

Rapidly evaluate exploration prospects in the upcoming Gulf of America lease sale

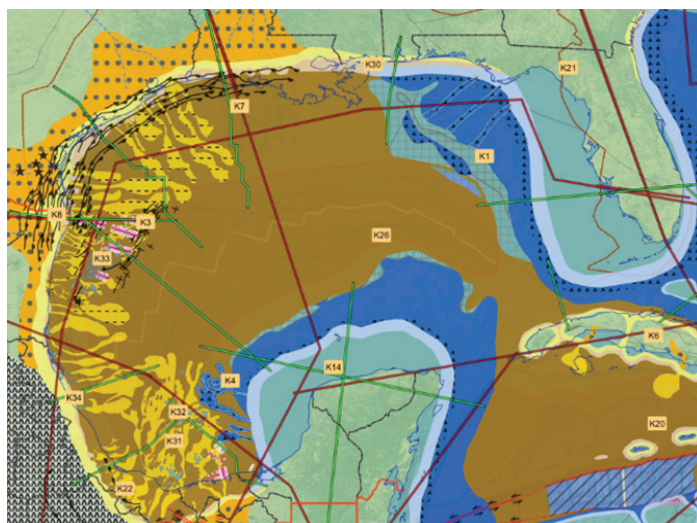

Neftex® Predictions software is the definitive tool kit for subsurface evaluation and risk assessment, delivering intuitive access to geoscience context, knowledge, and insight through the unique application of state-of-the-art geoscience, frameworks, and technologies to deliver high quality content to support your workflows.

In the Gulf of America, where exploration is shifting toward deeper and more technically challenging stratigraphy, Neftex® provides a critical advantage. Its standardized and audited multidisciplinary geoscience portfolio integrates subsurface data, interpretations, and models into a globally consistent framework. This framework—anchored in tectonics, sequence stratigraphy, paleoclimate, and depth structure—enables prediction and definition of subsurface potential, even in underexplored or structurally complex areas.

Play based exploration in the Gulf of America: Subsurface and petroleum insights through consistent data collection and interpretation

Neftex® Predictions delivers a full suite of tools for play-based exploration based on the integration and interpretation of its diverse datasets. These outputs are built on the greatest level of global, regional and basin scale understanding through the combination of industry-leading science, technologies, and workflows. In Addition to the geoscience datasets included with Neftex® Predictions, all of these tools are developed within stratigraphic framework and are delivered to efficiently enhance exploration workflows and can be blended with proprietary datasets.

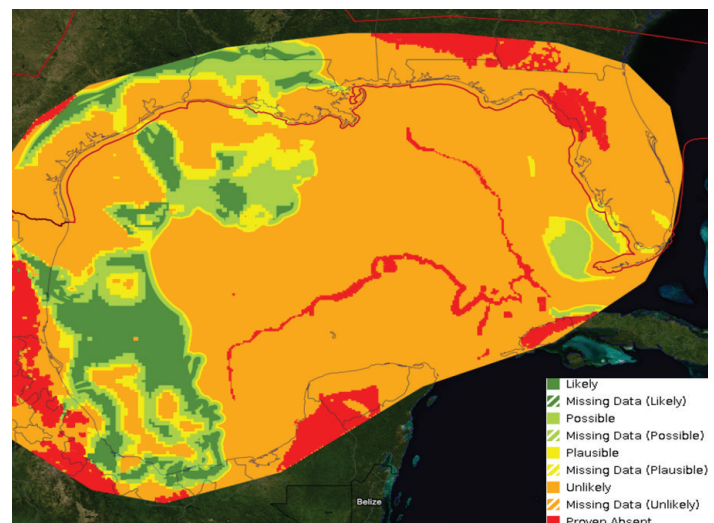

Comprehensive play understanding – Proven and underexplored concepts

A global database of proven and potential plays presented on an interactive dashboard and summary schematics along discrete lines of section capture the structure, stratigraphy, and present-day oil and gas windows to identify proven and speculative plays that are linked to the Neftex® global database of analog, and frontier play concepts.

In the Gulf of America, where deeper stratigraphy may hold the key to future exploration success, Neftex® helps uncover underexplored intervals and emerging play concepts. Accompanying this understanding is a suite of play fairway studies covering key oil and gas provinces, highlighting subsurface risk and prospectivity.

Expedite exploration concept identification, validation and testing

A full suite of tools delivers deep insights into the characteristics of petroleum systems, encompassing rock and fluid organic geochemistry, rock properties, burial modeling and geothermal gradient and heat flow. Unique combinations of cutting-edge Earth System Science models integrate topographic, drainage, tidal, and paleoclimatic models to produce results that assess the likelihood of occurrence and quality of petroleum system elements with outputs tailored for play-based exploration. A cloud-hosted application for on-demand play fairway evaluation, driven by the insights of Neftex® Predictions, brings together geoscience content and sophisticated

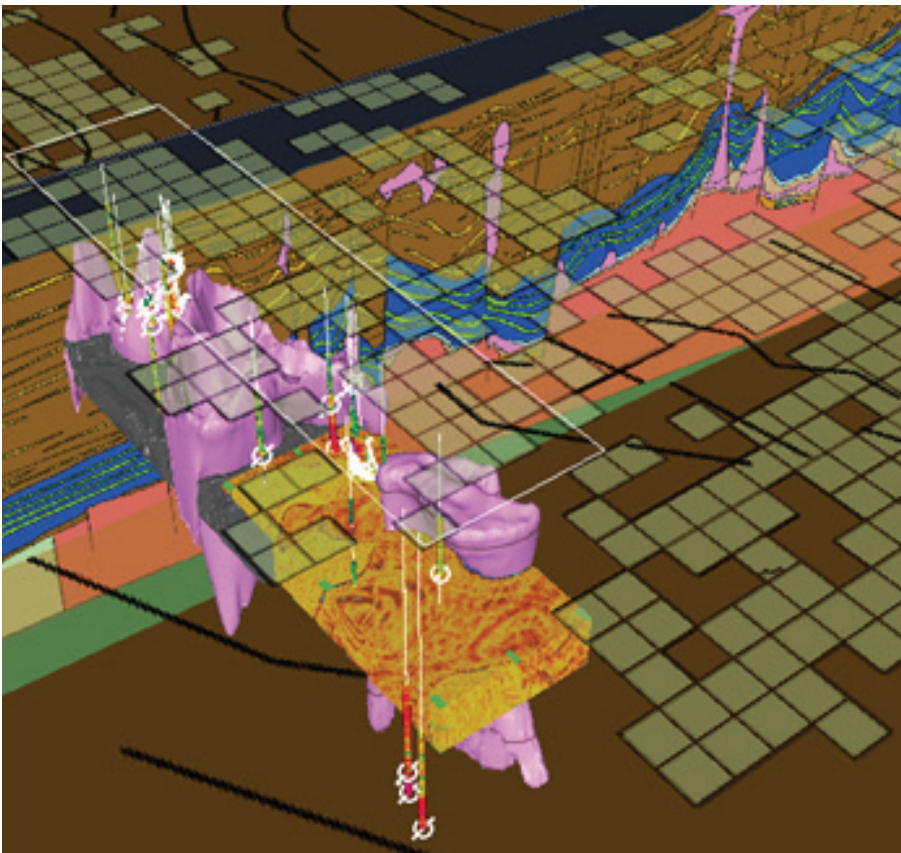

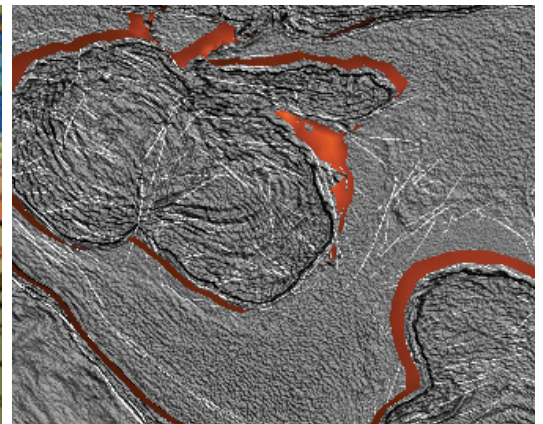

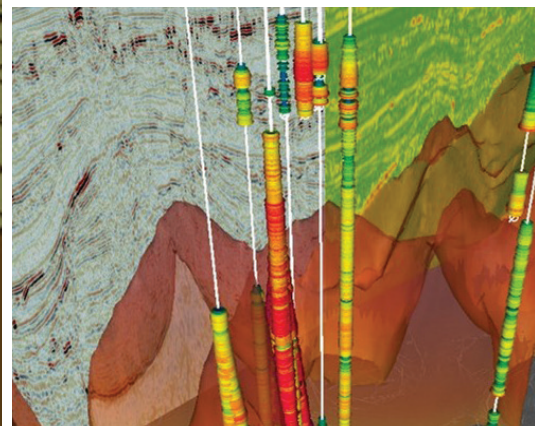

geo-processing techniques on the cloud to execute a consistent basin screening workflow. Assisting the synthesis of regional geoscience interpretations into chance maps provides more time for testing new ideas, considering multiple scenarios, and making better decisions.

In addition to play-based exploration, companies can also access Landmark's AI/ML powered tools for rapid subsurface interpretation

These include:

- Automated salt detection
- Automated horizon and fault interpretation
- High-resolution imaging for complex structures

For more information, contact your local Halliburton representative or visit us on the web at www.halliburton.com

Sales of Halliburton products and services will be in accord solely with the terms and conditions contained in the contract between Halliburton and the customer that is applicable to the sale.
