Carbonite software development kit (SDK)

Automate and integrate Carbonite high availability and migration solutions

The Carbonite software development kit (SDK) is a collection of Application Programming Interfaces (APIs), documentation and code samples that allow developers to rapidly build solutions that integrate with Carbonite products.

The Carbonite SDK allows you to program virtually anything you see in the console. It offers a wide range of possibilities for custom automation or integration of services.

Sample use cases

The SDK allows systems integrators, cloud providers, managed services providers, ISVs and businesses using Carbonite solutions to quickly integrate functionality with other applications. The SDK is used for a variety of purposes, including:
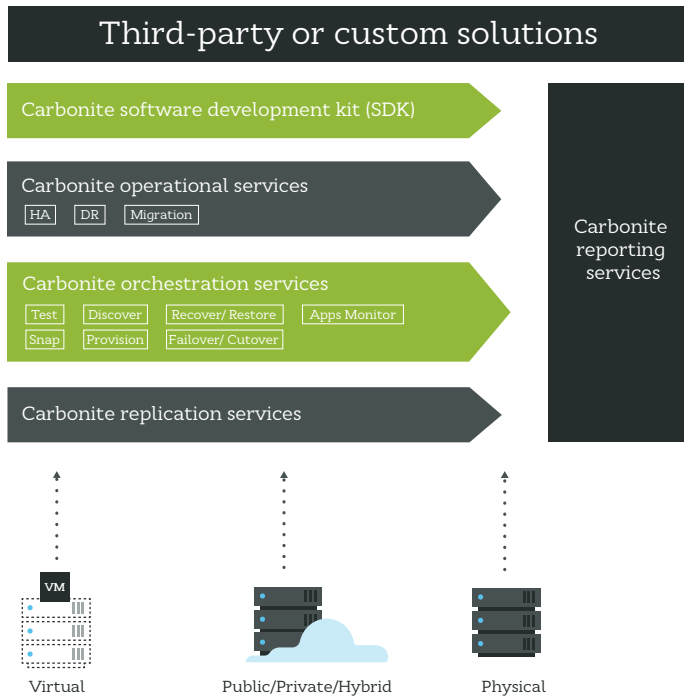

- Orchestration of large scale migrations
- Creation of a custom disaster recovery as a service (DRaaS) solution
- Development of an automated disaster recovery testing application
- Design of a custom console for managing Carbonite solutions
- Addition of high availability and migration capabilities to a firewall appliance
- Automated reporting of statistics into a custom dashboard
- Integration of status into a third-party enterprise management console

Relevant products

- Carbonite® Availability
- Carbonite® Migrate

Here's how it works

The SDK is included with Carbonite solutions and does not require a separate license. Developers have access to an online portal containing API documentation, sample code, how-to tips and forums. The SDK includes SOAP APIs, PowerShell commands and RESTful APIs. Developers are free to choose the programming language and APIs of their choice in order to automate tasks or implement their own software using Carbonite high availability and migration services.

Third-party or custom solutions

Carbonite software development kit (SDK)

Carbonite operational services
HA DR Migration

Carbonite orchestration services
Test Discover Recover/Restore Apps Monitor
Snap Provision Failover/Cutover

About Carbonite and Webroot

Carbonite and Webroot, OpenText companies, harness the cloud and artificial intelligence to provide comprehensive cyber resilience solutions for businesses, individuals, and managed service providers. Cyber resilience means being able to stay up and running, even in the face of cyberattacks and data loss. That's why we've combined forces to provide endpoint protection, network protection, security awareness training, and data backup and disaster recovery solutions, as well as threat intelligence services used by market leading technology providers worldwide. Leveraging the power of machine learning to protect millions of businesses and individuals, we secure the connected world. Carbonite and Webroot operate globally across North America, Europe, Australia, and Asia. Discover cyber resilience at carbonite.com and webroot.com.
