlated and analyzed continuously to provide universal protection
- ✓ Highly automated, low-cost operation
- ✓ Real-time threat intelligence and protection, both online and offline

**What Makes Webroot Endpoint Protection Different**

Fully remote  
endpoint management  
and control

Superior efficacy  
against zero-day  
threats

Hassle-free deployment

Purpose-built  
solutions for  
managed service  
providers and SMBs

*We strive to choose the most well-designed, MSP-ready  
solutions that are going to protect our customers. We have  
identified Webroot as a great product that meets the needs  
of all of our customers, so we employ it across the board.*

Jerel Howland, Director of Technical Solutions, Mytech Partners

[Additional success stories](#)

**Awards and accolades**

Among peers, Webroot Endpoint Protection offers

Fastest Installation time  
(3.5 seconds)\*

~6x faster  
scheduled scan time\*

~ 50% less memory  
usage for initial scan\*

**PASSMARK™  
SOFTWARE**

\*Based on the performance  
benchmark study by PassMark  
including Webroot and Nine  
other peer endpoint  
protection solutions

No matter their size, businesses need  
reliable endpoint security that can stop  
modern attacks. And since most  
companies are subject to some form of  
compliance and privacy regulations,  
protection for endpoints is 100% necessary  
to help businesses avoid hefty fines and  
damage to their reputation due to a  
security breach.
