

Disposal Guidance for Aeroseal Sealants

Disposing of Aeroseal sealants (DuctSeal, DuctSeal LT and AeroBarrier X1) requires careful consideration to ensure environmental safety and compliance with local regulations.

- **Unused or Expired Sealant**
Typically, unused or expired sealant can be disposed of at general waste facilities, as it is not considered hazardous.
- **Fully Cured and Dried Sealant**
If the sealant is fully cured, dried and no longer chemically active, it may be disposed of as general construction waste; always verify with local waste management authorities.

Avoid pouring sealants down drains or into water sources. Use protective equipment when handling these substances to prevent skin and eye contact.

Proper disposal not only maintains environmental integrity but also ensures the safety of those handling these compounds. Refer to the product's Safety Data Sheet (SDS) for hazard details. If you need specific assistance filling out a hazard checklist for the local waste management company, contact us at support@aeroseal.com.
