Carbonite® Data Protection Platform

Comprehensive protection for all types of business data

The Carbonite Data Protection Platform is a comprehensive approach for reducing or eliminating the high cost and disruptive effects of data loss and downtime. From endpoint backup to multi-cloud migration, Carbonite helps businesses achieve critical strategic objectives for recovery time, recovery point and system availability.

Carbonite® Server

All businesses need a straightforward, complete backup and recovery solution that keeps data secure, minimizes downtime and protects company operations. Carbonite® Server is a simple, all-in-one, server backup and recovery solution for physical, virtual and legacy systems. Deployed in your onsite environment, it stores copies on a local target, in the cloud or to a secondary location. Optional onsite hardware and cloud failover allow you to hit your RTO targets. The software and cloud service are fully integrated and backed by the award-winning Carbonite support team.

Carbonite® Endpoint

Carbonite® Endpoint is a comprehensive, automatic backup solution for all your endpoint devices and the data that resides on them. Carbonite® Endpoint simplifies the administrative tasks associated with deploying protection across an entire organization, no matter the size, distribution or sophistication of the environment.

With Carbonite® Endpoint, organizations can better protect valuable data on employee devices, mitigate data loss and data breach, and restore lost data quickly. It provides businesses with an enhanced data protection strategy through best-in-class endpoint protection to reduce risk that results from ransomware, user errors and lost or stolen devices.

Carbonite® Backup for Microsoft 365

Carbonite Backup for Microsoft 365 offers comprehensive backup of all Microsoft 365 applications to ensure protection and, if needed, recovery of data. Central management allows you to create granular policies for what should be protected and run backups up to four times per day, with flexible retention options. You'll be able to restore granular data, including mailboxes, conversations, projects and more, as well as perform site-level rollback to easily restore lost data. This cloud-to-cloud backup solution helps businesses deploy the same robust protection for cloud apps as they do for physical, on-prem devices and data.

Carbonite® Migrate

Carbonite® Migrate quickly and easily migrates physical, virtual and cloud workloads with minimal risk and near-zero downtime. The simple, automated solution allows you to avoid lock-in to a specific hypervisor, cloud vendor or piece of hardware. The streamlined process automates and consolidates numerous steps into just a few

Data protected
250+ petabytes

simple tasks, reducing the amount of work necessary to reach your migration goals. Once the replication is complete, you can test the target environment before cutover without impacting production workloads or users.

Carbonite® Recover

Carbonite® Recover is a DRaaS offering that securely replicates critical systems from a primary environment to the Carbonite cloud. This ensures an up-to-date secondary copy is available for failover at any moment, minimizing downtime as well as costs. You pay for what you use, when you use it, not for idle resources.

Carbonite® Availability

Carbonite® Availability enables IT organizations to maintain the highest availability of their Windows and Linux servers by using continuous replication that maintains a secondary copy without taxing the primary system or network bandwidth. With support for physical, virtual or cloud source systems or target environments, Carbonite® Availability is a comprehensive option for organizations with mixed IT environments.

Carbonite® Safe

Automatically back up computers and servers to the cloud with options to protect files locally for faster recovery. Carbonite® Safe is designed to scale from consumers and home offices to small businesses with one or more servers.

About Carbonite and Webroot

Carbonite and Webroot, OpenText companies, harness the cloud and artificial intelligence to provide comprehensive cyber resilience solutions for businesses, individuals, and managed service providers. Cyber resilience means being able to stay up and running, even in the face of cyberattacks and data loss. That's why we've combined forces to provide endpoint protection, network protection, security awareness training, and data backup and disaster recovery solutions, as well as threat intelligence services used by market leading technology providers worldwide. Leveraging the power of machine learning to protect millions of businesses and individuals, we secure the connected world. Carbonite and Webroot operate globally across North America, Europe, Australia, and Asia. Discover cyber resilience at carbonite.com and webroot.com.
