

Drive Smarter Pharmacy Decisions with Peer-Led Clinical Support

How RxBenefits’ pharmacist-led independent clinical management helps improve outcomes

Hospital pharmacy leaders are no strangers to the pressures of rising costs, clinical complexity, and limited resources. With expensive specialty drugs and GLP-1s driving pharmacy spend – and operational capacity stretched thin – there’s a growing need for data, insights, and support to help relieve the burden.

With independent clinical management that delivers actionable insights, expert peer review, and targeted interventions, RxBenefits can be a powerful extension of your team. Conducted by clinicians – not algorithms – and focused on the high-cost drug categories that have the greatest impact, it can help reduce inappropriate prescribing and ensure better outcomes.

Consider that*:

*Based on RxBenefits Book of Business, 2024
**IQVIA Institute, The Use of Medicines in the U.S. 2022

How clinical management makes your pharmacy plan more efficient:

- Ensures the plan is administered in line with its goals
- Enforces appropriate dosing and use based on FDA-approved guidelines
- Flags inappropriate or potentially unsafe prescriptions before they’re filled

≠ Not all clinical programs are created equally.

Traditional PBMs without independent clinical management use algorithms to make coverage decisions on high-cost brand and specialty drugs. As a result, inappropriate or off-label prescriptions may slip through, driving up costs and member risk.

What’s more, these decisions often occur without input from the people who know the pharmacy best: **pharmacists.**

How independent clinical management keeps pharmacy at the table

RxBenefits’ independent clinical model supports hospitals and health systems with actionable insights, peer-led decision-making, and high-touch support, keeping pharmacists directly engaged in employee benefits decisions. Our reviews focus on what matters most: the small number of claims creating the biggest financial and clinical impact.

This approach provides clarity and support to ensure

-  appropriate medication use
-  prioritized outcomes
-  controlled costs
